RF EXPOSURE EVALUATION

1. PRODUCT INFORMATION

| Product Description | Neckband Bluetooth Headphones |
|---------------------|-------------------------------|
| Model Name | W03 |
| FCC ID | 2ASNBW30 |

2. EVALUATION METHOD

According to 447498 D01 General RF Exposure Guidance v05

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f(GHz)}] \le 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR.

Where f(GHz) is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation

3. CALCULATION

 $P_{t} = -0.758dBm = 0.84mW$

The value of the Maximum output power Pt is referred to the test report of the CFR47 §15.247.

The result for RF exposure evaluation SAR=(0.84mW / 5mm) .[$\sqrt{2.402}(\text{GHz})$]= 0.26<3.0 for 1-g SAR and \leq 7.5 for 10-g extremity SAR.

4. CONCLUSION

The SAR evaluation is not required.
