	EMC Test Report for the BlackBerry® smartphone Model RHC161LW (STR100-2), RHD131LW (STR100-1)	
Test Report No. RTS-6063-1502-15A	Date of Test February 23 to 27, 2015	FCC ID: L6ARHC160LW, L6ARHD130LW IC: 2503A-RHC160LW

a) AC POWERLINE CONDUCTED EMISSIONS

The AC Powerline conducted emissions were measured using the test procedure outlined in CISPR Recommendation 22 through a 50 Ohm Line Impedance Stabilization Network (LISN), which was inserted in the power line to the equipment to provide the specified impedance for measurements. The EUT was placed on a nonconductive wooden table, 80 cm high that was positioned 40 cm from a vertical ground plane. The RF output of the network was connected to an EMI receiver system with characteristics that duplicate those of the receiver specified in CISPR Publication 16.

BlackBerry[®] smartphone was in battery charging mode. The input voltage was 120 V, 60 Hz.

The following test configurations were measured for model RHC161LW (STR100-2):

Test Configuration	Operating Mode(s)	Charger + Accessories
1	PCS 1900, Idle, Charging and Video Playback	Fixed Blade Charger + Headset + USB Cable
2	LTE FDD 2, Idle, Charging and Audio Playback	Alt. Headset + Alt. USB Cable + Laptop
3	UMTS FDD II HSDPA+, Idle, Charging and Audio Playback	Alt. Fixed Blade Charger + Alt. Headset + Alt. USB Cable
4	UMTS FDD IV DC HSDPA, Idle, Charging and Video Playback	Fixed Blade Charger + Alt. Headset + USB Cable
5	FM, Idle, Charging and Audio Playback	Alt. Fixed Blade Charger + Headset + Alt. USB Cable

The sample EUT's AC Powerline conducted emissions were compared with respect to the FCC CFR 47 Part 15.107, Class B Limit, and IC ICES-003, 6.1. The sample EUT had a worst case test margin of 11.13 dB below the QP limit at 0.483 MHz using the QP detector in Test Configuration 3.

Test Report No. RTS-6063-1502-15A	Date of Test February 23 to 27, 2015	FCC ID: L6ARHC160LW, L6ARHD130LW IC: 2503A-RHC160LW	

The following test configurations were measured for model RHD131LW (STR100-1):

Test Configuration	Operating Mode(s)	Charger + Accessories
6	PCS 1900, Idle, Charging and Video Playback	Fixed Blade Charger + Headset + USB Cable
7	UMTS FDD II, Idle, Charging and Audio Playback	Alt. Fixed Blade Charger + Alt. Headset + Alt. USB Cable

The sample EUT's AC Powerline conducted emissions were compared with respect to the FCC CFR 47 Part 15.107, Class B Limit, and IC ICES-003, 6.1. The sample EUT had a worst case test margin of 11.79 dB below the QP limit at 2.319 MHz using the QP detector in Test Configuration 6.

Measurement Uncertainty ±3.2 dB

To view the test data/plots, see APPENDIX 1.

b) RADIATED UNINTENTIONAL SPURIOUS EMISSIONS

The radiated unintentional spurious emissions from the EUT were measured using the methods outlined in CISPR Recommendation 22. The EUT was placed on a nonconductive Styrofoam table, 80 cm high that was positioned on a remote controlled turntable. The test distance used between the EUT and the receiving antenna was three metres. The turntable was rotated to determine the azimuth of the peak emissions. Then the emissions were maximized by elevating the antenna in the range of 1 to 4 metres. The maximum emission level was recorded. The radiated emissions were measured up to the fifth harmonic of the highest frequency of the band tested. Both the horizontal and vertical polarizations of the emissions were measured.

The measurements were done in a semi-anechoic chamber (SAC) below 1 GHz and a modified semi-anechoic chamber (modified SAC) with floor absorbers above 1 GHz. The SAC's FCC registration number is **778487** and the Industry Canada (IC) file number is **2503B-1**. The modified SAC's FCC registration number is **959115** and the IC file number is **2503C-1**.

The EUT was configured and operated to produce the maximum radiated emissions while still keeping within BlackBerry's specifications.
