# **Test Report**

| Report No. :<br>Applicant: | CQASZ20231001783E-01<br>Creek Wearable Technology Co., Ltd.            |
|----------------------------|--|
| Address of Applicant:      | 910, 5A office building, Longguang Jiuzuan, Longhua District, Shenzhen |
| Equipment Under Test (     | EUT):  |
| Product:                   | CW Watch S5  |
| Model No.:                 | CW Watch S5  |
| Test Model No.:            | CW Watch S5  |
| Brand Name:                | N/A  |
| FCC ID:                    | 2BBYH-C1022  |
| Standards:                 | 47 CFR Part 15, Subpart C  |
| Date of Receipt:           | 2023-10-07   |
| Date of Test:              | 2023-10-07 to 2023-10-16   |
| Date of Issue:             | 2023-11-02   |
| Test Result :              | PASS*  |
|                            |  |

\*In the configuration tested, the EUT complied with the standards specified above.

Remark:

The tested sample(s) and the sample information are provided by the client.

Tx: In this whole report Tx (or tx) means Transmitter.

Rx: In this whole report Rx (or rx) means Receiver.

RF: In this whole report RF means Radiated Frequency.

CH: In this whole report CH means channel.

Volt: In this whole report Volt means Voltage.

Temp: In this whole report Temp means Temperature.

Humid: In this whole report Humid means humidity.

Press: In this whole report Press means Pressure.

N/A: In this whole report not application

# 4.2 General Description of EUT

| Product Name:  | CW Watch S5  |  |  |
|--|--|--|--|
| Model No.:   | CW Watch S5  |  |  |
| Test Model No.:  | CW Watch S5  |  |  |
| Trade Mark:  | N/A  |  |  |
| Software Version:  | KrikiOS V0.02  |  |  |
| Hardware Version:  | CW05-MAINBORADV1.1   |  |  |
| Operation Frequency:                                     | 2402MHz~2480MHz  |  |  |
| Bluetooth Version:                                       | V5.3   |  |  |
| Modulation Technique:                                    | Frequency Hopping Spread Spectrum(FHSS)                      |  |  |
| Modulation Type:   | GFSK, π/4DQPSK, 8DPSK  |  |  |
| Transfer Rate:   | 1Mbps/2Mbps/3Mbps  |  |  |
| Number of Channel: 79                                    |  |  |  |
| Hopping Channel Type: Adaptive Frequency Hopping systems |  |  |  |
| Product Type:  | □ Mobile   |  |  |
| Test Software of EUT:                                    | FCC  |  |  |
| Antenna Type:  | Metal frame antenna  |  |  |
| Antenna Gain:  | -3.9dBi  |  |  |
| Power Supply:  | Li-ion battery: DC 3.85V 300mAh, Charge by DC 5V for adapter |  |  |
| Simultaneous Transmission                                | ☐ Simultaneous TX is supported and evaluated in this report. |  |  |
|  | ⊠ Simultaneous TX is not supported.                          |  |  |

| Operation F | Operation Frequency each of channel |         |           |         |           |         |           |

| 16          | 2418MHz                             | 36      | 2438MHz   | 56      | 2458MHz   | 76      | 2478MHz   |
| 17          | 2419MHz                             | 37      | 2439MHz   | 57      | 2459MHz   | 77      | 2479MHz   |
| 18          | 2420MHz                             | 38      | 2440MHz   | 58      | 2460MHz   | 78      | 2480MHz   |
| 19          | 2421MHz                             | 39      | 2441MHz   | 59      | 2461MHz   |         |           |

### Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

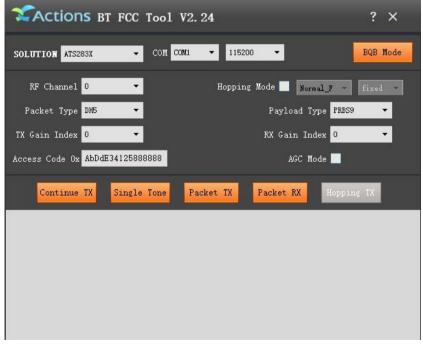

| Channel             | Frequency |
|---------------------|-----------|
| The Lowest channel  | 2402MHz   |
| The Middle channel  | 2441MHz   |
| The Highest channel | 2480MHz   |

# 4.3 Additional Instructions

### Run Software:

### 4.4 Test Environment

| Operating Environment | Operating Environment:  |  |  |
|-----------------------|---|--|--|
| Temperature:          | 25 °C   |  |  |
| Humidity:             | 54% RH  |  |  |
| Atmospheric Pressure: | 1009mbar  |  |  |
| Test Mode:            | Use test software to set the lowest frequency, the middle frequency and the highest frequency keep transmitting of the EUT. |  |  |

# 4.5 Description of Support Units

The EUT has been tested with associated equipment below.

| Description | Manufacturer | Model No. | Remark | Supplied |
|-------------|--------------|-----------|--------|----------|
| Adapter     | MI           | 1         | 1      | CQA      |

# 4.6 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate.

The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities.

