

RF Exposure

The Motion Computing LE1600 series tablet is portable and will operate with a separation distance less than 20 cm between the radiating element and the user.

The operating environment of the device must be described. The following categories are identified by FCC:

- 1) Portable – Devices that are operated with a separation distance less than 20 cm. between the radiating element and the user. These devices are usually held to the head or worn on the body. These devices usually require a SAR (Specific Absorption Rate) evaluation and report.
- 2) Mobile – Devices that can be re-located but maintains a minimum separation distance of 20 cm. between the radiating element and the user. These devices usually require a MPE (Maximum Permissible Exposure) evaluation. This evaluation is performed by CKC Services if it is deemed necessary.
- 3) Fixed – Devices with their antennas mounted outdoors on a permanent, fixed structure.
