About this document

Purpose

This documentation set provides information about safety, features and functionality, ordering, hardware installation and maintenance, and software installation procedures of this ONT for the current release.

Intended audience

This documentation set is intended for planners, administrators, operators, and maintenance personnel involved in installing, upgrading, or maintaining the ONTs.

The reader must be familiar with general telecommunications principles.

Safety information

For your safety, this document contains safety statements. Safety statements are given at points where risks of damage to personnel, equipment, and operation may exist. Failure to follow the directions in a safety statement may result in serious consequences.

Safety Information Examples

Danger indicates that the described activity or situation may result in serious personal injury or death; for example, high voltage or electric shock hazards.

Warning indicates that the described activity or situation may, or will, cause equipment damage or serious performance problems.

Caution indicates that the described activity or situation may, or will, cause service interruption.

Note: A note provides information that is, or may be, of special interest.

Acronyms and initialisms

The expansions and optional descriptions of most acronyms and initialisms appear in the glossary

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use.

Nokia quality processes

Nokia's ONT manufacturing, testing, and inspecting practices are in compliance with TL 9000 requirements. These requirements are documented in the Fixed Networks Quality Manual 3FQ-30146-6000-QRZZA.

The quality practices adequately ensure that technical requirements and customer end-point requirements are met. The customer or its representatives may be allowed to perform on-site quality surveillance audits, as agreed upon during contract negotiations.

Documents

Documents are available using ALED or OLCS.

To download a ZIP file package of the customer documentation

	Navigate to http://customer.nokia.com/s/ and enter your user name and password. If you are a new user and require access to this service, please contact your Nokia sales representative.
2	Select Products.
3	Type your product name in the Find and select a product field and click the search icon. Select a product.
4	Click Downloads: ALED to go to the Electronic Delivery: Downloads page.
5	Select Documentation from the list.
6	Select a release from the list.
7	Follow the on-screen directions to download the file.
End	OF STEPS

To access individual documents

Individual PDFs of customer documents are also accessible through the Nokia Support Portal website.

	1	
		Navigate to http://customer.nokia.com/s/ and enter your user name and password. If you are a new user and require access to this service, please contact your Nokia sales representative.
	2	
		Select Products.
	3	
		Type your product name in the Find and select a product field and click the search icon. Select a product.
	4	
	-	Click Documentation: Doc Center to go to the product page in the Doc Center.
	5	
	-	Select a release from the Release list and click SEARCH .
	6	
	-	Click on the PDF icon to open or save the file.
	END	OF STEPS
Procedure	es \	with options or substeps
		en there are options in a procedure, they are identified by letters. When there are required steps in a procedure, they are identified by roman numerals.
Example	of c	options in a procedure
		Step 1, you can choose option a or b. At Step 2, you must do what the step indicates.
		stop 1, you can choose option a of b. At otep 2, you must do what the step indicates.

1 -

This step offers two options. You must choose one of the following:

- a. This is one option.
- b. This is another option.
- 2 _____

You must perform this step.

END OF STEPS -

Example of required substeps in a procedure

At Step 1, you must perform a series of substeps within a step. At Step 2, you must do what the step indicates.

1 —

This step has a series of substeps that you must perform to complete the step. You must perform the following substeps:

- a. This is the first substep.
- b. This is the second substep.
- c. This is the third substep.
- 2 _____

You must perform this step.

END OF STEPS

Multiple PDF document search

4

You can use Adobe Reader Release 6.0 and later to search multiple PDF files for a common term. Adobe Reader displays the results in a single display panel. The results are grouped by PDF file, and you can expand the entry for each file.

Note: The PDF files in which you search must be in the same folder.

To search multiple PDF files for a common term

 Open Adobe Acrobat Reader. 2		
 Select Edit→Search from the Acrobat Reader main menu. The Search PDF panel displays. Enter the search criteria. Select All PDF Documents In. Select the folder in which to search using the list. Click Search. Acrobat Reader displays the search results. You can expand the entries for each document by clicking on the + symbol. 		
 Enter the search criteria. Select All PDF Documents In. Select the folder in which to search using the list. Click Search. Acrobat Reader displays the search results. You can expand the entries for each document by clicking on the + symbol. 	2	
 Select All PDF Documents In. Select the folder in which to search using the list. G Click Search. Acrobat Reader displays the search results. You can expand the entries for each document by clicking on the + symbol. 	3	
 Select the folder in which to search using the list. Click Search. Acrobat Reader displays the search results. You can expand the entries for each document by clicking on the + symbol. 	4	
Click Search . Acrobat Reader displays the search results. You can expand the entries for each document by clicking on the + symbol.	5	
	6	Click Search . Acrobat Reader displays the search results. You can expand the entries for each document by

1 What's new

1.1 Overview

1.1.1 Purpose

1.1.2 Contents

1.1 Overview	21
1.2 What's new in BBD Release 21.03a	21
1.3 What's new in BBD Release 21.03	21
1.4 What's new in BBD Release 21.02a	22
1.5 What's new in BBD Release 21.02	22
1.6 What's new in BBD Release 21.01	22

1.2 What's new in BBD Release 21.03a

Table 1-1, "What's new in BBD Release 21.03a" (p. 21) lists the new features and enhancements added to the G-1425G-A product guide in Issue 5.

Table 1-1 What's new in BBD Release 21.03

Feature/enhancement	Description	See	
New features/enhancements			
Part numbers and identification	Added the ordering kit part numbers and related power supply details for customer specific variants.	Section 5.2 "G-1425G-A part numbers and identification" (p. 45)	

1.3 What's new in BBD Release 21.03

Table 1-2, "What's new in BBD Release 21.03" (p. 21) lists the new features and enhancements added to the G-1425G-A product guide in Issue 4.

Table 1-2 Wha	t's new in BBD	Release 21.03
---------------	----------------	---------------

Feature/enhancement	Description	See
Documentation changes		
Plug type	Added a table which describes the various plug types used in a ONT.	Table 5-3, "Plug types" (p. 47)

1.4 What's new in BBD Release 21.02a

Table 1-3, "What's new in BBD Release 21.02a" (p. 21) lists the new features and enhancements added to the G-1425G-A product guide in Issue 3.

Table 1-3 What's new in BBD Release 21.02a

Feature/enhancement	Description	See	
New features/enhancements			
Part numbers and identification	Added the ordering kit part numbers and related power supply details for customer specific variants.	Section 5.2 "G-1425G-A part numbers and identification" (p. 45)	

1.5 What's new in BBD Release 21.02

Table 1-4, "What's new in BBD Release 21.02" (p. 22) lists the new features and enhancements added to the G-1425G-A product guide in Issue 2.

Table 1-4 What's new in BBD Release 21.02

Feature/enhancement	Description	See	
New features/enhancements			
Log files	Updated the log page and added information on Export option.	Section 8.58 "Viewing log files" (p. 182)	

1.6 What's new in BBD Release 21.01

The Product guide is a new guide in BBD Release 21.01, issue 1. In future releases, this chapter will provide tables of the feature and document changes applicable to this guide.

2 ETSI ONT safety guidelines

This chapter provides information about the mandatory regulations that govern the installation and operation of the optical network terminals (ONTs).

2.1 Safety instructions

This section describes the safety instructions that are provided in the ONT customer documentation and on the equipment.

2.1.1 Safety instruction boxes

The safety instruction boxes are provided in the ONT customer documentation. Observe the instructions to meet safety requirements.

The following is an example of the Danger box.

Possibility of personal injury.

The Danger box indicates that the described activity or situation may pose a threat to personal safety. It calls attention to a situation or procedure which, if not correctly performed or adhered to, may result in death or serious physical harm.

Do not proceed beyond a Danger box until the indicated conditions are fully understood and met.

The following is an example of the Warning box.

Possibility of equipment damage.

Possibility of data loss.

The Warning box indicates that the described activity or situation may, or will, cause equipment damage, loss of data, or serious performance problems. It identifies a possible equipment-damaging situation or provides essential information to avoid the degradation of system operations or data.

Do not proceed beyond a warning until the indicated conditions are fully understood and met.

The following is an example of the Caution box.

Possibility of service interruption.

Service interruption.

The Caution box indicates that the described activity or situation may, or will, cause service interruption.

Do not proceed beyond a caution until the indicated conditions are fully understood and met.

The following is an example of the Note box.

Note: Information of special interest.

The Note box provides information that assists the personnel working with ONTs. It does not provide safety-related instructions.

2.1.2 Safety-related labels

The ONT equipment is labeled with the specific safety instructions and compliance information that is related to a variant of the ONT. Observe the instructions on the safety labels.

Table 2-1, "Safety labels" (p. 23) provides sample safety labels on the ONT equipment.

Table 2-1	Safety	labels
-----------	--------	--------

Description	Label text	
ESD warning Caution: This assembly contains an electrostatic sensitive device.		
Laser classification	Class 1 laser product	
PSE marking These power supplies are Japan PSE certified.		
VCCI marking Compliant with Japan VCCI emissions standards.		

Figure 2-1, "VCCI warning" (p. 24) shows the VCCI warning.

Figure 2-1 VCCI warning

Warning	This is a Class B product based on the standard of the Voluntary Control Council for Interference from Information Technology Equipment (VCCI). If this is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.
警告	VCCI準務クラスB機器(日本) この機器は、Information Technology EquipmentのVoluntary Control Council for Interference (VOCI) の規格に準拠したクラスB製品です。この機器をラジオやテレビ受信機の近くで使用した場合、 混信を発生する恐れがあります。本機器の設置および使用に開しては、取扱い説明書に従って ください。

19841

2.2 Safety standards compliance

This section describes the ONT compliance with the European safety standards.

2.2.1 EMC, EMI, and ESD compliance

The ONT equipment complies with the following EMC, EMI, and ESD requirements:

- EN 300-328 v1.9.1 wide band data transmission standards for 2.4GHz bands
- EN 300-386 V1.5.1: Electromagnetic Compatibility and Radio Spectrum Matters (ERM): Telecommunications Network Equipment; Electromagnetic Compatibility (EMC) requirements; Electrostatic Discharge (ESD) requirements
- EN 55022 (2006): Class B, Information Technology Equipment, Radio Disturbance Characteristics, limits and methods of measurement
- EN 55024 (2010): Information Technology Equipment, Immunity Characteristics, limits and methods of measurement
- European Council Directive 2004/108/EC
- EN 300-386 V1.4.1: 2008
- EN 55022:2006 Class B (ONTs)
- EN 301489-1 and EN 301489-17
- EN 55032: Information Technology Equipment, Immunity Characteristics, limits and methods of measurement
- EN 61000-3-2

2.2.2 Equipment safety standard compliance

The ONT equipment complies with the requirements of EN 60950-1, Safety of Information Technology Equipment for use in a restricted location (per R-269).

