***EMC* _{SAR} - TEST REPORT**

JQA APPLICATION No. : KL80040325

Name of Product : 2.4GHz Frequency Hopping Spread Spectrum Cordless Telephone

Model/Type No. : KX-TGA242

FCC ID : ACJ96NKX-TG2431

Applicant : Panasonic Communications Co., Ltd.

Address : 1-62, 4-chome, Minoshima, Hakata-ku, Fukuoka, 812-8531 Japan

Manufacturer : Panasonic Communications Co., Ltd.

Address : 1-62, 4-chome, Minoshima, Hakata-ku, Fukuoka, 812-8531 Japan

Receive date of EUT : October 4, 2004

Final Judgement : **Passed**

TEST RESULTS IN THIS REPORT are obtained in use of equipment that is traceable to National Institute of Advanced Industrial Science and Technology (AIST) under METI Japan, National Institute of Information and Communications Technology (NICT) under MPHPT Japan, and Laboratory for EMF and Microwave Electronics at the Swiss Federal Institute of Technology (ETH) in Zürich, Switzerland.

THE TEST RESULTS only responds to the test sample. This test report shall not be reproduced except in full.

Authorized by:

Takashi Yamanaka, Director

TEST REGULATION

FCC Rules and Regulations Parts 2 Subpart J (October 1, 2003)

- | | |
|---|---|
| <input type="radio"/> - Mobile Devices (§2.1091) | <input type="radio"/> - Occupational/Controlled Exposure |
| <input checked="" type="radio"/> - Portable Devices (§2.1093) | <input checked="" type="radio"/> - General Population/Uncontrolled Exposure |

Test procedure:

The SAR measurement procedures were specified in FCC/OET Bulletin 65 Supplement C (July, 2001) and IEEE Std 1528TM-2003
The exposure limits were specified in ANSI/IEEE C95.1-1999.

GENERAL INFORMATION

Description of the Equipment Under Test (EUT):

- | | |
|---------------------------|--|
| 1) Name | : 2.4GHz FHSS Cordless Telephone |
| 2) Model/Type No. | : KX-TGA242 |
| 3) Product Type | : Prototype |
| 4) EUT Authorization | : <input type="radio"/> - Verification <input checked="" type="radio"/> - Certification <input type="radio"/> - D.o.C. |
| 5) Transmitting Frequency | : 2400.914355 MHz - 2480.292773 MHz |
| 6) Receiving Frequency | : 2400.914355 MHz - 2480.292773 MHz |
| 7) Max. RF Output Power | : 16.70 dBm |
| 8) Power Rating | : DC 2.4V |

Definitions for symbols used in this test report:

- ☒ - Black box indicates that the listed condition, standard or equipment is applicable for this Report.
- ☐ - Blank box indicates that the listed condition, standard or equipment is not applicable for this Report.

Description of the Antenna:

Type : Inverted F-type antenna
Dimensions : Maximum width 6.0 mm
Maximum length 24.1 mm
Location : Right side (internal)

Battery Option:

Ni-MH Battery Pack HHR-P105 (830mAh)

Probe Specification:

Construction : Symmetrical design with triangular core
Built-in optical fiber for surface detection system
Built-in shielding against static changes

Calibration : In air form 10 MHz to 2.5 GHz
In head tissue simulating liquid (HSL) and
muscle tissue simulating liquid
900 MHz (accuracy $\pm 11.3\%$; $k=2$)
1800 MHz (accuracy $\pm 11.7\%$; $k=2$)
2450 MHz (accuracy $\pm 9.7\%$; $k=2$)

Frequency : 10 MHz to 3 GHz (dosimetry);
Linearity: ± 0.2 dB (30 MHz to 3 GHz)

Directivity : ± 0.2 dB in HSL (rotation around probe axis)
 ± 0.4 dB in HSL (rotation normal probe axis)

Dynamic Range : $5 \mu\text{W/g}$ to $>100 \text{ mW/g}$; Linearity: ± 0.2 dB

Surface Detection : ± 0.2 mm repeatability in air and clear liquids over diffuse
reflecting surfaces

Dimensions : Overall length 330 mm
Tip length 16 mm
Body diameter 12 mm
Tip diameter 6.8 mm
Distance from probe tip to dipole centers 2.7 mm

Twin SAM Phantom:

The shell corresponds to the specifications of the Specific Anthropomorphic Mannequin (SAM) phantom defined in IEEE 1528-200X, CENELEC 50361 and IEC 62209. It enables the dosimetric evaluation of left and right head phone usage as well as body mounted usage at the flat phantom region. A cover prevents evaporation of the liquid. Reference markings on the phantom allow the complete setup of all predefined phantom positions and measurement grids by manually teaching three points with the robot.

