## LABORATORY - REPORT

**APPLICANT:** ECHO TOYS LTD  
**ADDRESS:** Room 1108 Peninsula Centre  
67 Mody Road  
Tsimshatsui East, Kowloon  
HONG KONG

**DATE OF SAMPLE RECEIVED:** 2002-08-26

**DATE OF TESTING:** 2002-08-28

### DESCRIPTION OF SAMPLE:

Product: Speed Boat  
Product class: Low Power Communication Device Transmitter  
Model number: 90415  
Rating: DC 9V ('6F22' Size Battery x 1)  
Country of Origin: P.R. CHINA

**INVESTIGATIONS REQUESTED:** Measurements to the relevant clauses of F.C.C. Rules and Regulations  
Part 15 Subpart C - Intentional Radiators

**RESULTS:** See the attached test sheets

**CONCLUSIONS** From the measurement data obtained, the tested sample was considered to have COMPLIED with the requirements for the relevant clauses of Federal Communications Commission Rules as specified above.

---

Authorized Signature

**Remark:** Purpose of those tests in this report is to provide the applicant with the necessary test data of their device for the submission to FCC with application for Equipment Authorization under the FCC Equipment Authorization Program. The tests themselves are not Approval Tests

## Summary of Test Results

### Interference Radiation:

Test result: O.K.  
Test data: See attached data sheet

### Interference Voltage:

Test result: N.A.  
Test data: N.A.

### Measurement of Emissions within Band Edges

Test result: O.K.  
Test data: See attached data sheet

| Harm. 17 | 847.62          | < 16                    | < 16                    | 24.3                      | < 40                              | < 40                             | 46.0              |
| Harm. 18 | 897.48          | < 16                    | < 16                    | 25.0                      | < 41                              | < 41                             | 46.0              |
| Harm. 19 | 947.34          | < 16                    | < 16                    | 25.7                      | < 42                              | < 42                             | 46.0              |

**Remark:** All frequencies in the required range have been scanned and only those significant and representative readings are reported above.  
All emissions not reported above are all well below the limit.

**Note:** Unless otherwise indicated, the recorded readings are in quasi-peak values.

## Notes for Radiation Measurement

**1. Measurement facility:**

Measurement facility located at Fanling (Hong Kong), placed on file with the FCC Pursuant to Section 2.948 of the FCC Rules.

**2. Distance between the EUT and measuring antenna:**

3 meters.

**3. Measuring instrumentations:**

Rohde & Schwarz ESVP Test Receiver ( 20 - 1300 MHz ) with a CISPR weighting QP detector, 6 dB bandwidth set at 120 KHz.

In the frequency range above 1000 MHz Spectrum Analyzer FMSM26 and Analyzer Display Unit FSA-D are used, bandwidth set at 100 kHz.

**4. Measuring antenna:**

Broad-band antenna for the frequency range 30 - 300 MHz and frequency range 300 - 1000 MHz, connected with 10 meters coaxial cable. Cable loss of the coaxial cable included in the Antenna Factor for measurement data. The antennas are capable of measuring both horizontal and vertical polarizations.

Loop antenna for the frequency range 9KHz – 30MHz, connected with 10 meters coaxial cable. Cable loss of the coaxial cable included in the measurement data. The center of the loop 1 m above the ground plane, positioned with its plane vertical at the specified distance and rotated about its vertical axis and placed horizontal for maximum response at each azimuth about the EUT.

In the frequency range above 1 GHz horn-antenna RGA 50/60 is used.

**5. Frequency range scanned:**

The frequency range 30 - 5000 MHz has been scanned. Readings of the highest emissions relating to the limit were reported as above.

**6. Arrangement of EUT:**

During the test, the sample was operated at rated supply voltage and arranged for maximum emissions. To find the maximum emission, the antenna was raised from 1 to 4 meters and was stopped at the maximum emission point.

**7. Measuring Procedure:**

In accordance with the relevant sections of the American National Standards Institute (ANSI) C63.4-1992 'Methods of Measurement of Radio Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9KHz to 40GHz'.

# FCC – Test Report

Page 11 of 12

## Measurement Data of Emissions within Band Edges

Result : The field strength of any emission within the operation band did not exceed 80 dB( $\mu$ V/m) for average value or 100 dB( $\mu$ V/m) for peak value. Refer to page 9 for the recorded value for the emission at the fundamental frequency.
