FCC RF EXPOSURE REPORT

KYE SYSTEMS CORP.

Smart keyboard

Model Number: SlimStar 8015

FCC ID: FSUGKZHN

Prepared for:	KYE SYSTEMS CORP.	
	No. 492, Sec. 5, Chongxin Rd., Sanchong Dist., New Taipei City 24160,	
	Taiwan (R.O.C.)	
Prepared By:	EST Technology Co., Ltd.	
	Chilingxiang, Qishantou, Santun, Houjie, Dongguan, Guangdong, China	
Tel: 86-769-83081888-808		

Report Number:	ESTE-R1909097
Date of Test:	Aug. 19~Sep. 16, 2019
Date of Report:	Sep. 18, 2019

EST Technology Co., Ltd Report No. ESTE-R1909097 Page 1 of 3

1. Applicable Standards

FCC Part 2(Section 2.1093)

FCC KD B447498 D01 General RF Exposure Guidance v06

2. Exposure Evaluation of Portable or Mobile Devices

Human exposure to RF emissions from portable devices (47 CFR §2.1093), as defined by the FCC, must be evaluated with respect to the FCC-adopted limits for SAR. Evaluation of mobile devices, as defined by the FCC, may also be performed with respect to SAR limits, but in such cases it is usually simpler and more cost-effective to evaluate compliance with respect to field strength or power density limits. For certain devices that are designed to be used in both mobile and portable configurations similar to those described in 47 CFR §2.1091(d)(4), such as certain desktop phones and wireless modem modules, compliance for mobile configurations is also satisfied when the same device is evaluated for SAR compliance in portable configurations.

MHz mm SAR Test Exclusion Threshold (mW)

SAR Test Exclusion Thresholds for 100 MHz -6 GHz and ≤ 50 mm

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances \leq 50 mm are determined by

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] • [$\sqrt{f(GHz)}$] \leq 3.0 for 1-g SAR and \leq 7.5 for 10-g extremity SAR where

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison

The test exclusions are applicable only when the minimum test separation distance is \leq 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

EST Technology Co., Ltd Report No. ESTE-R1909097 Page 2 of 3

3. Evaluation Results

For 2.4GHz

Ant gain=-0dBi ;so Ant numeric gain=1 Field strength = 74.89 dBuV/m @3m So Pt={ $[10^{(74.89/20)/10^6 \times 3]^2/(30x1)} x1000$ mW = 0.009mW So (0.009 mW/5mm)x $\sqrt{2.480}$ GHz = 0.003 < 3

Note:

- 1. [(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] * [$\sqrt{f(GHz)}$] < 3.0
- 2. SAR Test Exclusion Thresholds is 3.0 for separation distance 5mm. Therefore, SAR test is not required.
