

9) Frequency stability:

- a. The voltage stability is typically done for + 15% and only 10% was shown. 2.1055(d)(2).
- b. Measurements should also be provided for just above battery end point.

The test was performed at 10%, just above the battery end point. The test was performed as a hand carried battery powered equipment per 2.1055(d)(2)