2.2.3 Environmental standard compliance

The ONT equipment complies with the EN 300 019 European environmental standards.

2.2.4 Laser product standard compliance

For most ONTs, the ONT equipment complies with EN 60825-1 and IEC 60825-2 for laser products. If there is an exception to this compliance regulation, you can find this information in the standards compliance section of the unit data sheet in this Product Guide.

2.2.5 Resistibility requirements compliance

The ONT equipment complies with the requirements of ITU Recommendation K.21 for resistibility of telecommunication equipment installed in customer premises to over voltage and over currents.

2.2.6 Acoustic noise emission standard compliance

The ONT equipment complies with EN 300 753 acoustic noise emission limit and test methods.

2.3 **Electrical safety guidelines**

This section provides the electrical safety guidelines for the ONT equipment.

Note: The ONTs comply with the U.S. National Electrical Code. However, local electrical authorities have jurisdiction when there are differences between the local and U.S. standards. The ONTs comply with BS EN 61140.

2.3.1 **Power supplies**

The use of any non-Nokia approved power supplies or power adapters is not supported or endorsed by Nokia. Such use will void any warranty or support contract with Nokia. Such use greatly increases the danger of damage to equipment or property.

2.3.2 Cabling

The following are the guidelines regarding cables used for the ONT equipment:

- All cables must be approved by the relevant national electrical code.
- The cables for outdoor installation of ONTs must be suitable for outdoor use.
- POTS wiring run outside the subscriber premises must comply with the requirements of local electrical codes. In some markets, the maximum allowed length of the outside run is 140 feet (43 m). If the outside run is longer, NEC requires primary protection at both the exit and entry points for the wire.

2.3.3 **Protective earth**

Earthing and bonding of the ONTs must comply with the requirements of local electrical codes.

ESD safety guidelines 2.4

The ONT equipment is sensitive to ESD. Operations personnel must observe the following ESD instructions when they handle the ONT equipment.

Service Disruption

This equipment is ESD sensitive. Proper ESD protections should be used when you enter the TELCO Access portion of the ONT.

During installation and maintenance, service personnel must wear wrist straps to prevent damage caused by ESD.

2.5 Laser safety guidelines

Observe the following instructions when you perform installation, operations, and maintenance tasks on the ONT equipment.

Only qualified service personnel who are extremely familiar with laser radiation hazards should install or remove the fiber optic cables and units in this system.

There may be invisible laser radiation at the fiber optic cable when the cable is removed from the connector. Avoid direct exposure to the laser beam.

Observe the following danger for laser hazard. Eyes can be damaged when they are exposed to a laser beam. Take necessary precautions before you plug in the optical modules.

Possibility of equipment damage. Risk of eye damage by laser radiation.

2.5.1 Laser classification

The ONT is classified as a Class 1 laser product based on its transmit optical output.

Laser warning labels

The following figures show the labels related to laser product, classification and warning.

Figure 2-2, "Laser product label" (p. 26) shows a laser product label.

Figure 2-2 Laser product label

18455

Figure 2-3, "Laser classification label" (p. 28) shows a laser classification label. Laser classification labels may be provided in other languages.

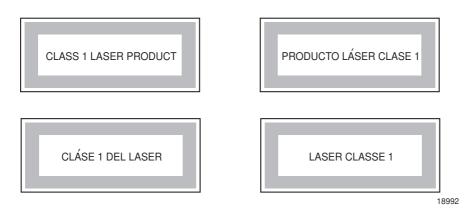

Figure 2-4, "Laser warning labels" (p. 29) shows a laser warning label and an explanatory label for laser products. Labels and warning may be provided in other languages. The explanatory label provides the following information:

- · a warning that calls attention to the invisible laser radiation
- · an instruction against staring into the beam or viewing directly with optical instruments
- wavelength
- normal output power
- · maximum output power

Figure 2-4 Laser warning labels

18993

2.5.2 Transmit optical output

The maximum transmit optical output of an ONT is +5 dBm.

2.5.3 Normal laser operation

In normal operation, fiber cable laser radiation is always off until it receives signal from the line terminal card.

Eyes can be damaged when they exposed to a laser beam. Operating personnel must observe the instructions on the laser explanatory label before plugging in the optical module.

Risk of eye damage by laser radiation.

2.5.4 Location class

Use cable supports and guides to protect the receptacles from strain.

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use.

2.6 Environmental requirements

See the ONT technical specification documentation for more information about temperature ranges.

During operation in the supported temperature range, condensation inside the ONT caused by humidity is not an issue. To avoid condensation caused by rapid changes in temperature and humidity, Nokia recommends:

- The door of the ONT not be opened until temperature inside and outside the enclosure has stabilized.
- If the door of the ONT must be opened after a rapid change in temperature or humidity, use a dry cloth to wipe down the metal interior to prevent the risk of condensation.
- When high humidity is present, installation of a cover or tent over the ONT helps prevent condensation when the door is opened.

3 ETSI environmental and CRoHS guidelines

This chapter provides information about the ETSI environmental China Restriction of Hazardous Substances (CRoHS) regulations that govern the installation and operation of the optical line termination (OLT) and optical network termination (ONT) systems. This chapter also includes environmental operation parameters of general interest.

3.1 Environmental labels

This section describes the environmental instructions that are provided with the customer documentation, equipment, and location where the equipment resides.

3.1.1 Overview

CRoHS is applicable to Electronic Information Products (EIP) manufactured or sold and imported in the territory of the mainland of the People's Republic of China. EIP refers to products and their accessories manufactured by using electronic information technology, including electronic communications products and such subcomponents as batteries and cables.

3.1.2 Environmental related labels

Environmental labels are located on appropriate equipment. The following are sample labels.

Products below Maximum Concentration Value (MCV) label

Figure 3-1, "Products below MCV value label" (p. 32) shows the label that indicates a product is below the maximum concentration value, as defined by standard SJ/T11363-2006 (Requirements for Concentration Limits for Certain Hazardous Substances in Electronic Information Products). Products with this label are recyclable. The label may be found in this documentation or on the product.

18986

Products containing hazardous substances above Maximum Concentration Value (MCV) label

Figure 3-2, "Products above MCV value label" (p. 32) shows the label that indicates a product is above the maximum concentration value, as defined by standard SJ/T11363-2006 (Requirements for Concentration Limits for Certain Hazardous Substances in Electronic Information Products). The number contained inside the label indicates the Environment-Friendly User Period (EFUP) value. The label may be found in this documentation or on the product.

Figure 3-2 Products above MCV value label

Together with major international telecommunications equipment companies, Nokia has determined it is appropriate to use an EFUP of 50 years for network infrastructure equipment and an EFUP of 20 years for handsets and accessories. These values are based on manufacturers' extensive practical experience of the design, manufacturing, maintenance, usage conditions, operating

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use.

environments, and physical condition of infrastructure and handsets after years of service. The values reflect minimum values and refer to products operated according to the intended use conditions. See 3.2 "Hazardous Substances Table (HST)" (p. 32) for more information.

3.2 Hazardous Substances Table (HST)

This section describes the compliance of the OLT and ONT equipment to the CRoHS standard when the product and sub assemblies contain hazardous substances beyond the MCV value. This information is found in this user documentation where part numbers for the product and sub assemblies are listed. It may be referenced in other OLT and ONT documentation.

In accordance with the People's Republic of China Electronic Industry Standard Marking for the Control of Pollution Caused by Electronic Information Products (SJ/T11364-2006), customers may access the Nokia Hazardous Substance Table, in Chinese, from the following location:

 http://www.nokia-sbell.com.cn/wwwroot/images/upload/private/1/media/ChinaRoHS.pdf (http://www.nokia-sbell.com.cn/wwwroot/images/upload/private/1/media/ChinaRoHS.pdf)

3.3 Other environmental requirements

Observe the following environmental requirements when handling the P-OLT or ONT equipment.

3.3.1 ONT environmental requirements

See the ONT technical specification documentation for more information about temperature ranges.

3.3.2 Storage

According to ETS 300-019-1-1 - Class 1.1, storage of ONT equipment must be in Class 1.1, weather-protected, temperature-controlled locations.

3.3.3 Transportation

According to EN 300-019-1-2 - Class 2.3, transportation of the ONT equipment must be in packed, public transportation with no rain on packing allowed.

3.3.4 Stationary use

According to EN 300-019-1-3 - Class 3.1/3.2/3.E, stationary use of ONT equipment must be in a temperature-controlled location, with no rain allowed, and with no condensation allowed.

3.3.5 Material content compliance

European Union (EU) Directive 2002/95/EC, "Restriction of the use of certain Hazardous Substances" (RoHS), restricts the use of lead, mercury, cadmium, hexavalent chromium, and certain flame retardants in electrical and electronic equipment. This Directive applies to electrical and electronic products placed on the EU market after 1 July 2006, with various exemptions, including an exemption for lead solder in network infrastructure equipment. Nokia products shipped to the EU after 1 July 2006 comply with the EU RoHS Directive.

Nokia has implemented a material/substance content management process. The process is described in: Nokia process for ensuring RoHS Compliance (1AA002660031ASZZA). This ensures

compliance with the European Union Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment (RoHS2). With the process equipment is assessed in accordance with the Harmonised Standard EN50581:2012 (CENELEC) on Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances.

3.3.6 End-of-life collection and treatment

Electronic products bearing or referencing the symbol shown in Figure 3-3, "Recycling/take back/ disposal of product symbol" (p. 33), when put on the market within the European Union (EU), shall be collected and treated at the end of their useful life, in compliance with applicable EU and local legislation. They shall not be disposed of as part of unsorted municipal waste. Due to materials that may be contained in the product, such as heavy metals or batteries, the environment and human health may be negatively impacted as a result of inappropriate disposal.

Note: In the European Union, a solid bar under the symbol for a crossed-out wheeled bin indicates that the product was put on the market after 13 August 2005.

