Attestation Letter for Low Power Indoor Client Module Approval

FCC ID: A3LWCF933M

We, Samsung Electronics Co Ltd attest that this device under FCC ID: A3LWCF933M complies with device protocol requirements and operational restrictions: for indoor client 6XD.

- a. Contention-based protocol, as demonstrated in the test report, is permanently embedded in the module and is not host-dependent.
- b. The device will only associate and connect with a low-power indoor access point or subordinate device and never directly connect to other client devices.
- c. This device will always initiate transmission under the control of a low-power indoor AP or subordinate except for brief transmissions before joining a network. These short messages will only occur if the client has detected an indoor AP or subordinate operating on a channel. These brief messages will have a time-out mechanism such that if it does not receive a response from an AP it will not continually repeat the request.
- d. Transmissions will be lower or equal to the power advertised by the indoor low-power access point or subordinate and never above the maximum output power allowed by the FCC grant for equipment class 6XD.
- e. This device does not have its own direct internet connection.

Furthermore, we fully understand this device is prohibited for control of or communications with unmanned aircraft systems, including drones.

For any questions, please contact me at your convenience.
