Letter Stating Differences In Models

AP5657 Strand Radio System

AP5857I - Internal antenna version for point-to-multipoint operation. 28 dBm EIRP max, TX band of 5799 to 5823 MHz.

AP5857E - External antenna for point-to-point operation. 46 dBm EIRP max, TX band of 5799 to 5817 MHz.

The two models use the same PCB, software, diplexer, and cover. The diplexer is tuned differently between the two units. The software is factory set to distinguish between the two versions, and limits the frequency range that may be selected to those shown above.

FCC ID: OPPAP5857
