

FCC ID: QDS-BRCM1002

The Broadcom WLAN MiniPCI card is intended to be used in laptops/ notebooks.
This application is seeking approval as card / Module.

The card will be installed in one of the bottom compartments of newer laptops and doesn't have its own antenna.

The laptop has to be prepared by the OEM to include antennas and antenna cables.
Therefore no customer installation is possible.

The application contains OEM information, which provide all the information, which have to be included in the manual of the OEM's laptop.

The application is filed with SAR data for an example laptop application as well as an example manual. However these data are only representative for the DELL laptop with this specific antenna and antenna location, (which is not part of this application).
