Statement

To Whom It May Concern:

The HZB- A09UCF product shipped to the US market locks the transmit frequency to only FCC approved frequencies. A user or installer is not able to configure any US version product we ship to the US market to a non-US transmit frequency.

In addition to the non-US frequencies, we will also lock out the 5260 MHz channel from the US released product. We will limit the maximum peak power for the 5290 GHz channel turbo mode to 12.13dBm from the system firmware.

Proxim also offer products from the same platform to the European market that can operate in the European bands. To avoid multiple versions of management software and manual, we included contents of frequency selection in the management software and instructions on how to select frequencies in the management manual. However, the frequency selection function is not available in the US version products.

A handwritten signature in black ink, appearing to read "Caroline Yu", followed by a period.