Figure 3-3 Recycling/take back/disposal of product symbol

At the end of their life, the OLT and ONT products are subject to the applicable local legislations that implement the European Directive 2012/19EU on waste electrical and electronic equipment (WEEE).

There can be different requirements for collection and treatment in different member states of the European Union.

In compliance with legal requirements and contractual agreements, where applicable, Nokia will offer to provide for the collection and treatment of Nokia products bearing the logo shown in Figure 3-3, "Recycling/take back/disposal of product symbol" (p. 34) at the end of their useful life, or products displaced by Nokia equipment offers. For information regarding take-back of equipment by Nokia, or for more information regarding the requirements for recycling/disposal of product, contact your Nokia account manager or Nokia take back support at sustainability.global@nokia.com.

4 ANSI ONT safety guidelines

This chapter provides information about the mandatory regulations that govern the installation and operation of the optical network terminals or units (ONTs or ONUs) in the North American or ANSI market.

4.1 Safety instructions

This section describes the safety instructions that are provided in the ONT customer documentation and on the equipment.

4.1.1 Safety instruction boxes in customer documentation

The safety instruction boxes are provided in the ONT customer documentation. Observe the instructions to meet safety requirements.

The following is an example of the Danger box.

Possibility of personal injury.

The Danger box indicates that the described activity or situation may pose a threat to personal safety. It calls attention to a situation or procedure which, if not correctly performed or adhered to, may result in death or serious physical harm.

Do not proceed beyond a Danger box until the indicated conditions are fully understood and met.

The following is an example of the Warning box.

Possibility of equipment damage.

Possibility of data loss.

The Warning box indicates that the described activity or situation may, or will, cause equipment damage, loss of data, or serious performance problems. It identifies a possible equipment-damaging situation or provides essential information to avoid the degradation of system operations or data.

Do not proceed beyond a warning until the indicated conditions are fully understood and met.

The following is an example of the Caution box.

Possibility of service interruption.

Service interruption.

The Caution box indicates that the described activity or situation may, or will, cause service interruption.

Do not proceed beyond a caution until the indicated conditions are fully understood and met.

The following is an example of the Note box.

Note: Information of special interest.

The Note box provides information that assists the personnel working with ONTs. It does not provide safety-related instructions.

4.1.2 Safety-related labels

The ONT equipment is labeled with specific safety compliance information and instructions that are related to a variant of the ONT. Observe the instructions on the safety labels.

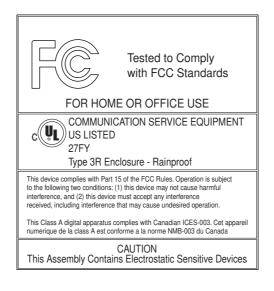

Table 4-1, "Safety labels" (p. 35) provides examples of the text in the various ONT safety labels.

Table	4-1	Safety	labels
rabio		ounory	labolo

Description	Label text
UL compliance	Communication service equipment US listed. Type 3R enclosure - Rainproof.
TUV compliance	Type 3R enclosure - Rainproof.
ESD warning	Caution: This assembly contains electrostatic sensitive device.
Laser classification	Class 1 laser product
Laser product compliance	This laser product conforms to all applicable standards of 21 CFR 1040.10 at date of manufacture.
FCC standards compliance	Tested to comply with FCC standards for home or office use.
CDRH compliance	Complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated June 24, 2007
Operation conditions	This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Canadian standard compliance (modular ONT)	This Class A digital apparatus complies with Canadian ICES-003.
Canadian standard compliance (outdoor ONT)	This Class B digital apparatus complies with Canadian ICES-003.
CE marking	There are various CE symbols for CE compliance.

Figure 4-1, "Sample safety label on the ONT equipment" (p. 36) shows a sample safety label on the ONT equipment.

Figure 4-1 Sample safety label on the ONT equipment

18533

4.2 Safety standards compliance

This section describes the ONT compliance with North American safety standards.

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

4.2.1 EMC, EMI, and ESD standards compliance

The ONT equipment complies with the following requirements:

- Federal Communications Commission (FCC) CFR 47, Part 15, Subpart B, Class A requirements for OLT equipment
- GR-1089-CORE requirements, including:
 - Section 3 Electromagnetic Interference, Emissions Radiated and Conducted
 - Section 3 Immunity, Radiated and Conducted
 - Section 2 ESD Discharge Immunity: System Level Electrostatic Discharge and EFT Immunity: Electrically Fast Transients

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is needed.
- Consult the dealer or an experienced radio/TV technician for help.

4.2.2 Equipment safety standard compliance

The ONT equipment complies with the requirements of UL60950-1, Outdoor ONTs to "Communication Service Equipment" (CSE) and Indoor ONTs to Information Technology Equipment (ITE).

4.2.3 Environmental standards compliance

The ONT equipment complies with the following standards:

- GR-63-CORE (NEBS): requirements related to operating, storage, humidity, altitude, earthquake, office vibration, transportation and handling, fire resistance and spread, airborne contaminants, illumination, and acoustic noise
- · GR-487-CORE: requirements related to rain, chemical, sand, and dust
- GR-487 R3-82: requirements related to condensation
- GR-3108: Requirements for Network Equipment in the Outside Plant (OSP)
- TP76200: Common Systems Equipment Interconnections Standards

4.2.4 Laser product standards compliance

The ONT equipment complies with 21 CFR 1040.10 and CFR 1040.11, except for deviations pursuant to Laser Notice No. 50, dated June 24, 2007" or to 21 CFR 1040.10 U.S. Center for Devices and Radiological Health (CDRH) of the Food and Drug Administration (FDA) Laser Notice 42 for ONTs containing Class 1 Laser modules certified by original manufactures.

Per CDRH 21 CFR 10.40.10 (h) (1) (iv) distributors of Class 1 laser products, such as Nokia ONTs shall leave the following Laser Safety cautions with the end user.

a) "Class 1 Laser Product"

b) "Caution – Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure."

Figure 4-2, "Sample laser product label showing CDRH 21 CFR compliance" (p. 39) shows a laser product label.

Figure 4-2 Sample laser product label showing CDRH 21 CFR compliance

18532

4.2.5 Resistibility requirements compliance

The ONT equipment complies with the requirements of ITU Recommendation K.21 for resistibility of telecommunication equipment installed in customer premises to over voltage and over currents.

4.3 Laser safety guidelines

Only qualified service personnel who are extremely familiar with laser radiation hazards should install or remove the fiber optic cables and units in this system.

Observe the following warnings when you perform installation, operations, and maintenance tasks on the ONT equipment.

There may be invisible laser radiation at the fiber optic cable when the cable is removed from the connector. Avoid direct exposure to beam.

Observe the following danger for a laser hazard. Eyes can be damaged when they are exposed to a laser beam. Take necessary precautions before you plug in the optical modules.

Possibility of equipment damage. Risk of eye damage by laser radiation.

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use.

3FE-77771-AAAA-TCZZA

Per CDRH 21 CFR 10.40.10 (h) (1) (iv) distributors of Class 1 laser products, such as Nokia ONTs shall leave the following Laser Safety cautions with the end user.

a) "Class 1 Laser Product"

b) "Caution – Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure."

4.3.1 Laser warning labels

The following figures show sample labels related to laser product, classification and warning. Figure 4-3, "Laser product label" (p. 39) shows a laser product label.

Figure 4-3 Laser product label

18455

Figure 4-4, "Laser classification label" (p. 40) shows a laser classification label. Laser classification labels may be provided in other languages.

Figure 4-4 Laser classification label

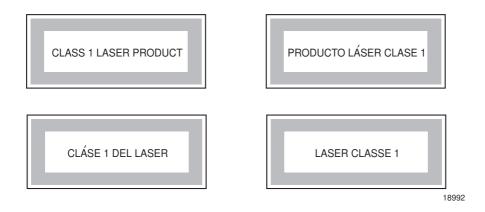

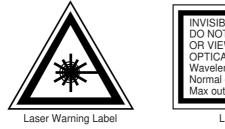

Figure 4-5, "Laser warning labels" (p. 41) shows a laser warning label and an explanatory label for laser products. Explanatory labels may be provided in other languages. The explanatory label provides the following information:

- · a warning that calls attention to the invisible laser radiation
- · an instruction against staring into the beam or viewing directly with optical instruments

- wavelength
- normal output power
- · maximum output power

Figure 4-5 Laser warning labels

INVISIBLE LASER RADIATION PRESENT AT FIBER OPTIC CABLE WHEN NOT CONNECTED. AVOID DIRECT EXPOSURE TO BEAM.

Laser Warning Label

18993

4.3.2 Laser classification

The ONT is classified as a Class 1 laser product based on its transmit optical output.

For Class 1 laser products, lasers are safe under reasonably foreseeable conditions of operation, including the use of optical instruments for intrabeam viewing.

Figure 4-6, "Sample laser product safety label on the ONT equipment" (p. 42) shows a sample laser product safety label on the ONT equipment.

Figure 4-6 Sample laser product safety label on the ONT equipment

4.3.3 Transmit optical output

The maximum transmit optical output of an ONT is +5 dBm.

4.3.4 Normal laser operation

In normal operation, fiber cable laser radiation is always off until it receives signal from the line terminal card.

Operating personnel must observe the instructions on the laser explanatory label before plugging in the optical module.

Risk of eye damage by laser radiation.

4.3.5 Location class

Use cable supports and guides to protect the receptacles from strain.

4.4 Electrical safety guidelines

This section provides the electrical safety guidelines for the ONT equipment.

Note: The ONTs comply with the U.S. National Electrical Code. However, local electrical authorities have jurisdiction when there are differences between the local and U.S. standards.

4.4.1 **Power supplies**

The use of any non-Nokia approved power supplies or power adapters is not supported or endorsed by Nokia. Such use will void any warranty or support contract with Nokia. Such use greatly increases the danger of damage to equipment or property.

4.4.2 Cabling

The following are the guidelines regarding cables used for the ONT equipment:

- · Use only cables approved by the relevant national electrical code.
- Use cables suitable for outdoor use for outdoor installation of ONTs.
- The ONTs have been evaluated for use with external POTS wiring without primary protection that may not exceed 140 ft (43 m) in reach. However, the power cable must not exceed 100 ft (31 m).

4.4.3 Protective earth

Earthing and bonding of the ONTs must comply with the requirements of NEC article 250 or local electrical codes.

