October 29, 2014

James Midyette **Genie Company**One Door Drive

Mt. Hope, OH 44660

Dear Mr. Midyette:

Enclosed is the test report for the Two Button Remote Control 315/390 MHz garage door opener transmitter model 315390C2 tested at our facility, located at 4675 Burr Drive in Liverpool, NY. This facility is on file with the Federal Communications Commission (FCC) per 47 CFR 2.948 (Site File Number 306552) and Industry Canada Site# 3034a-1.

We have completed our testing of Emissions to the FCC per 47 CFR Part 15 Class B and Part 15.231 Class C for intentional radiators and IC RSS 210 for Industry Canada Radio Standards Specification.

Thank you for selecting Diversified T.E.S.T. Technologies, Inc. for your testing needs. We look forward to working with you on future projects. Should you have any questions or concerns regarding this report, contact me at 315-457-0245. Please feel free to visit our website at www.dttlab.com.

Sincerely,

Prasanna Gautam Technical Associate

Report Issue Date: October 29, 2014

Report Number: 6501-1-102914- 15.231 (Edition 1)

Project Number: 6501-1

Date Received: August 4, 2014 Date Tested: September 10, 2014

Product Two Button Remote Control 315/390 MHz

Model: 315390C2

Traceability: Reference standards of measurement have been calibrated by a competent body using standards traceable to NIST.

The testing performed by Diversified TEST Technologies, Inc. has shown that the product referenced above complies with the electromagnetic compatibility requirements according to the FCC per 47 CFR Part 15.231. The results in this test report apply only to the Two Button Remote Control 315/390 MHz, Model: 315390C2.

It is the responsibility of the manufacturer to ensure that the product identification and labeling are in compliance with the applicable standards requirements. The manufacturer is also responsible for ensuring that additional units are manufactured with identical mechanical and electrical characteristics

The equipment listed above conforms to the specified requirements of the test standards listed in the Test Regulations section of this report.

## **Emissions Testing Conditions**

#### Radiated Emissions

| The Radiated Emissions measurements, in the frequency range of 1 MHz $-6000$ MHz, were tested in a horizontal and vertical polarization at the following test location: |
|---|
| <ul><li>☑ Diversified TEST Technologies, Inc. Open Area Test Site</li><li>☑ Diversified TEST Technologies, Inc. Lab</li></ul>   |
| at a test distance of:  |
| <ul> <li>         ∑ 3 meters         ☐ 10 meters         ☐ 30 meters         </li> </ul>  |

Measurements above 1 GHz were made at a test distance of 1 Meter

DTT uses automated data reductions to determine product compliance to Radiated Emissions regulations. The product's signal data is compared to a current ambient scan. The frequencies that are of significant amplitude are sorted and are brought out to be further analyzed and maximized.

Test equipment used:

## Transmission Requirements

#### Minimum Standard:

- 15.231 (a): Continuous transmissions such as voice, video, or data transmissions are not permitted.
- 15.231 (a) (1): A Manually operated transmitter shall employ a switch that will automatically deactivate within not more than 5 seconds after being released.
- 15.231 (a) (2): A transmitter activated automatically shall cease transmission within 5 seconds of activation.
- 15.231 (a) (3): Periodic Transmission at regular predetermined intervals are not permitted. However, polling or supervisory transmissions to determine system integrity of transmitters used in security or safety applications are allowed if the periodic rate of transmission does not exceed one transmission of not more than one second duration per hour for each transmitter.
- 15.231 (a) (4): Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life when activated to signal an alarm, may operate during the pendency of the alarm.

#### Test Results: Complies

**Test Data:** Compliance was determined by verification of technical specifications and functional tests on the equipment.

| DIVERSIFIED T.E.S.T. TECHNOLOGIES, INC. TEST REPORT |                 |  |  |  |  |  |
|---|-----------------|--|--|--|--|--|
| Genie Company                                       | Project Number: |  |  |  |  |  |

