Subject: **Declaration of Compliance with RF exposure requirement**
CSI Wireless Inc
AssetLink 250 / AL250

We hereby indicate that the product:

AssetLink 250 / AL250

is considered to be a mobile transceiver and operated such that humans are normally separated from its radiating element by at least 20cm. The operating frequency of the product is below 1.5Ghz. The maximum output power is calibrated at 28dBm. The antenna cable loss is 2.5dB and the antenna gain is 2dBi. Therefore, the effective isotropic radiated power (EIRP) is 0.562 watts, which is less than 1.5 watts. Per section 2.1091(c), this product is therefore exempt from the SAR and RF evaluation.

The device is equipped with a detachable antenna and must not be co-located or operating in conjunction with any other antenna or transmitter.

A statement concerning operating conditions will be found in the user's manual to provide end-users with sufficient information for satisfying RF exposure compliance.

Sincerely,

Mike Znack
Program Manager
CSI Wireless Inc