4.5 ESD safety guidelines

The ONT equipment is sensitive to ESD. Operations personnel must observe the following ESD instructions when they handle the ONT equipment.

This equipment is ESD sensitive. Proper ESD protections should be used when entering the TELCO Access portion of the ONT.

During installation and maintenance, service personnel must wear wrist straps to prevent damage caused by ESD.

Nokia recommends that you prepare the site before you install the ONT equipment. In addition, you must control relative humidity, use static dissipating material for furniture or flooring, and restrict the use of air conditioning.

4.6 Environmental requirements

See the ONT technical specification documentation for temperature ranges for ONTs.

During operation in the supported temperature range, condensation inside the ONT caused by humidity is not an issue. To avoid condensation caused by rapid changes in temperature and humidity, Nokia recommends:

- The door of the ONT not be opened until temperature inside and outside the enclosure has stabilized.
- If the door of the ONT must be opened after a rapid change in temperature or humidity, use a dry cloth to wipe down the metal interior to prevent the risk of condensation.

• When high humidity is present, installation of a cover or tent over the ONT helps prevent condensation when the door is opened.

Table 5-4, "Hardware parts required for G-1425G-A installations" (p. 48) lists the hardware parts required for mounting an G-1425G-A ONT.

Table 5-4 Hardware parts required for G-1425G-A installations

Part	Description
ONT unit	The G-1425G-A ONT
Wall mount bracket (3FE 49555 AA)	The wall mount bracket is fastened to a wall. The G-1425G-A ONT is seated in the wall mount bracket.
Mounting screws	Two screws are required to mount the wall mount bracket. The recommended screw is a M4 or #6 screw with a pan head style of screw head.

5.3 G-1425G-A general description

G-1425G-A indoor ONTs provide the subscriber interface for the network by terminating the PON interface and converting it to user interfaces that directly connect to subscriber devices.

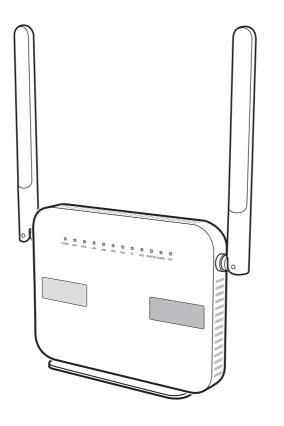

The G-1425G-A has built-in Wi-Fi 802.11 b/g/n/ac networking with triple play capability and can provide triple play services with voice, video and data.

The ONT is compatible with all existing subscriber equipment, including analog phones with both tone and rotary dial capabilities, cordless phones, modems, fax machines, and caller ID boxes (Type I, Type II, and Type III).

The ONT can be placed on a flat surface, such as a desk or shelf.

Figure 5-1, "G-1425G-A ONT (external antenna)" (p. 48) shows the G-1425G-A ONT.

Figure 5-1 G-1425G-A ONT (external antenna)

G-1425G-A indoor ONTs provide the following functions:

- Dual-band concurrent 2x2 IEEE 802.11b/g/n 2.4 GHz and 802.11ac MIMO 5 GHz
- Supports 802.11 b/g/n 2x2 Wireless 2.4 GHz MIMO; Channel bandwidth 20, 40, 20/40 MHz
- Supports 802.11ac 2x2 Wireless 5 GHz Mu-MIMO; Channel bandwidth 20, 40, 80 MHz
- Four Gigabit standard RJ-45 1000/100/10 Mbps, auto negotiating Ethernet ports and MDI/MDIX auto sensing

36684

- One POTS ports with R-J11 connectors
- GPON uplink: G.984 and G.988 series standard compliant
- 256MB NAND Flash with bad block management, 512MB DDR3 RAM, pin2pin compatible design for possible upgrade of RAM/Flash

- WLAN on/off push button
- WPS on/off push button
- LEDs on/off push button
- Reset button
- Triple-Play services, including voice, video and high speed Internet access
- Support for fax services
- Built-in layer 2 switch; Line Rate L2 traffic
- IP video distribution
- Wavelength: 1490 nm downstream; 1310 nm upstream
- Supports WBF filter. The GPON ONTs can co-exist with XGSPON ONTs in the same PON
- PHY rate: 300 Mbps for 2.4 G and 867 Mbps for 5 G
- External antennas with 5dBi gain for each
- Optics that support received signal strength indication (RSSI)
- 64/128 WEP encryption
- WPA, WPA-PSK/TKIP
- WPA2, WPA2-PSK/AES
- VLAN tagging/detagging and marking/remarking of IEEE 802.1p per Ethernet port.
- Dying gasp support
- Voice Services via Session Initiation Protocol (SIP)
- Multiple voice Code
- DTMF dialing
- Echo cancellation (G.168)
- Fax mode configuration (T.30/T.38)
- · Caller ID, call waiting, call hold, 3-way calling, call transfer, message waiting
- Forward Error Correction (FEC)
- Support for multiple SSIDs (private and public instances); contact your Nokia representative for further details.
- Conductive power: 160mW/22 dBm (2.4 GHz); 160mW/22 dBm (5GHz)
- Maximum effective isotropic radiated power (EIRP):
 5dBi external antenna: 500mW/27 dBm (2.4GHz); 500mW/27 dBm (5GHz)
- Bridged mode or routed mode per LAN port
- TR-069 support
- Ethernet-based Point-to-Point (PPPoE)
- DHCP client/server
- DNS server/client
- DDNS
- Port forwarding

- Network Address Translation (NAT)
- Network Address Port Translation (NAPT)
- UPnP IGD2.0 support
- ALG
- IGMP snooping and proxy (v2/v3)
- Traffic classification and QoS capability
- OMCI/TR-069 Web GUI configuration
- Performance monitoring and alarm reporting
- · Remote software image downloading and activation
- IP/MAC/URL filter
- Multi-level firewall and ACL
- Econet ONT in mainstream
- SoftGRE support
- OOKLA Speed Test support
- TR181 support

5.3.1 TR-069 parameter support

The G-1425G-A ONT supports the following TR-069 features:

- Host object
- Port forwarding
- · Optical parameters
- · Object support for optical parameters
- · Statistics and troubleshooting
- Diagnostic parameter
- · Component parameter

Host object support

The ONT provides host object support for: InternetGatewayDeviceLANDevice.Hosts.Host.

Port forwarding support

The ONT supports the port forwarding of objects via TR-069:

- Application Name
- WAN Port
- LAN Port
- Internal Client
- Protocol
- Enable Mapping
- WAN Connection List

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use. These are the same port forwarding parameters supported in the GUI. For more information, see Table 8-36, "Port Forwarding parameters" (p. 163) in Chapter 8, "Configure a G-1425G-A indoor ONT".

Optical parameters support

The ONT supports the reading of optical parameters via TR-069:

- · laser bias current
- voltage
- temperature
- received signal levels
- lower thresholds

These are the same optical parameters supported in the GUI. For more information, see Table 8-9, "Optics Module Status parameters" (p. 107) in Chapter 8, "Configure a G-1425G-A indoor ONT".

Object support for WiFi parameters

The ONT supports the status retrieval and configuration of the following Wi-Fi parameters via TR-069:

- channel
- SSID
- password for WPA and WEP
- Tx power (transmission rate in percentage of maximum transmit power)
- WPS

These are the same TR-069 object parameters that are supported in the GUI. For more information, see Table 8-16, "Wireless (2.4GHz) parameters" (p. 121) and Table 8-17, "Wireless (5GHz) parameters" (p. 123) in Chapter 8, "Configure a G-1425G-A indoor ONT".

Statistics and troubleshooting support

The ONT supports TR-069 statistics and troubleshooting for LAN, WAN, and WiFi.

Diagnostic parameter support

The ONT supports the following TR-069 diagnostic parameters:

- TR-143
- IP ping
- traceroute

These are the same diagnostic parameters supported in the GUI. For more information, see 8.57 "Diagnosing WAN connections" (p. 180) in Chapter 8, "Configure a G-1425G-A indoor ONT".

5.3.2 TR69 authentication using TLS and CA certificates

G-1425G-A ONTs support TLS, as well as ACS authentication using SHA-256 pre-installed certificates.

If the URL is set to the https://... format, by default, the connection will use TLS without authentication mode. The ONT can also authenticate the ACS using a pre-installed CA certificate.

The G-1425G-A ONTs support TLSv1.3 for TR069. The ONT supports download certification from ACS.

5.3.3 TR-104 parameter extension support for voice service

A vendor specific attribute has been added to the TR-104 Voice Service object structure to enable the ACS to configure the name of the embedded GSIP XML file to be selected.

The TR-104 Voice Service Object is: InternetGatewayDevice.Services.VoiceService.{i}.Capabilities.SIP.

The vendor specific attribute is: X_ALU-COM_XML_File_Name_Path.

5.3.4 TR-104 voice-related alarms

The G-1425G-A ONT supports the following four TR-104 voice-related alarms on a per FXS port basis.

These alarms all represent SIP registration failures with an alarm level of MAJOR.

- SIPREGDNS: domain name could not be resolved
- SIPREGAUTH: authentication failed
- SIPREGTO: re-transmissions timed out
- SIPREGERR: error response from the registration server

5.3.5 TR-104 parameters for FX line testing

New attributes have been added to the TR-104 Voice Service object structure to enable the ACS to perform line tests. The ONT supports the following electrical line tests:

- hazardous potential
- · foreign electrical motive force
- resistive faults
- receiver off-hook test
- ringers test

5.3.6 TR-111 support

The G-1425G-A ONT supports TR-111, which extends the WAN Management Protocol defined in TR-069 to enhance the ability to remotely manage LAN devices.

The device-gateway association enables an ACS to identify the associated gateway through which a device is connected.

A connect request via the NAT gateway enables an ACS to initiate a TR-069 session with a device that is operating behind a NAT gateway.

5.3.7 TR-181 parameter support

TR-181 parameter support has been introduced or enhanced for the parameter categories and functions listed in Table 5-5, "Support for TR-181 parameter categories" (p. 53).

TR-181 can be enabled (instead of TR-098) by defining the associated TR-181 parameter in a customer specific pre-configuration file downloadable into the ONT.

For details about which parameters are supported, see your Nokia representative.

