

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On the left, a piece of electronic equipment (likely a spectrum analyzer or receiver) sits on a light-colored wooden table. A red cable connects it to a power line interface unit (PLI) on the floor. The PLI is connected to a power outlet on the wall. To the right, a large, light-colored wooden board is positioned vertically, with a small black component mounted on its top edge. The background is a plain grey wall.
Radiation Emission View (Below 30MHz)	 A photograph showing a radiation emission test setup. In the center, a white rectangular object (the test item) is placed on a stand. The room is lined with white, square-shaped electromagnetic interference (EMI) shields. In the foreground, a metal frame structure is visible, and the floor is marked with yellow and black diagonal stripes. The lighting is bright, creating a strong reflection on the floor.
