

## WIFI Channel 12 & 13 Declaration Letter

To whom it may concern :

We have declared below the features for FCC equipment authorization with regard to 802.11b/g/n channel 12 & 13 operating capability for FCC ID : PJ5-AX905

Product hardware has the capability to operate on channel 12 & 13 under certain conditions.

The module referenced in this application meets the relevant requirements of 47 CFR Part 15,247 rules under all operating modes. There is no requirement to change power levels to meet these requirements and therefore there is no requirement under KDB 594280 D01 for additional geo-location data.

Channels 1 to 11 are the standard channels use by the module

All other channels are passive scan only and will not enable the transmitter on these channels as standard. The use of the additional channels relies on a WI-FI access point to enable these channels as defined in document KDB 594280 D01, section IV paragraph B.1. and therefore also meets the requirements of Section V paragraph A.1
