# FCC Test Report

Test report On Behalf of Winner Wave Limited For Pocket Model No.: BC-1

### FCC ID: 2ADFS-POCKET-BC-1

Prepared For : Winner Wave Limited

Unit 2003 Cheong Tai Commercial Building 287-289 Reclamation Street Kowloon, Hong Kong

Prepared By : Shenzhen HUAK Testing Technology Co., Ltd.

1-2/F., Building B2, Junfeng Zhongcheng Zhizao Innovation Park, Heping, Fuhai Street, Bao'an District, Shenzhen, Guangdong, China

| Date of Test:   | Oct. 16, 2023 ~ Oct. 24, 2023 |
|-----------------|-------------------------------|
| Date of Test:   | Oct. 26, 2024 ~ Nov. 18, 2024 |
| Date of Report: | Nov. 18, 2024                 |
| Report Number:  | HK2410306426-1E               |

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com

# 1. Test Result Summary

## 1.1. Test Procedures and Results

| Requirement  | CFR 47 Section           | Result |
|--|--------------------------|--------|
| Antenna requirement                                | §15.203                  | PASS   |
| AC Power Line Conducted<br>Emission                | §15.207                  | PASS   |
| Maximum Conducted<br>Output Power                  | §15.407(a)               | PASS   |
| 6dB Emission Bandwidth                             | §15.407(e)               | N/A    |
| 26dB Emission Bandwidth&<br>99% Occupied Bandwidth | §15.407(a)               | PASS   |
| Power Spectral Density                             | §15.407(a)               | PASS   |
| Band edge  | §15.407(b)/15.209/15.205 | PASS   |
| Radiated Emission                                  | §15.407(b)/15.209/15.205 | PASS   |
| Frequency Stability                                | §15.407(g)               | PASS   |

Note:

1. PASS: Test item meets the requirement.

2. Fail: Test item does not meet the requirement.

3. N/A: Test case does not apply to the test object.

4. The test result judgment is decided by the limit of test standard.

## 1.2. Information of the Test Laboratory

Shenzhen HUAK Testing Technology Co., Ltd. Add.: 1-2/F., Building B2, Junfeng Zhongcheng Zhizao Innovation Park, Heping, Fuhai Street, Bao'an District, Shenzhen, Guangdong, China

Testing Laboratory Authorization:

A2LA Accreditation Code is 4781.01. FCC Designation Number is CN1229. Canada IC CAB identifier is CN0045. CNAS Registration Number is L9589.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com

FICATION

## 1.3. Measurement Uncertainty

The reported uncertainty of measurement y  $\pm$  U, where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

| No.   | Item                          | MU      |
|-------|-------------------------------|---------|
| nig 1 | Conducted Emission            | ±2.71dB |
| 2     | RF power, conducted           | ±0.37dB |
| 3     | Spurious emissions, conducted | ±0.11dB |
| 4     | All emissions, radiated(<1G)  | ±3.90dB |
| 5.00  | All emissions, radiated(>1G)  | ±4.28dB |
| 6     | Temperature                   | ±0.1°C  |
| 7     | Humidity                      | ±1.0%   |

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com.

## 2.4. Description of Test Setup

Results of the following pages. The worst case is Z position.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com.

# 2.5. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| ltem    | Equipment | Trade Mark | Model/Type No. | Specification   | Remark     |
|---------|-----------|------------|----------------|---|------------|
| 1       | Pocket    | EZCast     | BC-1           | N/A   | EUT        |
| ຸ 2     | USB Cable | N/A        | N/A            | Length:1.2m   | Accessory  |
| 3       | Laptop    | N/A        | TP00096A       | Input: DC 20V,<br>2.25A/3.25A                         | Peripheral |
| 4       | Adapter   | N/A        | N/A            | Input: 100-240V,<br>50/60Hz, 0.5A<br>Output: 5VDC, 2A | Peripheral |
| TING    | -mile     |            | TING           | NG TUNG   | TING       |
| HUAKTED | HUAKTES   | HUAK       | HUAKTEL        | HUAKTES   | HUAKTED    |

Note:

- 1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
- 2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.

