

RF Exposure Info

This modular transmitter complies with applicable RF exposure requirements. Its measured peak power is 0.8 dBm. Calculating EIRP = -29.2 dBW = 1.2 mw. For a distance of 20 cm, power density is $1.2/4\pi \cdot 20^2 = 2.4 \cdot 10^{-7}$ mW/cm². Further, the module is intended to be installed inside a host device which provides additional isolation from the user.