Shell Thickness : 2 ± 0.2 mm
 Filling Volume : Volume Approx. 25 liters
 Dimensions : $810 \times 1000 \times 500$ mm (H \times L \times W)

Mounting Device for Transmitters:

The Mounting Device enables the rotation of the mounted transmitter in spherical coordinates, whereby the rotation point is the ear opening. The devices can be easily and accurately positioned according to IEC, IEEE, CENELEC, FCC or other specifications. The device holder can be locked at different phantom locations (left head, right head, flat phantom).

Typical Composition of Ingredients for Liquid Tissue:

Ingredients (% by weight)	Frequency (MHz)					
	835		1900		2450	
	Head	Body	Head	Body	Head	Body
Water	41.45	52.40	54.90	40.40	62.70	73.20
Salt (NaCl)	1.45	1.40	0.18	0.50	0.50	0.04
Sugar	56.00	45.00	0.00	58.00	0.00	0.00
HEC	1.00	1.00	0.00	1.00	0.00	0.00
Bactericide	0.10	0.10	0.00	0.10	0.00	0.00
Triton X-100	0.00	0.00	0.00	0.00	36.80	0.00
DGBE	0.00	0.00	44.92	0.00	0.00	26.70

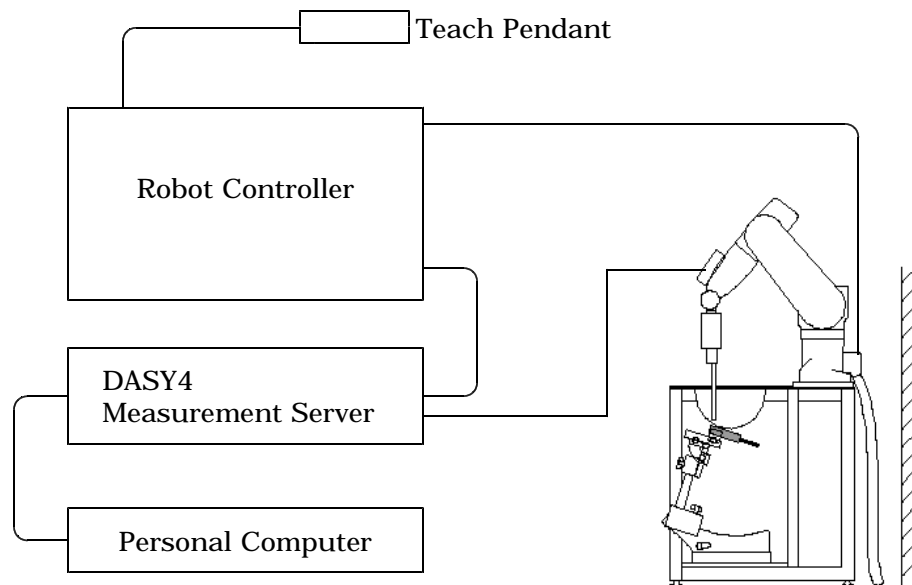

Salt : 99% Pure Sodium Chloride Sugar : 98% Pure Sucrose
 Water : De-ionized, $16 \text{ M}\Omega^+$ resistivity HEC : Hydroxyethyl Cellulose
 DGBE : 99% Di (ethylene glycol) butyl ether, [2-(2-butoxyethoxy)ethanol]
 Triton X-100 (ultra pure) : Polyethylene glycol mono [4-(1,1,3,3-tetramethylbutyl)phenyl]ether

The composition of ingredients is according to FCC/OET Bulletin 65 Supplement C (July, 2001).

SAR MEASUREMENT SET-UP

These measurements are performed using the DASY4 automated dosimetric assessment system (manufactured by Schmid & Partner Engineering AG (SPEAG) in Zürich, Switzerland). It consists of high precision robotics system, cell controller system, DASY4 measurement server, personal computer with DASY4 software, data acquisition electronic (DAE) circuit, the Electro-optical coupler (EOC), near-field probe, and the twin SAM phantom containing the equivalent tissue. The robot is a six-axis industrial robot performing precise movements to position the probe to the location (points) of maximum electromagnetic field (EMF).