3. For conducted measurements (Output Power, 26dB Bandwidth and 99% Occupied Bandwidth, Power Spectral Density, Spurious Emissions), the antenna of EUT is connected to the test equipment via temporary antenna connector, the antenna connector is soldered on the antenna port of EUT, and the temporary antenna connector is listed in the Test Instruments.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com.

TEL: +86-755 2302 9901 FAX: +86-755 2302 9901 E-mail: service@cer-mark.com

# 3. Genera Information

# 3.1. Test Environment and Mode

| Temperature:          | 25.0 °C   |
|-----------------------|-----------|
| Humidity:             | 56 % RH   |
| Atmospheric Pressure: | 1010 mbar |

#### Test Mode:

| Engineering mode: | Keep the EUT in continuous transmitting by select channel and modulations |
|-------------------|---|
|                   |   |

The sample was placed 0.8m/1.5m for blow/above 1GHz above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com.

TEL: +86-755 2302 9901 FAX: +86-755 2302 9901 E-mail: service@cer-mark.com

CATION

We have verified the construction and function in typical operation. All the test modes were carried out with the EUT in transmitting operation, which was shown in this test report and defined as follows:

Per-scan all kind of data rate in lowest channel, and found the follow list which it was worst case.

| Mode          | Data rate |  |  |  |  |
|---------------|-----------|--|--|--|--|
| 802.11a       | 6 Mbps    |  |  |  |  |
| 802.11n(HT20) | MCS0      |  |  |  |  |
| 802.11n(HT40) | MCS0      |  |  |  |  |

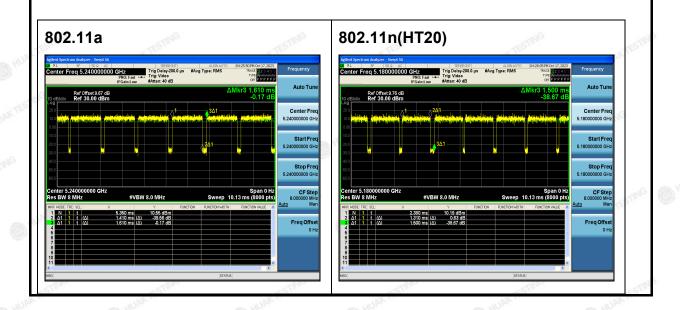

#### **Final Test Mode:**

| Operation mode: | Keep the EUT in continuous transmitting with modulation |
|-----------------|---|
|                 |   |

Mode Test Duty Cycle:

|     | 162           | 192        | 62.                       | 100         |

# 4.6. Band Edge

## 4.6.1. Test Specification

| Test Requirement: | FCC CFR47 Part 15E Section 15.407  |
|-------------------|--|
| Test Method:      | ANSI C63.10 2013   |
| Limit:            | <ul> <li>For band I&amp;II&amp;III: E[dBµV/m] = EIRP[dBm] + 95.2=68.2 dBµV/m, for EIRP(dBm)= -27dBm</li> <li>For transmitters operating in the 5.725-5.85 GHz band:</li> <li>All emissions shall be limited to a level of -27 dBm/MHz at 75 MHz or more above or below the band edge increasing linearly to 10 dBm/MHz at 25 MHz above or below the band edge, and from 25 MHz above or below the band edge increasing linearly to a level of 15.6 dBm/MHz at 5 MHz above or below the band edge increasing linearly to a level of 15.6 dBm/MHz at 5 MHz above or below the band edge.</li> <li>For band IV(5715-5725MHz&amp;5850-5860MHz): E[dBµV/m] = EIRP[dBm] + 95.2=78.2 dBµV/m, for EIRP(dBm)= -27dBm;</li> <li>For band IV(other un-restricted band):E[dBµV/m] = EIRP[dBm] + 95.2=68.2 dBµV/m, for EIRP(dBm)= -27dBm</li> </ul> |
| Test Setup:       | BS.2-00.2 dBpV/m, for Liftr (dBiff)27dBiff   |
| Test Mode:        | Transmitting mode with modulation  |
| Test Procedure:   | <ul> <li>1. The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</li> <li>3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> </ul>   |

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. Remark: Factor = Cable loss + Antenna factor + Attenuator – Preamplifier; Level = Reading + Factor; Margin = Level-Limit.