Parameter category	Functionality

5.4 G-1425G-A software and installation feature support

For information on installing or replacing the G-1425G-A see:

- Chapter 6, "Install a G-1425G-A indoor ONT"
- Chapter 7, "Replace a G-1425G-A indoor ONT"

For information on the following topics, see the **Nokia ONT Product Overview Guide**:

- ONT and MDU general descriptions of features and functions
- Ethernet interface specifications
- · POTS interface specifications
- RSSI specifications
- · Wi-Fi specifications

- ONT optical budget
- SLID entry via Ethernet port
- ONT management using an ONT interface

5.5 G-1425G-A interfaces and interface capacity

Table 5-6, "G-1425G-A indoor ONT interface connection capacity" (p. 55) describes the supported interfaces and interface capacity for G-1425G-A indoor ONTs.

Table 5-6	G-1425G-A indoor ONT interface connection capacity

ONT type and	Maximum	Maximum capacity							
model	POTS	100/10 BASE-T	1000/100/10 BASE-T	RF video (CATV)	MoCA	VDSL2	E1/T1	Local craft	GPON SC/APC
G-1425G-A ¹	1	_	4	—	—	_	—	_	1

Notes:

1. The G-1425G-A ONTs provide Wi-Fi service that is enabled and disabled using a Wi-Fi on/off switch.

5.5.1 G-1425G-A connections and components

Figure 5-2, "G-1425G-A indoor ONT physical connections (back)" (p. 57) shows the physical connections for G-1425G-A indoor ONTs.

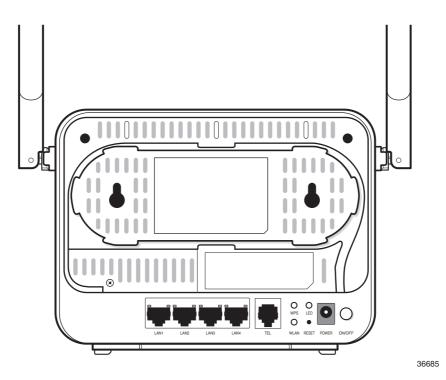

Figure 5-3, "G-1425G-A indoor ONT with fiber optic connector" (p. 58) shows the G-1425G-A indoor ONT with a fiber optic connector.

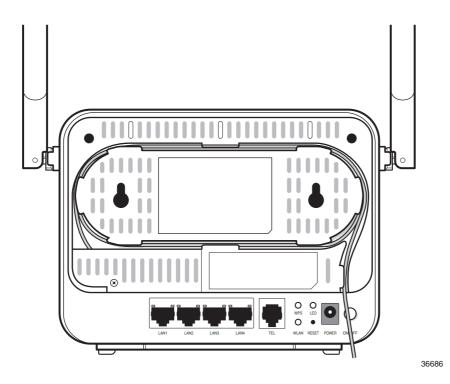

Table 5-7, "G-1425G-A indoor ONT physical connections" (p. 58) describes the physical connections for G-1425G-A indoor ONTs.

Table 5-7	G-1425G-A	indoor ONT	physical	connections
-----------	-----------	------------	----------	-------------

Connection ¹	Print Letters	Description
POTS port	TEL	This connection is provided through an RJ-11 port. One POTS connection is supported. The POTS port supports voice services.
Ethernet ports	LAN1 to LAN4	This connection is provided through Ethernet RJ-45 connectors. Up to four 1000/100/10 Base-T Ethernet interfaces are supported. The Ethernet ports can support both data and in-band video services on all four interfaces.
Power input	POWER	This connection is provided through the power connector. A power cable fitted with a barrel connector is used to make the connection.
Reset button	RESET	Pressing the Reset button for less than 10 seconds reboots the ONT; pressing the Reset button for 10 seconds resets the ONT to the factory defaults, except for the LOID and SLID. Accessible through a 2mm pin hole.
WLAN button	WLAN	Wi-Fi service is compliant with IEEE 802.11 standards and is enabled and disabled using the WLAN button.
WPS button	WPS	The Wi-Fi Protected Setup (WPS) button enables and disables the WPS for 2.4GHz and 5GHz.

Connection ¹	Print Letters	Description
LED button	LED	The LED button turns the LED indicators on or off.
On/Off button	ON/OFF	This button turns the ONT on or off.
Fiber optic port	-	The SC/APC fiber optic port is located at the back of the ONT and provides the connection for the fiber optic cable.

Table 5-7 G-1425G-A indoor ONT physical connections (continued)

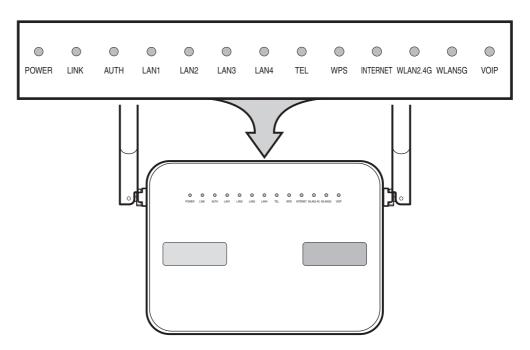

Notes:

1. The primary path for the earth ground for these ONTs is provided by the 12V Return signal in the power connector.

5.6 G-1425G-A LEDs

Figure 5-4, "G-1425G-A indoor ONT LEDs" (p. 59) shows the G-1425G-A indoor ONT LEDs.

Figure 5-4 G-1425G-A indoor ONT LEDs

36687

Table 5-8, "G-1425G-A indoor ONT LED descriptions" (p. 60) provides LED descriptions for G-1425G-A indoor ONTs.

Table 5-8 G-1425G-A indoor ONT LED description
--

Indicator	LED color and behavior	LED behavior description
POWER	Green solid Green flashing Off	Power on Light failed on startup (for example corrupt flash), or selftest failed on startup, or selftest failed during regular operation or when executed over OMCI Power off
LINK	Green solid Off	GPON link between ONT and OLT is operating normally GPON link is down or no link is connected
AUTH	Off Green solid Green flashing	Fiber is not connected or no power is received to the ONT ONT is configured on the OLT and is in service (UP) ONT is in the process of ranging or synchronizing over the OLT
LAN 1 to 4	Off Green solid Green flashing	ONT power is off or Ethernet is not connected ONT is connected to the associated LAN port (includes devices with wake-on-LAN capability where a slight voltage is supplied to an Ethernet connection) LAN activity is present (traffic in either direction)
TEL	Green solid Green flashing Off	Phone is off hook. Phone is in 'call in' or 'talking' condition All phones are on hook
VOIP	Green solid Off	VoIP service is built up and can provide service VoIP service is not built up or out of service
WPS	Green solid Green flashing Off	 WiFi protected setup link is up (negotiation and auto-configuration successful) WiFi protected setup link activity (negotiation and auto-configuration ongoing) WiFi protected setup link down or no link connected (negotiation has not started or has failed). WiFi protected setup processing exception or multiple peers using WPS simultaneously
WLAN 2.4 GHz	Green solid Green flashing Off	WLAN link is enabled in 2.4 GHz Traffic is passing through the WLAN link WLAN link is disabled or no link is connected
WLAN 5 GHz	Green solid Green flashing Off	WLAN link is enabled in 5 GHz Traffic is passing through the WLAN link WLAN link is disabled or no link is connected
INTERNET	Green solid Green flickering Off	IP connected (the device has a WAN IP address from IPCP/DHCP/Static and Broadband link is up) and no traffic detected. If the IP or PPPoE session is dropped due to an idle timeout, the light will remain green if PON link is still present. If the session is dropped for any other reason, the light is turned off. PPPoE or DHCP connection is in progress. Broadband physical connection power off, device in bridged mode with no IP address assigned to the device, or Broadband physical interface connection not present

5.7 G-1425G-A detailed specifications

Table 5-9, "G-1425G-A indoor ONT physical specifications" (p. 61) lists the physical specifications for G-1425G-A indoor ONTs.

Table 5-9 G-1425G-A indoor ONT physical specifications

Description	Specification
Depth (with external antenna)	1.45 in. (36.9 mm)
Length and Depth of the bottom plate (with external antenna)	1.96 in. (50 mm)
Width (with external antenna)	8.82 in. (224.2 mm)
Height (including antenna) (without antenna)	11.17 in. (283.9 mm) 5.37 in. (136.4 mm)
Weight [within ± 0.5 lb (0.23 kg)] (net weight of ONT) (with internal antenna)	0.82 lbs (372 g)

The following figure shows an example ONT physical specifications. The physical dimension may differ for each ONT model.

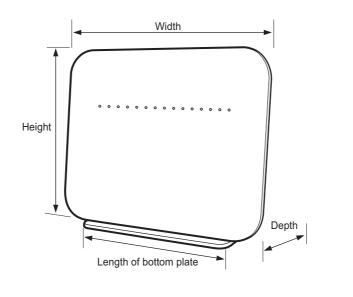

Table 5-10, "G-1425G-A indoor ONT power consumption specifications" (p. 61) lists the power consumption specifications for G-1425G-A indoor ONT.

36940

Table 5-10	G-1425G-A indoor ONT p	power consumption	specifications
------------	------------------------	-------------------	----------------

Mnemonic	Maximum power (Not to exceed)	Condition	Minimum power	Condition
G-1425G-A ¹	9.6 W	1 POTS off-hook, 4 1000/100/10 Base-T Ethernet, Wi-Fi operational	3.6 W	1 POTS on-hook, other interfaces/services not provisioned

Notes:

1. The units without USB have lower power consumption. The minimum power consumption for ONT without USB is 18W.

Table 5-11, "G-1425G-A indoor ONT environmental specifications" (p. 61) lists the environmental specifications for G-1425G-A indoor ONT.

Table 5-11	G-1425G-A indoor ONT environmental specifications

Mounting method	Temperature range and humidity	Altitude
On desk or shelf	Operating: 23°F to 113°F (-5°C to 45°C) ambient temperature 5% to 95% relative humidity, non-condensing	Contact your Nokia technical support representative for more information
	Storage: -4°F to 158°F (-20°C to 70°C)	

Table 5-12, "G-1425G-A indoor ONT Dimension data specifications" (p. 62) lists the dimension data specifications for G-1425G-A indoor ONT.