The Robot is connected to the cell controller to allow software manipulation of the robot. The DAE is connected to the EOC. The DAE performs the signal amplification, signal multiplexing, A/D conversion, offset measurements, mechanical surface detection, collision detection, etc. The EOC performs the conversion from the optical into digital electric signal of the DAE and transfers data to the DASY4 measurement server.

TEST CONFIGURATION POSITIONS

Cheek/Touch Position:

1. Position the device with the vertical center line of the body of the device and the horizontal line crossing the center of the ear piece in a plane parallel to the sagittal plane of the phantom.
2. While maintaining the device in this plane, align the vertical center line with the reference plane containing the three ear and mouth reference points (M, RE and LE) and align the center of the ear piece with the line RE-LE.
3. Translate the mobile phone box towards the phantom with the ear piece aligned with the line RE-LE until the phone touches the ear.
4. While maintaining the device in the reference plane and maintaining the phone contact with the ear, move the bottom of the box until any point on the front side is in contact with the cheek of the phantom or until contact with the ear is lost.

Ear/Tilt Position:

1. Position the device in the "Cheek/Touch Position".
2. While maintaining the device in the reference plane and pivoting against the ear, move it outward away from the mouth by an angle of 15 degrees or until contact with the ear is lost.

Test Set-up (Photographs):

Left Head

Cheek/Touch Position

Ear/Tilt Position

Right Head

Cheek/Touch Position

Ear/Tilt Position

Body Worn Configuration:

For body-worn operating configurations, the device is tested against a flat phantom representing the user body. A headset is connected to the device. The Belt-clip is supplied with the device as an accessory, then the device with the belt-clip is 0 cm on distance from the flat phantom. It is recommended for testing body-worn SAR compliance.

MEASUREMENT PROCESS

Area Scan for Maximum Search:

The SAR distribution at the exposed side of the head was measured at a distance of 3.9 mm from the inner surface of the shell. The area covered the entire dimension of the head and the horizontal grid spacing was 10 mm × 10 mm. The evaluation on the measured area scan gives the interpolated maximum (hot spot) of the measured area.

Cube Scan for Spatial Peak SAR Evaluation:

The 1g and 10g peak evaluations were available for the predefined cube 5×5×7 scans. The grid spacing was 8 mm × 8 mm × 5 mm. The first procedure is an extrapolation to get the points between the lowest measured plane and the surface. The next step uses 3D interpolation to get all points within the measured volume in a 1mm grid (35000 points). In the last step, a 1g cube is placed numerically into the volume and its averaged SAR is calculated. This cube is moved around until the highest averaged SAR is found. This last procedure is repeated for a 10g cube. If the highest SAR is found at the edge of the measured volume, the system will issue a warning: higher SAR values might be found outside of the measured volume. In that case the cube measurement can be repeated, using the new interpolated maximum as the center.

Extrapolation:

The extrapolation is based on a least square algorithm. Through the points in the first 3 cm in all z-axis, polynomials of order four are calculated. This polynomial is then used to evaluate the points between the surface and the probe tip. The points, calculated from the surface, have a distance of 1 mm from one another.

Interpolation:

The maximum interpolated value is searched with a straightforward algorithm. Around this maximum the SAR values averaged over the spatial volumes (1g or 10g) are computed by the 3D spline algorithm. The 3D spline is composed of three one-dimensional splines with the "Not a knot"-condition (x, y and z -directions). The volume is integrated with the trapezoidal algorithm.

MEASUREMENT UNCERTAINTIES

Uncertainty Component	Uncertainty value (%)	Probability distribution	Divisor	c_i	Standard uncertainty 1g (%)	v_i
Measurement System						
Probe calibration	4.8	Normal	1	1	4.8	∞
Axial isotropy	4.7	Rectangular	$\sqrt{3}$	0.7	1.9	∞
Hemispherical isotropy	9.6	Rectangular	$\sqrt{3}$	0.7	3.9	∞

○ - Fixed Attenuator	54-10	D - 83		

EUT TUNE-UP PROCEDURE

The following procedures had been used to prepare the EUT for the SAR test.