The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16 - 4 "Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements" and is documented in the **Shenzhen Huaxia Testing Technology Co., Ltd.** quality system acc. to DIN EN ISO/IEC 17025.

Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

| No. | Item                               | Uncertainty        |
|-----|------------------------------------|--------------------|
| 1   | Radiated Emission (Below 1GHz)     | 5.12dB             |
| 2   | Radiated Emission (Above 1GHz)     | 4.60dB             |
| 3   | Conducted Disturbance (0.15~30MHz) | 3.34dB             |
| 4   | Radio Frequency                    | 3×10 <sup>-8</sup> |
| 5   | Duty cycle                         | 0.6 %              |
| 6   | Occupied Bandwidth                 | 1.1%               |
| 7   | RF conducted power                 | 0.86dB             |
| 8   | RF power density                   | 0.74               |
| 9   | Conducted Spurious emissions       | 0.86dB             |
| 10  | Temperature test                   | 0.8°C              |
| 11  | Humidity test                      | 2.0%               |
| 12  | Supply voltages                    | 0.5 %              |
| 13  | Frequency Error                    | 5.5 Hz             |

Hereafter the best measurement capability for CQA laboratory is reported:

### 4.7 Test Location

All tests were performed at:

Shenzhen Huaxia Testing Technology Co., Ltd.

1F., Block A of Tongsheng Technology Building, Huahui Road, Dalang Street, Longhua District, Shenzhen, China

# 4.8 Test Facility

The test facility is recognized, certified, or accredited by the following organizations: **IC Registration No.: 22984-1** 

The 3m Semi-anechoic chamber of Shenzhen Huaxia Testing Technology Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing

The test facility is recognized, certified, or accredited by the following organizations:

### CNAS (No. CNAS L5785)

CNAS has accredited Shenzhen Huaxia Testing Technology Co., Ltd. Shenzhen Branch EMC Lab to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

### • A2LA (Certificate No. 4742.01)

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 4742.01.

#### • FCC Registration No.: 522263

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration No.:522263

### 4.9 Abnormalities from Standard Conditions

None.

### 4.10 Other Information Requested by the Customer

None.

Note:

The temporary antenna connector is soldered on the PCB board in order to perform conducted tests and this temporary antenna connector is listed in the equipment list.

# 5 Test results and Measurement Data

# 5.1 Antenna Requirement

| Standard requirement: | 47 CFR Part 15C Section 15.203 /247(c) |
|-----------------------|--|
| otaniaana roquirontin |  |

#### 15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

### 15.247(b) (4) requirement:

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### EUT Antenna:

The antenna is Metal frame antenna.

The connection/connection type between the antenna to the EUT's antenna port is: permanently attachment.

This is either permanently attachment or a unique coupling that satisfies the requirement.

