FREQUENCY RANGE LISTINGS FOR CERTIFICATION GRANTS

I. PART 15 UNLICENSED TRANSMITTERS

- 1) List the **center frequency** of the lowest channel tested to the **center frequency** of the highest channel tested for the following operating modes which produce worst-case RF emission characteristics:
 - (1) the widest frequency range
 - (2) the highest power
- 2) grant condition field should include a statement listing all bandwidth modes of operation (e.g., "This device has 20 MHz and 40 MHz bandwidth modes.")
- 3) For U-NII devices operating under the old rules in the 5470-5725 MHz band, do not list frequencies that include the TDWR band (5600-5650 MHz) (Mater Device Only)

II. LICENSED TRANSMITTERS – GENERAL GUIDANCE

For grants of devices operating in 3GPP LTE modes, listing only the widest measured emission bandwidth for each emission designator (e.g. G7W) and each transmit band [e.g., 27 subpart L (AWS-1)] is permitted according to the following provisions.

- 1) If the mode with the widest measured emission bandwidth also has the highest measured output power, the Form-731 can have a single line per mode and band;
- 2) Multiple Form-731 lines per band are needed for the widest emission bandwidth mode(s) with associated measured output power(s), and the highest measured output power mode with its associated measured narrower emission bandwidth.