#### Radiated Emissions 15.231 (b)

#### **Minimum Standard:**

| Fundamental frequency (MHz) | Field strength of fundamental (microvolts/meter) | Field strength of spurious emissions (microvolts/meter) |
|-----------------------------|--|---|
| 40.66-40.70                 | 2,250  | 225   |
| 70-130                      | 1,250  | 125   |
| 130-174                     | <sup>1</sup> 1,250 to 3,750                      | <sup>1</sup> 125 to 375                                 |
| 174-260                     | 3,750  | 375   |
| 260-470                     | <sup>1</sup> 3,750 to 12,500                     | <sup>1</sup> 375 to 1,250                               |
| Above 470                   | 12,500   | 1,250   |

Any emissions that fall within the restricted bands of 15.205 shall not exceed the following limits:

| Frequency | Field Strength   | Field Strength |
|-----------|------------------|----------------|
| (MHz)     | $(\mu V/m @ 3m)$ | (dB @ 3m)      |
| 30-88     | 100              | 40.0           |
| 88-216    | 150              | 43.5           |
| 216-960   | 200              | 46.0           |
| Above 960 | 500              | 54.0           |

#### Test Result: Complies, see table on next page.

Above 1 GHz a spectrum analyzer is used to measure emission levels. The spectrum analyzer resolution bandwidth was set to 1 MHz and video bandwidth was set to 1 MHz.

#### Occupied Bandwidth

#### **Minimum Standard:**

15.231 (c) The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

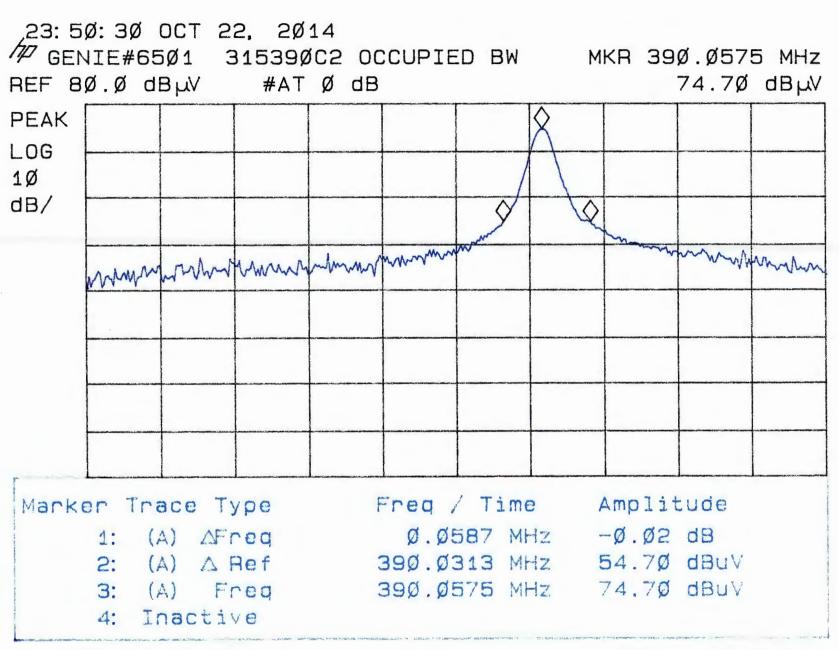

Test Data - Occupied Bandwidth 315/390 MHz

Test Results: Complies, see attached data

### Spurious Emissions

#### **Minimum Requirements:**

#### Radiated emission limits 15.109

(a) Except for Class A digital devices, the field strength of radiated emissions from unintentional radiators at a distance of 3 meters shall not exceed the following values:

| Frequency of emission (MHz) | Field strength (microvolts/meter) |
|-----------------------------|-----------------------------------|
| 30-88                       | 100                               |
| 88-216                      | 150                               |
| 216-960                     | 200                               |
| Above 960                   | 500                               |

# **Test Result:** Complies; highest spurious emission level recorded from 30 MHz - 6 GHz is 28.57 dBuV at 3.870 GHz.

15.209 Radiated emission limits; general requirements.

(a) Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

| Frequency (MHz) | Field strength (microvolts/meter) | Measurement distance (meters) |
|-----------------|-----------------------------------|-------------------------------|
| 0.009-0.490     | 2400/F(kHz)                       | 300                           |
| 0.490-1.705     | 24000/F(kHz)                      | 30                            |
| 1.705-30.0      | 30                                | 30                            |
| 30-88           | 100**                             | 3                             |
| 88-216          | 150**                             | 3                             |
| 216-960         | 200**                             | 3                             |
| Above 960       | 500                               | 3                             |
