# 1. TEST STANDARDS

The tests were performed according to following standards:

FCC Rules Part 15.249: Operation within the bands 902 - 928 MHz, 2400 - 2483.5 MHz, 5725 -5875 MHz. and 24.0 - 24.25 GHz.

ANSI C63.10:2013 : American National Standard for Testing Unlicensed Wireless Devices

CTATE Americ Inssions from Low-Volta Range of 9 kHz to 40GHz ANSI C63.4: 2014: - American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40GHz CTATESTING

# 2. <u>SUMMARY</u>

### 2.1. General Remarks

Date of receipt of test sample		Mar. 27, 2025		
				17
Testing commenced on	No. of Concession, Name	Mar. 27, 2025	(Outed	CTAY
Testing concluded on	:	Apr. 02, 2025	Come and	

2.2. Product Description	
Name of EUT	Quadcopter
Model Number	E99
Power Rating	DC 4.5V From battery
Hardware version:	V1.0
Software version:	V1.0
Sample ID:	CTA250327001-1# (Engineer sample) CTA250327001-2# (Normal sample)
Operation frequency	2420MHz~2460MHz
Modulation	GFSK
Antenna Type	PCB antenna
Antenna Gain	0.17 dBi

### 2.3. Equipment Under Test

#### Power supply system utilised

Power supply system utilised         Power supply voltage         :       0         230V / 50 Hz       0         120V / 60Hz
0 12 V DC 0 24 V DC
Other (specified in blank below)

# 2.4. Short description of the Equipment under Test (EUT)

This is a Quadcopter.

For more details, refer to the user's manual of the EUT.

#### 2.5. EUT configuration

#### The following peripheral devices and interface cables were connected during the measurement:

supplied by the manufacturer

 $\bigcirc$  - supplied by the lab

CTATESTING 1 GA CTATESTING

#### 2.6. EUT operation mode

The Applicant use Key to control the EUT for staying in continuous transmitting and receiving mode for testing .There is 41 channels provided to the EUT.

## 3. TEST ENVIRONMENT

#### 3.1. Address of the test laboratory

#### Shenzhen CTA Testing Technology Co., Ltd.

Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao'an District, Shenzhen, China

#### 3.2. Test Facility

The test facility is recognized, certified, or accredited by the following organizations: FCC-Registration No.: 517856 Designation Number: CN1318

Shenzhen CTA Testing Technology Co., Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

Industry Canada Registration Number. Is: 27890 CAB identifier: CN0127 The Laboratory has been registered by Certification and Engineering Bureau of Industry Canada for radio TATEST equipment testing.

#### A2LA-Lab Cert. No.: 6534.01

Shenzhen CTA Testing Technology Co., Ltd. has been listed by American Association for Laboratory Accreditation to perform electromagnetic emission measurement.

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010.

#### 3.3. Environmental conditions

3.3. Environmental cond	itions	
During the measurement the env	ironmental conditions were	within the listed ranges:
Radiated Emission:		CTA L
Temperature:	23 ° C	C III
Humidity:	48 %	
ING		
5 Atmospheric pressure:	950-1050mbar	]

# CTATES AC Main Conducted testing:

#### 3.4. Summary of measurement results

FCC Part 15.249(a)	Field Strength of Fundamental	PASS
FCC Part 15.209	Spurious Emission	PASS
FCC Part 15.209	Band edge	PASS
FCC Part 15.215(c)	20dB bandwidth	PASS
FCC Part 15.207	Conducted Emission	N/A
FCC Part 15.203	Antenna Requirement	PASS

#### 3.5. Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to TR-100028-01" Electromagnetic compatibility and Radio spectrum Matters (ERM); Uncertainties in the measurement of mobile radio equipment characteristics; Part 1" and TR-100028-02 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 2 " and is documented in the Shenzhen CTA Testing Technology Co., Ltd. quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device. Hereafter the best measurement capability for Shenzhen CTA Testing Technology Co., Ltd. :

Test	Range	Measurement Uncertainty	Notes
Radiated Emission	9KHz~30MHz	3.02 dB	(1)
Radiated Emission	30~1000MHz	4.06 dB	(1)
Radiated Emission	1~18GHz	5.14 dB	(1)
Radiated Emission	18-40GHz	5.38 dB	(1)
Conducted Disturbance	0.15~30MHz	2.14 dB	(1)
Output Peak power	30MHz~18GHz	0.55 dB	(1)
Power spectral density	1	0.57 dB	(1)
Spectrum bandwidth	/	1.1%	(1)
Radiated spurious emission (30MHz-1GHz)	30~1000MHz	4.10 dB	(1)
Radiated spurious emission (1GHz-18GHz)	1~18GHz	4.32 dB	(1)
Radiated spurious emission (18GHz-40GHz)	18-40GHz	65.54 dB	(1)

(1) This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence CTA TESTIN level using a coverage factor of k=2.

