Vx670 User Manual Clarifications

Vx670 User Manual is adopting the standard VeriFone's user manual for payment terminal, which includes many communication variants such as GPRS, CDMA and WLAN. However, CDMA variant will not be equipped for Vx670 and only GPRS and WLAN terminals will be embedded in this version of manual. Co-transmission between WLAN and GPRS will not happen.

Vx670 will be sold to B2B market, where we will fully support our customers for the installations and instructions. In addition, our customers are very familiar of what application is embedded in the device, and which can also be clearly distinguished by the product label on the bottom of the device. For WLAN device, the product number is M267-510-XX-XXX with the MAC number printed on the label. For GPRS, the product number is M267-530-XX-XXX with the IMEI number printed on the label. Different communication variants will have different FCC IDs though they use the same users manual.

Should you have any questions or comments regarding this matter, please have my best attention.

Sincerely yours,