Dimensions	Specifications
packet size supported	1704 frames
number of IP addresses supported (or ranges)	In LAN network, the supported range is: • IPv4: 192.168.0.2 ~ 192.168.0.254 • IPv6: no limitation
number of supported Wi-Fi clients (per radio, per device, per mesh)	32 per radio, 64 per device, 128 per mesh
number of supported beacons /APs in a mesh	3 beacons in mesh network
number of supported WAN interfaces	Supports 8 WAN connections
number of supported VLANs	Supports 4094 VLANs
number of priority queues, and overall buffer size	128 priority queues. Max 16MB for WAN and 4MB for LAN
number of multicast groups (DACL entries)	1024

5.8 G-1425G-A GEM ports and T-CONTs

Table 5-13, "G-1425G-A indoor ONT capacity for GEM ports and T-CONTs" (p. 62) lists the maximum number of supported T-CONTs and GEM ports. See the appropriate release Customer Release Notes for the most accurate list of supported devices.

<i>Table 5-13</i> G-1425G-A indoor ONT capacity for GEM ports and T-CONTs

ONT or MDU	Maximum	Notes
Package P ONTs		

Table 5-13	G-1425G-A indoor ON	Capacity for GEM ports ar	nd T-CONTs	(continued)
------------	---------------------	---------------------------	------------	-------------

ONT or MDU	Maximum	Notes
GEM ports per indoor or outdoor ONT	256	256 are present; 254 are available, and 2 are reserved for multicast and debugging
T-CONTs per indoor or outdoor ONT	32	32 are present; 31 are available, and 1 is reserved for OMCI

5.9 G-1425G-A performance monitoring statistics

The following section identifies the supported performance monitoring statistics for G-1425G-A ONTs. A check mark indicates the statistic is supported on that ONT. An empty cell indicates the statistic is not supported. The following tables are categorized by supported alarm types:

- Table 5-14, "Package S ONTs ONTENET performance monitoring statistics" (p. 63) provides statistics for ONTENET type counters
- Table 5-15, "Package S ONTs ONTL2UNI performance monitoring statistics" (p. 64) provides statistics for ONTL2UNI type counters
- Table 5-16, "Package S ONTS PONONTTC, PONONTMCTC, PONONTTCHSI, PONONTTCCES, PONONTTCFLOW, PONONTTCVOIP performance monitoring statistics" (p. 64) provides statistics for PONONTTC, PONONTMCTC, PONONTTCHSI, PONONTTCCES, PONONTTCFLOW, and PONONTTCVOIP type counters
- Table 5-17, "Package S ONTs PONONTTC aggregate performance monitoring statistics" (p. 64) provides statistics for PONONTTC aggregate type counters

Note: If you have trouble accessing G-1425G-A ONTs performance monitoring statistics using TL1, please contact your Nokia support representative for more information about how to access and retrieve performance monitoring type counters.

5.10 G-1425G-A functional blocks

G-1425G-A indoor ONTs are single-residence ONTs that support Wireless (Wi-Fi) service. Wi-Fi service on these ONTs is compliant with the IEEE 802.11 standard and enabled or disabled using a WLAN button. In addition to the Wi-Fi service, these ONTs transmit Ethernet packets to four RJ-45 Ethernet ports and voice traffic to two RJ-11 POTS port. These ONTs also feature fiber optic, and power connectors.

Figure 5-6, "G-1425G-A ONT functional block" (p. 64) shows the functional blocks for G-1425G-A indoor ONT.

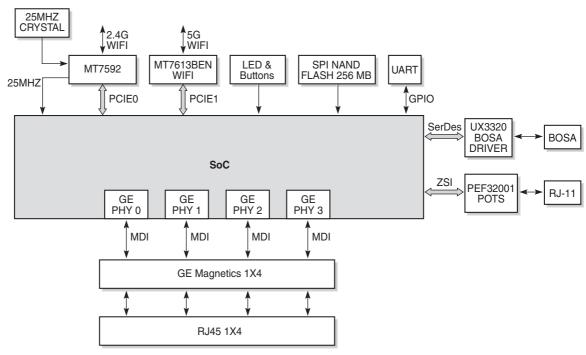

Figure 5-6 G-1425G-A ONT functional block

36689

5.11 G-1425G-A standards compliance

G-1425G-A indoor ONTs are compliant with the following standards:

- · CE marking for European standards for health, safety, and environmental protection
- EN 300-328 v1.9.1 wide band data transmission standards for 2.4GHz bands
- G.984 support GPON interface (framing)
- G.984.2 (Amd1, class B+) for GPON
- · G.984.3 support for activation and password functions
- G.984.3 support for AES with operator enable/disable on per port-ID level

- G.984.3 support for dynamic bandwidth reporting
- G.984.3 support for FEC in both upstream and downstream directions
- G.984.3 support for multicast using a single GEM Port-ID for all video traffic
- G.984.4 and G.983.2 support for ONT management and provisioning
- IEEE 802.1p for traffic prioritization
- IEEE 802.1q for VLANs
- IEEE 802.3 (2012)
- IEEE 802.11 ac/b/g/n for Wi-Fi
- ITU-T G.711, G.722, G.723, G.726, G.729
- SIP RFC 3261

5.11.1 Energy-related products standby and off modes compliance

Hereby, Nokia declares that the G-1425G-A ONTs are in compliance with the essential requirements and other relevant provisions of Directive 2009/125/EC together with Commission Regulation (EC) No 1275/2008 and Commission Regulation (EC) No 801/2013.

The G-1425G-A ONTS qualify as equipment with high network availability (HiNA) functionality. Since the main purpose of G-1425G-A ONTs is to provide network functionality with HiNA 7 days /24 hours, the modes Off/Standby, Power Management, and Networked Standby are inappropriate.

For information about the type and number of network ports, see 5.5 "G-1425G-A interfaces and interface capacity" (p. 56) in this chapter.

For information about power consumption, see 5.7 "G-1425G-A detailed specifications" (p. 60) in this chapter.

5.11.2 FCC statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- · Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

5.11.3 FCC Radiation Exposure Statement

This device complies with FCC radiation exposure limits set forth for an uncontrolled environment and it also complies with Part 15 of the FCC RF Rules. This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be colocated or operating in conjunction with any other antenna or transmitter. End-users and installers must be provided with antenna installation instructions and consider removing the no-collocation statement.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1. this device may not cause harmful interference, and
- 2. this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

5.12 G-1425G-A special considerations

G-1425G-A is a package P ONT.

5.12.1 Wi-Fi service

G-1425G-A indoor ONTs feature Wi-Fi service as well as voice and data services. Wi-Fi is a wireless networking technology that uses radio waves to provide wireless HSI and network connections. This ONT complies with the IEEE 802.11 standards, which the Wi-Fi Alliance defines as the basis for Wi-Fi technology.

Wi-Fi physical features

G-1425G-A indoor ONTs have the following physical features that assist in providing Wi-Fi service:

- 1 WLAN button for enabling and disabling Wi-Fi service
- 1 Wi-Fi Protected Setup (WPS) push button for adding WPS-enabled wireless devices
- 4 internal antennas: 2 for 2.4G and 2 for 5G

Wi-Fi standards and certifications

The Wi-Fi service on G-1425G-A indoor ONTs supports the following IEEE standards and Wi-Fi Alliance certifications:

- Certified for IEEE 802.11ac/b/g/n/standards
- WPA support including WPA-PSK
- Certified for WPA2-Personal

• Certified for WPA2-enterprise

Wi-Fi GUI features

G-1425G-A indoor ONTs have HTML-based Wi-Fi configuration GUIs.

5.12.2 G-1425G-A ONT considerations and limitations

Table 5-18, "G-1425G-A ONT considerations and limitations" (p. 67) lists the considerations and limitations for Package P G-1425G-A ONTs.

Table 5-18 G-1425G-A ONT considerations and limitations

Considerations and limitations
Call History Data collection (ONTCALLHST) is supported, except for the following parameters: RTP packets (discarded), far-end RTCP and RTCP-XR participation, RTCP average and peak round trip delay, MOS, average jitter, number of jitter-buffer over-runs and under runs.
Some voice features are configurable on a per ONT basis, including Call Waiting, Call Hold, 3-Way Calling, and Call Transfer.

The maximum value of the ringing AC voltage is 60Vrms, and the ring DC offset voltage is suggested to be 0V.

The following voice features / GSIP parameters are configurable on a per-Client/ per-ONT basis (not per-Subscriber):

- Enable Caller ID and Enable Caller Name ID
- · Digitmap and the associated Interdigit and Critical timers and Enter key parameters
- Warmline timer is enabled per subscriber, but the warmline timer value is configured per ONT and must have a lower value than the Permanent time
- · Miscellaneous timers: Permanent, Timed-release, Reanswer, Error-tone, and CW-alert timers
- Features / functions: Message waiting mode, WMWI refresh interval, DTMF volume level
- · Service Codes for the following features: CW, Call Hold and Warmline

6 Install a G-1425G-A indoor ONT

6.1 Overview

6.1.1 Purpose

6.1.2 Contents

6.1 Overview	69
6.2 Purpose	69
6.3 General	69
6.4 Prerequisites	69
6.5 Recommended tools	69
6.6 Safety information	70
6.7 Procedure	70
6.8 Wall mount an G-1425G-A indoor ONT	73

6.2 Purpose

This chapter provides the steps to install a G-1425G-A indoor ONT.

6.3 General

The steps listed in this chapter describe mounting and cabling for a G-1425G-A indoor ONT.

6.4 Prerequisites

You need the following items before beginning the installation:

• all required cables

6.5 Recommended tools

You need the following tools for the installation:

- #2 Phillips screwdriver
- 1/4 in. (6 mm) flat blade screwdriver
- wire strippers
- fiber optic splicing tools
- RJ-45 cable plug crimp tool
- voltmeter or multimeter

- · optical power meter
- drill and drill bits
- paper clip

6.6 Safety information

Read the following safety information before installing the unit.

Hazardous electrical voltages and currents can cause serious physical harm or death. Always use insulated tools and follow proper safety precautions when connecting or disconnecting power circuits.

Make sure all sources of power are turned off and have no live voltages present on feed lines or terminals. Use a voltmeter to measure for voltage before proceeding.

Always contact the local utility company before connecting the enclosure to the utilities.

WARNING **Equipment Damage**

This equipment is ESD sensitive. Proper ESD protections should be used when removing the fiber access cover of the indoor ONT.

Service Disruption

Keep indoor ONTs out of direct sunlight. Prolonged exposure to direct sunlight can damage the unit.

Note: Observe the local and national laws and regulations that may be applicable to this installation.