To setup the desire channel frequency and the maximum output power, RF test mode prepared by the manufacturer was used to program the EUT.

Communication system : Cordless Telephone
Modulation type : Frequency Hopping Spread Spectrum (FHSS)

Channel	Frequency
01	2400.914355
45	2440.156641
90	2480.292773

Maximum conducted power was measured by replacing the antenna with an adapter for conductive measurements, before and after the SAR measurements was done.

EUT Modification

- - No modifications were conducted by JQA to achieve compliance to applied levels.
- - To achieve compliance to applied levels, the following change(s) were made by JQA during the compliance test.

— The modification(s) will be implemented in all production models of this equipment. —

Deviation from Standard

- - No deviations from the standard described in page 3.
- - The following deviations were employed from the standard described in page 3.

TEST RESULTS**Head Configuration**

The requirements are	● - Passed	○ - Not Passed
The Maximum SAR (1g) is	<u>0.0465</u> mW/g	at <u>2440.156641</u> MHz
Phantom Position	● - Left Head	○ - Right Head
Device Position	● - Cheek/Touch	○ - Ear/Tilt
Antenna Position	○ - In	○ - Out ● - Fixed
Modulation Type		<u>FHSS</u>
Measurement Uncertainty		<u>22.5</u> %

Remarks: _____

Body-worn Configuration

The requirements are	● - Passed	○ - Not Passed
The Maximum SAR (1g) is	<u>0.0317</u> mW/g	at <u>2440.156641</u> MHz
Modulation Type		<u>FHSS</u>
Measurement Uncertainty		<u>22.5</u> %

Remarks: _____

SUMMARY**GENERAL REMARKS :**

The EUT was tested according to the requirements of FCC Rules and Regulations Part 2 Subpart J (October 1, 2003) under the test configuration, as shown in page 7.

The conclusion for the test items of which are required by the applied regulation is indicated under the final judgement.

FINAL JUDGEMENT :

The "as received" sample;

- - fulfill the test requirements of the regulation mentioned on page 3.
- - fulfill the test requirements of the regulation mentioned on page 3, but with certain qualifications.
- - doesn't fulfill the test regulation mentioned on page 3.

Begin of testing : October 14, 2004

End of testing : October 18, 2004

TEST SYSTEM VALIDATION

The power meter PM1 (including 10dB Attenuator) measures the forward power at the location of the validation dipole connector. The signal generator is adjusted for 250 mW at the dipole connector and the power meter PM2 is read at that level. After connecting the cable to the dipole, the signal generator is readjusted for the same reading at power meter PM2.

The dipole antenna is matched to be used near flat phantom filled with tissue simulating solution. A specific distance holder is used in the positioning of the antenna to ensure correct spacing between the phantom and the dipole.

System Validation Results:

System Validation Dipole: D2450V2, S/N: 714						
Ambient Conditions: 21°C 62%		Depth of Liquid: 15.0 cm			Test Date: October 14, 2004	
Liquid		Parameters	Target	Measured	Deviation [%]	Limit [%]
Medium	Temp. [°C]					
Muscle 2450MHz	21.0	ϵ_r	52.70	52.30	-0.76	± 5
		σ	1.95	2.023	+3.74	± 5
		$Ig\ SAR\ (mW/g)$	13.6	14.0	+2.94	± 10
Ambient Conditions: 22°C 44%		Depth of Liquid: 15.0 cm			Test Date: October 18, 2004	
Head 2450MHz	22.0	ϵ_r	39.20	38.34	-2.19	± 5
		σ	1.80	1.885	+4.72	± 5
		$Ig\ SAR\ (mW/g)$	13.0	13.3	+2.31	± 10

Note) Please refer to Appendix for the result presentation in plot format.

TISSUE SIMULANT VERIFICATION

The tissue dielectric parameters of the tissue medium at the middle of a device transmission band should be within $\pm 5\%$ of the parameters specified at that target frequency. It is verified by using the dielectric probe and the network analyzer.

Tissue Verification Results:

Ambient Conditions: 21°C 62%				Test Date: October 14, 2004		
Liquid		Parameters	Target	Measured	Deviation [%]	Limit [%]
Medium	Temp. [°C]					
Muscle 2450MHz	21.0	ϵ_r	52.70	52.30	-0.76	± 5
