6. Radiation Spurious Emission

6.1.1. Test Specification

Test Requirement:	FCC Part2 Section 2.1053
Test Method:	KDB935210 D03 Signal booster Measurements v04r04
Limit:	-13dBm; For equipment operating in the frequency bands 746-756 MHz and 777-787 MHz, The e.i.r.p. in the band 1559-1610 MHz shall not exceed -70 dBW/MHz for wideband signal and -80 dBW for discrete emission with bandwidth less than 700 Hz.
Test setup:	 Figure 10 – Radiated spurious emissions test and instrumentation setup
Test Procedure:	- Place the EUT on an OATS or semi-anechoic chamber turntable 3 m from the receiving antenna. - Connect the EUT to the test equipment as shown in Figure 10 beginning with the uplink output (donor) port. - Set the signal generator to produce a CW signal with the frequency set to the center of the operational band under test, and the power level set at PIN as determined from measurement results per 7.2. - Measure the radiated spurious emissions from the EUT from the lowest to the highest frequencies as specified in § 2.1057. Maximize the radiated emissions by using the procedures described in ANSI C63.4. - Capture the peak emissions Test Plotss using a peak detector with Max-Hold for inclusion in the test report. Tabular data is acceptable in lieu of spectrum analyzer Test Plotss. - Repeat 7.12c) through 7.12e) for all uplink and downlink operational bands.

Test results:

PASS