Observe the following:

- The indoor ONT should be installed in accordance with the applicable requirements of the NEC or CEC. Local authorities and practices take precedent when there is conflict between the local standard and the NEC or CEC.
- The indoor ONT must be installed by qualified service personnel.
- Indoor ONTs must be installed with cables that are suitably rated and listed for indoor use.
- See the detailed specifications in the Chapter 5, "G-1425G-A unit data sheet" for the temperature ranges of these ONTs.

6.7 **Procedure**

Use this procedure to install a G-1425G-A indoor ONT.

1 _____

Place the indoor ONT unit on a flat surface, such as a desk or shelf.

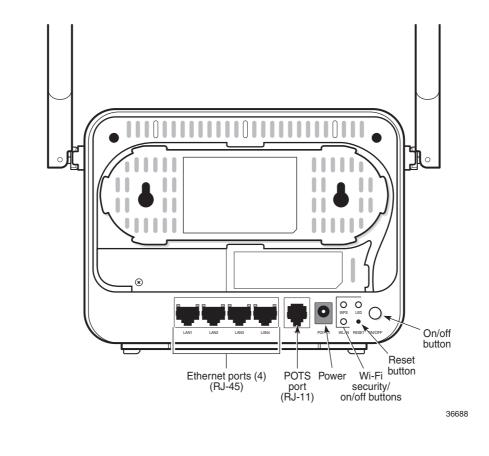

Note: The G-1425G-A cannot be stacked with another ONT or with other equipment. The ONT mounting requirements are:

- allow a minimum 100 mm clearance above the top cover
- allow a minimum 50 mm clearance from the side vents
- do not place any heat source directly above the top cover or below the bottom cover

2 -

Review the connection locations, as shown in Figure 6-1, "G-1425G-A ONT connections" (p. 70).

3

Connect the Ethernet cables to the RJ-45 ports.

3FE-77771-AAAA-TCZZA

4 -

Route the POTS cable directly to the RJ-11 port as per local practices.

5

Fiber cables transmit invisible laser light. To avoid eye damage or blindness, never look directly into fibers, connectors, or adapters.

Be careful to maintain a bend radius of no less than 1.5 in. (3.8 cm) when connecting the fiber optic cable. Too small of a bend radius in the cable can result in damage to the optic fiber.

Connect the fiber optic cable with SC/APC adapter to the SC/APC connector on the bottom of the ONT.

Note: Fiber cable preparation varies depending on the type and size of the inside or outside plant fiber cable being spliced to the SC/APC fiber optic pigtail cable.

```
6
```

Connect the power cable to the power connector.

7

Power up the ONT unit by using the power switch.

8

If used, enable the Wi-Fi service.

- a. Locate the WLAN button on the ONT; see Figure 6-1, "G-1425G-A ONT connections" (p. 71) for location of the WLAN button.
- b. Press the WLAN button to change the status of the Wi-Fi service.

9

Verify the ONT LEDs, voltage status, and optical signal levels; see the **Nokia ONT Hardware** and **Cabling Installation Guide**.

10

Activate and test the services; see the Nokia ONT Hardware and Cabling Installation Guide.

If used, configure the SLID; see the Nokia ONT Configuration, Management, and Troubleshooting Guide. 12

If necessary, reset the ONT.

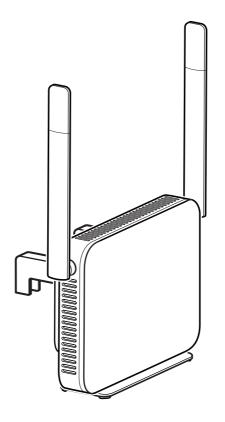

- a. Locate the Reset button on a G-1425G-A indoor ONT as shown in Figure 6-1, "G-1425G-A ONT connections" (p. 71).
- b. Insert the end of a straightened paper clip or other narrow object into the hole in the Reset button to reset the ONT.

END OF STEPS

6.8 Wall mount an G-1425G-A indoor ONT

This chapter provides the steps to mount an G-1425G-A indoor ONT on a wall using a wall mount bracket (3FE 49555 AA). The G-1425G-A indoor ONT is shipped without the wall mount bracket. The wall mount bracket (3FE 49555 AA) must be ordered separately.

Figure 6-2 G-1425G-A ONT in wall mounting bracket

36712

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use.

6.8.1 Recommended tools

See section 6.5 "Recommended tools" (p. 69) for the recommended tools.

6.8.2 Procedure

Use this procedure to mount an G-1425G-A ONT on a wall. Two installation options are available:

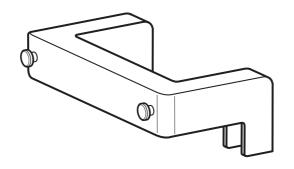

- Option 1—facing the room for the LEDs to be visible
- · Option 2-facing the wall for the connectors and buttons to be visible
 - 1 —

Place the indoor ONT unit:

- a. Facing the room, go to Step 2. See Figure 6-7, "ONT in wall mount bracket—facing the room" (p. 78).
- b. Facing the wall, go to Step 3. See Figure 6-6, "ONT to wall mount connection" (p. 77).
- 2

Mount the ONT on a wall facing the room using the wall mount bracket (3FE 49555 AA), as shown in Figure 6-3, "G-1425G-A wall mount bracket" (p. 73).

Figure 6-3 G-1425G-A wall mount bracket

36713

a. Determine the location of the two anchor holes for the wall mount bracket. The bracket can be used as a template for marking and drilling the holes.

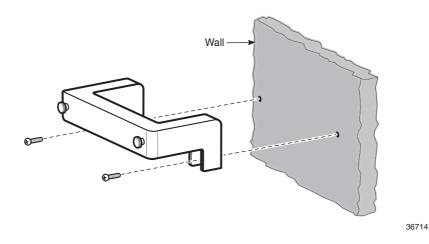

It is recommended to use a level to ensure that the ONT unit is installed properly.

- b. Drill two holes 35 mm (1.37 in.) depth into the wall and with the centers spaced 157 mm (6.2 in.).
- c. Insert the two mounting screws and optional anchors into the holes, leaving a 2 mm (0.078 in.) gap between the screw head and the wall.
- d. At this point, perform a test to ensure that the wall mount bracket fits securely over the screw

heads. Mount the bracket flush to the wall so that it does not warp or twist.

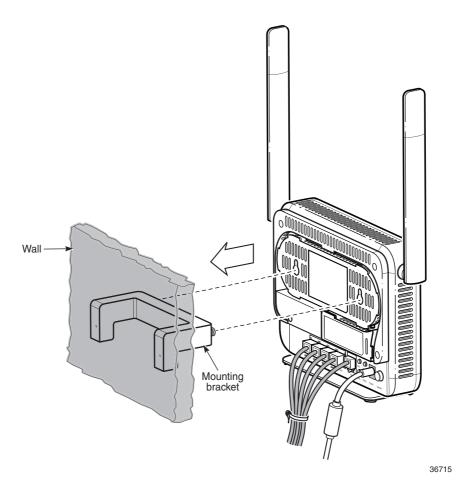

- e. Remove the wall mount bracket from the wall.
- f. Route the power cord through the slot in the wall mount bracket. The ferrite bead on the power cord should remain on the underside of the wall mount bracket. See Figure 6-4, "Wall mount bracket power cord placement" (p. 74).

Figure 6-4 Wall mount bracket power cord placement

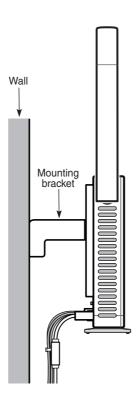

Connect the power cord to the G-1425G-A ONT. See Figure 6-5, "Power cord to ONT connection" (p. 76).

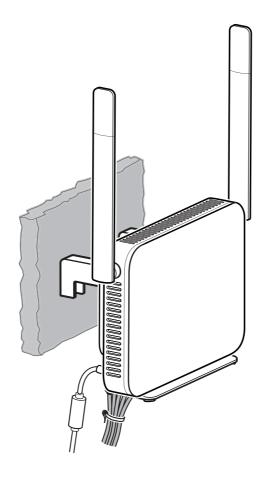

g. Install the ONT into the wall mount bracket by lifting the unit above the bracket and sliding it downward onto the bottom ledge of the bracket. See Figure 6-6, "ONT to wall mount connection" (p. 77).

36716

- h. Seat the ONT into the wall mount bracket by engaging the hooks on the base of the unit with those on the bracket; see Figure 6-7, "ONT in wall mount bracket—facing the room" (p. 78). Engaging the hooks ensures that the ONT stays in place while the unit is mounted onto the wall.
- i. Connect the cables.
- j. Hang the unit onto the wall. Figure 6-7, "ONT in wall mount bracket—facing the room" (p. 78) shows the cables routed through the wall mount bracket and the ONT facing the room.

36717

3

Mount the ONT facing the wall using the wall mount bracket (3FE 49555 AA).

a. Determine the location of the two anchor holes for the wall mount bracket. The bracket can be used as a template for marking and drilling the holes.

It is recommended to use a level to ensure that the ONT unit is installed properly.

- b. Drill two holes 35 mm (1.37 in.) depth into the wall and with the centers spaced 157 mm (6.2 in.).
- c. Insert the two mounting screws and optional anchors into the holes, leaving a 2 mm (0.078 in.) gap between the screw head and the wall.
- d. At this point, perform a test to ensure that the wall mount bracket fits securely over the screw heads. Mount the bracket flush to the wall so that it does not warp or twist.
- e. Remove the wall mount bracket from the wall.

- f. On a flat surface such as a desk, install the ONT into the wall mount bracket by lifting the unit above the bracket and sliding it downward onto the bottom ledge of the bracket.
- g. Seat the ONT into the wall mount bracket by engaging the hooks on the base of the unit with those on the bracket. Engaging the hooks ensures that the ONT stays in place while the unit is mounted onto the wall.
- h. Mount the unit onto the wall.
- i. Connect the cables. See Chapter 6, "Install a G-1425G-A indoor ONT".

Figure 6-5, "Power cord to ONT connection" (p. 76) shows the mounted unit facing the wall with the cables (including the fiber) installed.

END OF STEPS -

7 Replace a G-1425G-A indoor ONT

7.1 Overview

7.1.1 Purpose

7.1.2 Contents

7.1 Overview	81
7.2 Purpose	81
7.3 General	81
7.4 Prerequisites	81
7.5 Recommended tools	81
7.6 Safety information	82
7.7 Procedure	82

7.2 Purpose

This chapter provides the steps to replace a G-1425G-A indoor ONT.