# 4. TEST CONDITIONS AND RESULTS

#### 4.1. AC Power Conducted Emission

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

- 1, The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10.
- 2, Support equipment, if needed, was placed as per ANSI C63.10.
- 3, All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10.
- 4. If a EUT received DC power from the USB Port of Notebook PC, the PC's adapter received power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5, All support equipments received AC power from a second LISN, if any.
- 6, The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7, Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.

#### AC Power Conducted Emission Limit

For intentional device, according to § 15.207(a) AC Power Conducted Emission Limits is as following :

	Limit (	dBuV)
Frequency range (MHz)	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50
* Decreases with the legenithm of the freque		Course of the second

Decreases with the logarithm of the frequency.

#### TEST RESULTS

The EUT is powered by the Battery, so this test item is not applicable for the EUT. GTA CTATESTING

#### 4.2. Radiated Emission and Band Edges

#### **TEST CONFIGURATION**

(A) Radiated Emission Test Set-Up, Frequency Below 30MHz

#### (B) Radiated Emission Test Set-Up, Frequency below 1000MHz

#### (C) Radiated Emission Test Set-Up, Frequency above 1000MHz

#### TEST PROCEDURE

- 1. The EUT was placed on a turn table which is 0.8m above ground plane when testing frequency range 9 KHz -25GHz.
- Maximum procedure was performed by raising the receiving antenna from 1m to 4m and 2. rotating the turn table from 0°C to 360°C to acquire the highest emissions from EUT.
- And also, each emission was to be maximized by changing the polarization of receiving 3. antenna both horizontal and vertical.
- 4. Repeat above procedures until all frequency measurements have been completed.
- The EUT minimum operation frequency was 26MHz and maximum operation frequency 5. was 1910MHz.so radiated emission test frequency band from 9KHz to 25GHz.
- 6. The distance between test antenna and EUT as following table states:

Test Frequency range	Test Antenna Type	Test Distance
9KHz-30MHz	Active Loop Antenna	3
30MHz-1GHz	Ultra-Broadband Antenna	3
1GHz-18GHz	Double Ridged Horn Antenna	3
18GHz-25GHz	Horn Anternna 🧼 🥂	1

#### **Field Strength Calculation**

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

	FS = KA + AF + CL + AG		A Discontinue	
	Where FS = Field Strength		CL = Cable Attenuation Factor (Cable Loss)	
	RA = Reading Amplitude		AG = Amplifier Gain	
	AF = Antenna Factor			
ra	nsd=AF +CL-AG	-16		
	5.VF*			
) A	ATION LIMIT			

Transd=AF +CL-AG

#### **RADIATION LIMIT**

According 15.249, the field strength of emissions from intentional radiators operated within 2400MHz-2483.5 MHz shall not exceed 94dBµV/m (50mV/m):

FCC PART 15.249(d) Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209, whichever is the lesser attenuation. TATESTING

In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a)

	463	Rac	diated emission limits		
	Frequency (MHz)	Distance (Meters)	Radiated (dBµV/m)	Radiated (µV/m)	
	0.009-0.49	3	20log(2400/F(KHz))+40log(300/3)	2400/F(KHz)

	1.705-30	3	20log(30)+ 40log(30/3)	30	
	30-88	3	40.0	100	
	88-216	3	43.5	150	
	216-960	3	46.0	200	
	Above 960	3	54.0	500	
CTA	TEST RESULTS Remark:	TESTING			

.. ..

## TEST RESULTS

- Remark:
- This test was performed with EUT in X, Y, Z position and the worse case was found when EUT in X 1. position.
- 2. GFSK were tested at Low, Middle, and High channel and recorded worst mode at Low channel
- Radiated emission test from 9 KHz to 10th harmonic of fundamental was verified, and no emission found 3. except system noise floor in 9 KHz to 30MHz and not recorded in this report.

Note:

Emission level (dBuV/m) = Meter Reading+ antenna Factor+ cable loss- preamp factor. 1)

Margin value = Limits-Emission level. 2)

-- Mean the PK detector measured value is below average limit. 3)

The other emission levels were very low against the limit. 4)

RBW1MHz VBW3MHz Peak detector is for PK value; RBW 1MHz VBW10Hz Peak detector is for AV 5) CTA TESTING value.

#### 4.3. 20dB Bandwidth Measurement

#### **TEST PROCEDURE**

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 30KHz RBW and 300KHz VBW.

The 20dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus CTA TESTING CTATE 20dB.

#### LIMIT

N/A

#### **TEST RESULTS**

Modulation	Channel	20dB bandwidth (MHz)	Result	
CTATE	Low	1.200		
GFSK	Mid	1.187	PASS	
and the second sec	High	1.252		NG
Note: 1.The test res	sults including the cal	ble loss.	CTATES	

#### 4.4. Antenna Requirement

#### Standard Applicable

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.247 (c), if transmitting antennas of directional gain greater than CTATE 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

The maximum gain of antenna was 0.17 dBi. Remark:The anter Remark: The antenna gain is provided by the customer, if the data provided by the customer is not accurate, Shenzhen CTA Testing Technology Co., Ltd. does not assume any responsibility. CTATES
