## 1. Overview

### 1.1 Scope of application

This requirement, provided \_Antenna technical requirements and material requirements specifications for IDW 18 products.

This requirement applies to \_IDW18 Antenna selection, testing and acceptance of the products.

### 1.2 Project basic information

Antenna name:	<b>IDW18</b>
Antenna band:	BT: 2400-2500MHZ
Antenna material:	FPC antenna
Antenna version:	V2

## 2. Technical index requirements

### 2.1 Introduction of test items and equipment

inventory	test item	equipment
S11 parameter	Standing wave ratio, echo loss	network analyzer
Active test	TRP,TIS	Integrated tester, microwave darkroom
Passive test	Gain, efficiency	network analyzer

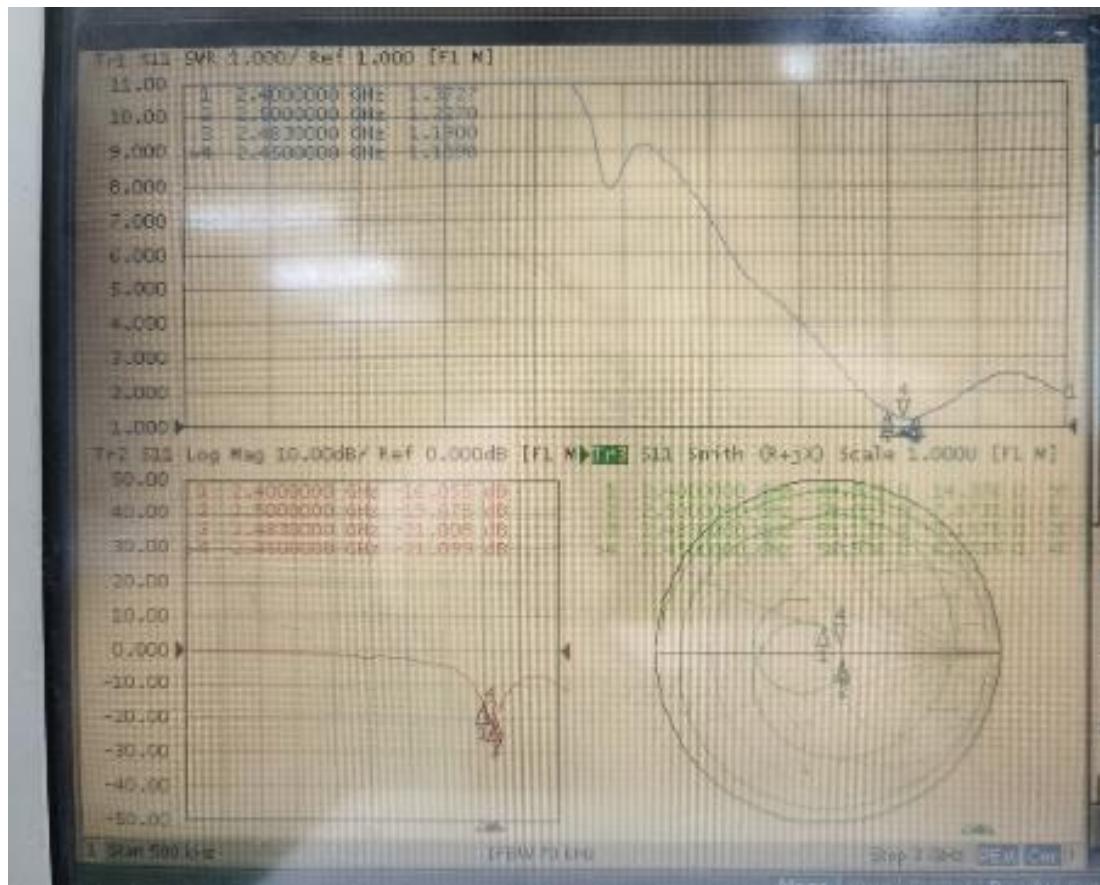

#### 2.2.1 Test instructions

Test tools: Agilent8960 instrument, R & S CMW500, full wave far field ETS dark room, high precision positioning system and its controller and computer with automatic test program

Test environment: temperature  $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$ , humidity  $50\% \pm 15\%$

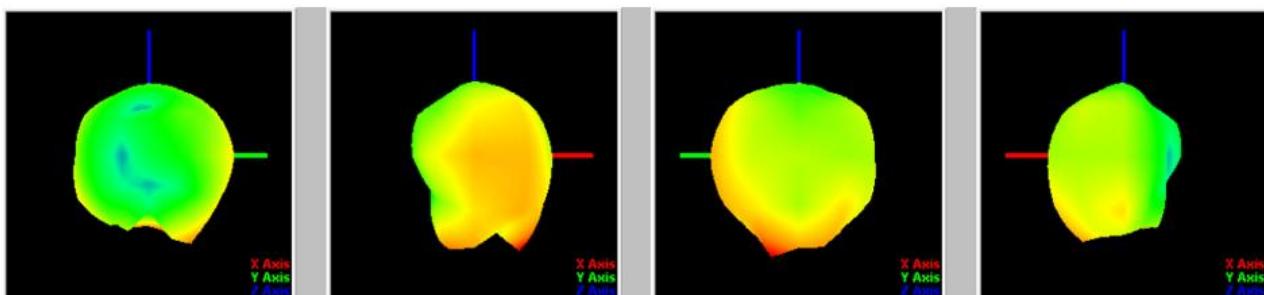

Test method: DUT is fixed in the center of the turntable on the same horizontal line as the center of the horn antenna. The positioning system enables the DUT to rotate in the whole sphere to satisfy the high-precision 3 D positioning. Each RF instrument and turntable controller communicate with the PC with automatic test software through the GPIB interface

## 5. Package schematic diagram

Packaging method diagram	
product name	Antenna components
File details	Carton Size 1: 35 * 25 * 24.5 cm Carton Size 2: Depends on order quantity / quantity
	Boating method
	Total number of binning
Things need to be noticed	
1. Due to the limitation of order quantity, the packing method of each material is the box size according to the total quantity of order or the physical volume	
2. Storage temperature: room temperature	
3. Storage conditions: store them in a cool and dry place	

(This figure is the packaging diagram of this project, subject to the mass production object)
