3.2 TEST PROCEDURE

- a. The EUT was placed 0.8 m above the horizontal ground plane with the EUT being connected to the power mains through a line impedance stabilization network (LISN).
 All other support equipment were powered from an additional LISN(s).
 The LISN provides 50 Ohm/50uH of impedance for the measuring instrument.
- b. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle to keep the cable above 40 cm.
- c. Excess I/O cables that are not connected to a peripheral shall be bundled in the center.
 The end of the cable will be terminated, using the correct terminating impedance.
 The overall length shall not exceed 1 m.
- d. The LISN is spaced at least 80 cm from the nearest part of the EUT chassis.
- e. For the actual test configuration, please refer to the related Item – EUT TEST PHOTO.

NOTE:

- (1) In the results, each reading is marked as Peak, QP or AVG per the detector used.
 BW=9 kHz (6 dB Bandwidth)
- (2) All readings are Peak unless otherwise stated QP or AVG in column of Note. Both the QP and the AVG readings must be less than the limit for compliance.

4.2 TEST PROCEDURE

- The measuring distance of 3 m shall be used for measurements. The EUT was placed on the top of a rotating table 0.8 meter above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.(below 1GHz)
- The measuring distance of 3 m shall be used for measurements. The EUT was placed on the top of a rotating table 1.5 meter above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.(above 1GHz)
- The height of the equipment or of the substitution antenna shall be 0.8 m or 1.5 m, the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights find the maximum reading (used Bore sight function).
- The receiver system was set to peak and average detect function and specified bandwidth with maximum hold mode when the test frequency is above 1GHz.
- The initial step in collecting radiated emission data is a receiver peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.
- All readings are Peak unless otherwise stated QP in column of Note. Peak denotes that the Peak reading compliance with the QP Limits and then QP Mode measurement didn't perform. (below 1GHz)
- All readings are Peak Mode value unless otherwise stated AVG in column of Note. If the Peak Mode Measured value compliance with the Peak Limits and lower than AVG Limits, the EUT shall be deemed to meet both Peak & AVG Limits and then only Peak Mode was measured, but AVG Mode didn't perform. (above 1GHz)
- For the actual test configuration, please refer to the related Item – EUT TEST PHOTO.

4.3 TEST SETUP

9 kHz to 30 MHz

The diagram illustrates a near-field measurement setup. A transmitting antenna (EUT) is positioned on a table that is 0.8 m high. The distance between the EUT and the receiving antenna is 3 m. The receiving antenna is mounted on a vertical stand that can be adjusted to a height of 1 m to 1.4 m. The setup is located within a chamber with absorbers on the walls and a ground plane. The receiver is connected to an amplifier (Amp.).

The diagram illustrates the experimental setup for measuring the radiation pattern of a planar antenna array. The setup is divided into three main horizontal regions: **Absorbers** at the top, a central measurement area, and **Absorbers** at the bottom. The **Ground Plane** is located at the bottom of the central area. The **EUT** (Equipment Under Test) is positioned on the left side of the **Ground Plane**. The distance from the **EUT** to the **Absorbers** is 3 m. The **EUT** is mounted on a stand with a height of 0.8 m. The **Absorbers** are represented by a shaded rectangular block with a height of 0.3 m. The **Receiver** and **Amp.** (Amplifier) are located at the bottom right, connected to the antenna array. The antenna array is mounted on a vertical pole with a height of 1-4 m. The distance from the **Ground Plane** to the antenna array is 1 m. The antenna array is connected to the **Receiver** and **Amp.** via a cable. The **Receiver** and **Amp.** are connected to the **Ground Plane** via a common ground connection.
