

EC25-AFX and EC25-AFX MINIPCIE are all LTE modules. They support the same frequency bands, use the same chipset and share the same software & hardware design. The main difference is on the carrier board.  
EC25-AFX MINIPCIE makes up of EC25-AFX module and PCIe transferred board. The transferred board switches EC25-AFX module to follow PCI Express Mini Card 1.2 standard connector protocol. No any other internal changes in EC25-AFX module. Two models are identical in interior structure and components, and just connector interface is different for the marketing requirement.

Sincerely,
