Subject: **FCC ID NTAFP102TA ATCB003429: Clarifications**

- 1) This device is a **single channel device** operating at 915 MHz only.
- 2) This device is a single channel device operating at 915 MHz only without any capability to modify any radio proprieties such as frequency, output power, etc.

The software programming refers to:

- a) Man – Machine interface: according to customer request, such as turning ON and OFF the LEDs, when to activate the buzzer, etc, etc.
- b) Agency programming: this is performed at manufacturing site only, according to customer agency number.
- c) The software that enables writing and reading to the scratchpad is to enable event recordings, such as time and location when passing beyond a reader, and reading tag identification information.