# 5.2 Conducted Emissions

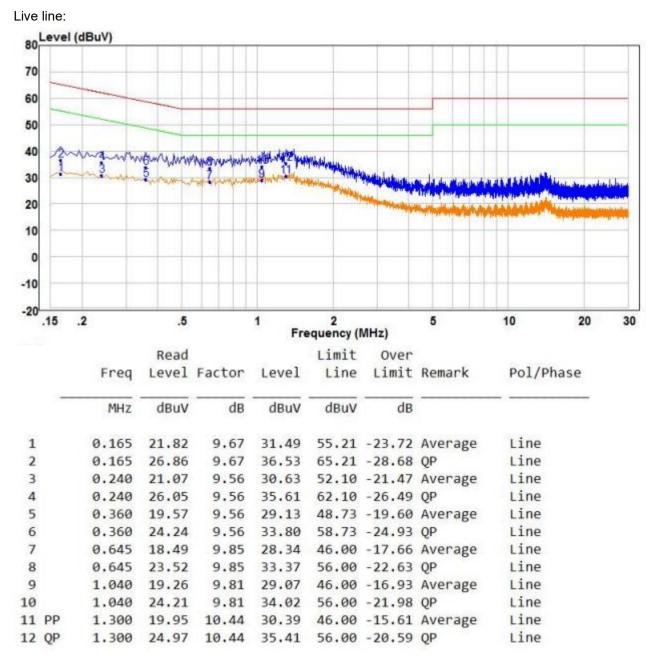

| <br>Conducted Emissio |  |  |   |  |
|-----------------------|--|--|---|--|
| Test Requirement:     | 47 CFR Part 15C Section 15.2                     | 207  |   |  |
| Test Method:          | ANSI C63.10: 2013                                |  |   |  |
| Test Frequency Range: | 150kHz to 30MHz                                  |  |   |  |
| Limit:                |  | Limit (c   | Limit (dBuV)  |  |

| Final Test Mode:       | Through Pre-scan, find the DH5 of data type and GFSK modulation at the lowest channel is the worst case.<br>Only the worst case is recorded in the report. |
| Test Voltage:          | AC 120V/60Hz   |
| Test Results:          | Pass   |

#### **Measurement Data**

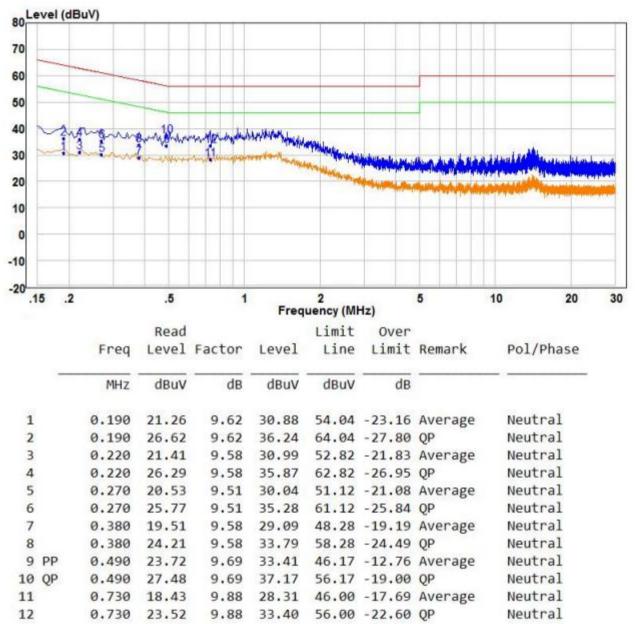

Remark:

- 1. The following Quasi-Peak and Average measurements were performed on the EUT:
- 2. Final Test Level =Receiver Reading + LISN Factor + Cable Loss.
- 3. If the Peak value under Average limit, the Average value is not recorded in the report.

Neutral line:

Remark:

1. The following Quasi-Peak and Average measurements were performed on the EUT:

2. Final Test Level =Receiver Reading + LISN Factor + Cable Loss.

3. If the Peak value under Average limit, the Average value is not recorded in the report.

# 5.8 Band-edge for RF Conducted Emissions

| Test Requirement:      | 47 CFR Part 15C Section 15.247 (d)  |
|------------------------|---|
| Test Method:           | ANSI C63.10:2013  |
| Test Setup:            | Spectrum Analyzer<br>E.U.T<br>Non-Conducted Table<br>Ground Reference Plane<br>Remark: Offset=cable loss+ attenuation factor.   |
| Limit:                 | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. |
| Exploratory Test Mode: | Hopping and Non-hopping transmitting with all kind of modulation and all kind of data type  |
| Final Test Mode:       | Only the worst case is recorded in the report.  |
| Test Results:          | Pass  |

# 5.9 Spurious RF Conducted Emissions

| Test Requirement:      | 47 CFR Part 15C Section 15.247 (d)  |
|------------------------|---|
| Test Method:           | ANSI C63.10:2013  |
| Test Setup:            | Spectrum Analyzer<br>E.U.T<br>Non-Conducted Table<br>Ground Reference Plane   |
|                        | Remark: Offset=cable loss+ attenuation factor.  |
| Limit:                 | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. |
| Exploratory Test Mode: | Non-hopping transmitting with all kind of modulation and all kind of data type  |
| Final Test Mode:       | Through Pre-scan, find the DH5 of data type is the worst case of GFSK modulation type, 2-DH5 of data type is the worst case of $\pi$ /4DQPSK modulation type, 3-DH5 of data type is the worst case of 8DPSK modulation type.  |
| Test Results:          | Pass  |
