Subject: Attestation of Maximum Duty Cycle of SARA-R410M
u-blox AG
FCC ID: XPY2AGQN4NNN

To Whom It May Concern:

Operation of the SARA-R410M in the BI LC-880 Tracker is controlled by programmed firmware in the product. The maximum duty cycle is fixed by the hard-coded firmware. There is no capability provided that would allow a user or service personnel to alter this maximum duty cycle.

Sincerely,

Rod Ward
Director, Product and Sustaining Engineering
BI Incorporated
