LETTER OF ATTESTATION

November 22, 2019

Federal Communications Commission
7435 Oakland Mills Road
Columbia, Maryland 21046

To Whom it May Concern:
We attest to the following:

Per FCC 15.407(c), the device will automatically discontinue transmission in case of either absence of information to transmit or operational failure.

This is done via the device utilizing the 802.11 MAC protocol in its communication with other modules. The 802.11 MAC provides for transmission only when information is present to transmit. When there is no information to transmit, no packets will be scheduled for transmission and the RF transmit circuitry will remain off. In the case that operational failure is detected, the module will be rebooted and transmission will cease until the processor verifies normal operation

Sincerely,

Joe Marcinkowski
Engineering Program Manager
