

Tune Up Procedure

- 1 Each product is programmed with the pre-defined RF parameters.
- 2 Each product RF power level is measured to ensure the power level not exceeding the target power level, in a fully calibrated setup.
- 3 The user has no possibility to change these settings later on.
- 4 The Maximum Transmit Power for production units as below:

P-sensor off

Tolerance (dB): ± 1		RF Output Power (dBm)	
Band	Mode	Target	Max. tune-up power
LTE Band 4	QPSK	22.0	23.0
LTE Band 13	QPSK	22.0	23.0

P-sensor on

Tolerance (dB): ± 1		RF Output Power (dBm)	
Band	Mode	Target	Max. tune-up power
LTE Band 4	QPSK	16.0	17.0