Remark:

1. If the PK measured levels comply with average limit, then the average level were deemed to com ply with

average limit.

2. In restricted bands of operation, the spurious emissions below the permissible value more than 2 0dB.

3. The amplitude of spurious emissions which are attenuated by more than 20dB below the permissible value has no need to be reported.

FIF

| Test Procedure: | 6. If the emission level of the EUT in peak mode was<br>10dB lower than the limit specified, then testing could<br>be stopped and the peak values of the EUT would be<br>reported. Otherwise the emissions that did not have<br>10dB margin would bere-tested one by one using peak,<br>quasi-peak or average method as specified and then<br>reported in a data sheet. |

Remark: Factor = Cable loss + Antenna factor + Attenuator – Preamplifier; Level = Reading + Factor; Margin = Level-Limit.

#### Remark:

(1) Measuring frequencies from 1 GHz to the 40 GHz.

(2) "F" denotes fundamental frequency; "H" denotes spurious frequency; "E" denotes band edge frequency.
(3) \* denotes emission frequency which appearing within the Restricted Bands specified in provision of 15.205, then the general radiated emission limits in 15.209 apply.

(4) The emissions are attenuated more than 20dB below the permissible limits are not recorded in the report.

(5) The IF bandwidth of EMI Test Receiver between 30MHz to 1GHz was 120KHz, 1 MHz for measuring above 1 GHz, below 30MHz was 10KHz.

(6) When the test results of Peak Detected below the limits of Average Detected, the Average Detected is not need completed. For example: Top Channel at Fundamental 73.16dBuV/m(PK Value) <93.98(AV Limit), at harmonic 53.20 dBuV/m(PK Value) <54 dBuV/m(AV Limit), the Average Detected not need to completed.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com

# 4.8. Frequency Stability Measurement

## 4.8.1. Test Specification

| Test Requirement: | FCC Part15 Section 15.407(g)   |
|-------------------|--|
| Test Method:      | ANSI C63.10: 2013  |
| Limit:            | The frequency tolerance shall be maintained within the band of operation frequency over a temperature variation of 0 degrees to 35 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C.  |
| Test Setup:       | Spectrum Analyzer     EUT       AC/DC Power supply   |
| Test Procedure:   | The EUT was placed inside the environmental test<br>chamber and powered by nominal AC/DC voltage. b.<br>Turn the EUT on and couple its output to a spectrum<br>analyzer. c. Turn the EUT off and set the chamber to the<br>highest temperature specified. d. Allow sufficient time<br>(approximately 30 min) for the temperature of the<br>chamber to stabilize. e. Repeat step 2 and 3 with the<br>temperature chamber set to the lowest temperature. f.<br>The test chamber was allowed to stabilize at +20<br>degree C for a minimum of 30 minutes. The supply<br>voltage was then adjusted on the EUT from 85% to<br>115% and the frequency record.  |
| Test Result:      | PASS   |
| Remark:           | N/A Official |

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. # 4.9. Antenna Requirement

#### **Standard Applicable**

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

#### Refer to statement below for compliance.

The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited. Further, this requirement does not apply to intentional radiators that must be professionally installed.

#### Antenna Connected Construction

The antenna used in this product is a Iron sheet antenna, which permanently attached. It conforms to the standard requirements. The directional gains of antenna used for transmitting is 2.22dBi.

#### WIFI ANTENNA

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only.