7.3 General

The steps listed in this chapter describe mounting and cabling for a G-1425G-A indoor ONT.

7.4 Prerequisites

You need the following items before beginning the installation:

• all required cables

7.5 Recommended tools

You need the following tools for replacing the ONT:

- #2 Phillips screwdriver
- 1/4 in. (6 mm) flat blade screwdriver
- wire strippers
- fiber optic splicing tools
- RJ-45 cable plug crimp tool
- · voltmeter or multimeter
- · optical power meter

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use. • drill and drill bits

7.6 Safety information

Read the following safety information before replacing the unit.

Hazardous electrical voltages and currents can cause serious physical harm or death. Always use insulated tools and follow proper safety precautions when connecting or disconnecting power circuits.

Make sure all sources of power are turned off and have no live voltages present on feed lines or terminals. Use a voltmeter to measure for voltage before proceeding.

Always contact the local utility company before connecting the enclosure to the utilities.

This equipment is ESD sensitive. Proper ESD protections should be used when removing the fiber access cover of the indoor ONT.

CAUTION

Service Disruption

Keep indoor ONTs out of direct sunlight. Prolonged exposure to direct sunlight can damage the unit.

Note: Observe the local and national laws and regulations that may be applicable to this installation.

Observe the following:

- The indoor ONT should be installed in accordance with the applicable requirements of the NEC or CEC. Local authorities and practices take precedent when there is conflict between the local standard and the NEC or CEC.
- The indoor ONT must be installed by qualified service personnel.
- Indoor ONTs must be installed with cables that are suitably rated and listed for indoor use.
- See the detailed specifications in the Chapter 5, "G-1425G-A unit data sheet" for the temperature ranges of these ONTs.

7.7 Procedure

Use this procedure to replace a G-1425G-A indoor ONT.

1 —

Deactivate the ONT services at the P-OLT.

If you are using the SLID feature, this step is not required. The ONT and the services can remain in service (IS).

a. Use the RTRV-ONT command to verify the ONT status and th associated services. Record the serial number or the SLID of the ONT displayed in the command output.

Example:

```
RTRV-ONT::ONT-1-1-1-1;
```

b. If the ONT is in service, place the ONT in OOS state.

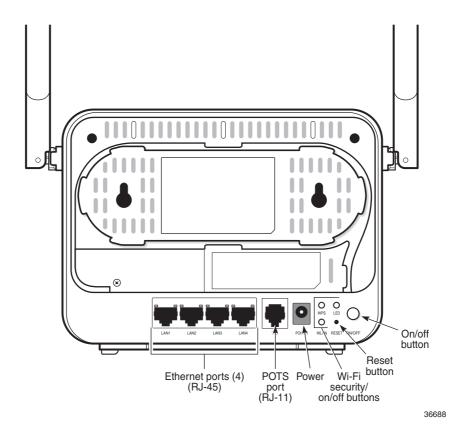

Example:

ED-ONT::ONT-1-1-1-1;

```
2
```

If used, disable the Wi-Fi service by pressing the WLAN button. The following figure shows the location of the WLAN button.

Figure 7-1 G-1425G-A indoor ONT connections

November 2021 Issue 5 © 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use. 3FE-77771-AAAA-TCZZA

83

3 —

Power down the unit by using the on/off power switch.

4

Disconnect the POTS, Ethernet, and power cables from the ONT; see Figure 7-1, "G-1425G-A indoor ONT connections" (p. 83) for the connector locations on the G-1425G-A indoor ONT.

5 -

Fiber cables transmit invisible laser light. To avoid eye damage or blindness, never look directly into fibers, connectors, or adapters.

Disconnect the fiber optic cables.

- a. Unplug the fiber optic cable with SC/APC connector from the bottom of the ONT.
- b. Attach a fiber dust cover to the end of the SC/APC connector.

6

Replace the old ONT with a new ONT on a flat surface, such as a desk or shelf.

7 -

Connect the Ethernet cables directly to the RJ-45 ports; see Figure 7-1, "G-1425G-A indoor ONT connections" (p. 83) for the location of the RJ-45 ports.

8

Connect the POTS cable directly to the RJ-11 port as per local practices; see Figure 7-1, "G-1425G-A indoor ONT connections" (p. 83) for the location of the RJ-11 ports.

9

Fiber optic cables transmit invisible laser light. To avoid eye damage or blindness, never look directly into fibers, connectors, or adapters.

If required, have approved service personnel who are trained to work with optic fiber clean the fiber optic connection. See the **Nokia ONT Configuration, Management, and Troubleshooting Guide** for more information about fiber optic handling, inspection, and cleaning. 10

DANGER Hazard

Fiber cables transmit invisible laser light. To avoid eye damage or blindness, never look directly into fibers, connectors, or adapters.

Be careful to maintain a bend radius of no less than 1.5 in. (3.8 cm) when connecting the fiber optic cable. Too small of a bend radius in the cable can result in damage to the optic fiber.

Connect the fiber optic cable with SC/APC adapter into the SC/APC connector on the bottom of the ONT.

Note: Fiber cable preparation varies depending on the type and size of the inside or outside plant fiber cable being spliced to the SC/APC fiber optic pigtail cable.

11 -

Connect the power cable to the power connector.

12 -

Power up the unit by using the power switch.

13

If used, enable the Wi-Fi service by pressing the WLAN button; see Figure 7-1, "G-1425G-A indoor ONT connections" (p. 83) for the location of the WLAN button.

14 —

l i

If used, configure the SLID; see the Nokia ONT Configuration, Management, and Troubleshooting Guide for more information.

Note: A new SLID or the old SLID may be used with the replacement ONT. If a new SLID is used, the new SLID must also be programmed at the P-OLT using TL1 or a network manager. If the old SLID is used, no changes need to be made at the P-OLT; see the operations and

maintenance documentation for the OLT for more details.

15 -

Verify the ONT LEDs, voltage status, and optical signal levels; see the Nokia ONT Hardware and Cabling Installation Guide.

16 –

Activate and test the services; see the Nokia ONT Hardware and Cabling Installation Guide.

17 —

If necessary, reset the ONT.

- a. Locate the Reset button on a G-1425G-A indoor ONT as shown in Figure 7-1, "G-1425G-A indoor ONT connections" (p. 83).
- b. Insert the end of a straightened paper clip or other narrow object into the hole in the Reset button to reset the ONT.

GUI configuration

8.2 General configuration

Refer to the configuration information provided with your OLT for the software configuration procedure for a G-1425G-A ONT.

For HTTP configuration procedures, please refer to the **Nokia ONT Configuration, Management, and Troubleshooting Guide**.

8.3 HGU mode GUI configuration

Use the procedures below to use the web-based GUI for the G-1425G-A in HGU mode. This mode is preset at delivery.

A home gateway unit (HGU) is a home networking device, used as a gateway to connect devices in the home through fiber to the Internet. An HGU provides a variety of features for the home network including routing and firewall capability. By using the HGU, users can connect all smart equipment in their home, including personal computers, set-top boxes, mobile phones, and other consumer electronics devices, to the Internet.

The G-1425G-A ONTs support TLSv1.2 for WEBGUI (HTTPS).

8.4 Log in to the web-based GUI

Use the procedure below to login to the web-based GUI for the G-1425G-A.

1

Open a web browser and enter the IP address of the ONT in the address bar.

The Login page displays.

The default gateway IP address must be same as the one printed on the device label. You can connect to this IP address using your web browser after connecting your PC to one of Ethernet ports of the ONT. The static IP address of your PC must be in the same default gateway subnet as the ONT.

2

Pressing the **Reset** button for less than 10 seconds reboots the ONT; pressing the **Reset** button for 10 seconds resets the ONT to the factory defaults, except for the LOID and SLID.

Enter your username and password in the Login page.

The default end-user account name and the default password for this account are printed on the device label. The superadmin account is meant for the Operator and is unique per device. Contact your Nokia representative to obtain the superadmin password based on the serial number on the device.

Figure 8-1 Web login page

GPORT	oma Galoway	
Usemame		
Password		1
Login	Res	set

Note: If you forget the current username and password, press the reset button for 10 seconds and the default values for the username and password will be recovered at startup.

3

Click Login. The Device Information page displays.

Note: To help protect the security of your Internet connection, it is recommended to modify both the Wi-Fi password and the ONT WEBGUI login password as soon as possible if you have read and edit permissions.

END OF STEPS

Viewing device information and connection status

8.5 Overview

8.5.1 Purpose

This chapter describes procedures to view device information and connection status on the G-1425G-A.

8.5.2 Contents

8.5 Overview	92
8.6 Overview	92
8.7 Viewing device information	94
8.8 Viewing LAN status	95
8.9 Viewing WAN status	97
8.10 Viewing WAN IPv6 status	99
8.11 Viewing STA information	101
8.12 Viewing Neighboring Access Points	103
8.13 Viewing home networking information	104
8.14 Viewing Optics module status	106
8.15 Viewing statistics	107
8.16 Viewing voice information	110

8.6 Overview

1

Click **Status** \rightarrow **Overview** from the left pane in the GPON Home Gateway page. The Overview page displays the following information:

2 –

Configure the following parameters:

Table 8-21 GRE Tunnel parameters

Field	Description
Tunnel Name	Select Create new GRE Tunnel or select an existing tunnel from the list. The tunnel name is automatically assigned by the system. Up to 3 GRE tunnels are supported.
WAN Interface	Select a WAN interface from the list. GRE tunnels can only be created on HSI-enabled WAN interfaces.
Primary Remote End Secondary Remote End (optional)	Enter an IP address or FQDN that is unique in the system. If the primary remote endpoint is down or unreachable, the secondary remote endpoint becomes active, if configured. The secondary remote endpoint remains active until it becomes unreachable, in which case the primary remote endpoint becomes active again. Revertive mode is not supported. If both endpoints are unreachable, the GRE tunnel is declared down.
Connected Remote End	This field displays the current data traffic path for the GRE tunnel.
Connectivity check	This feature is automatically selected by the system.
Traffic timeout to start pings	Enter the traffic timeout in seconds (2 to 1024).

Table 8-21 GRE Tunnel parameters (continued)

Field	Description
No. of retries before unreachable	Enter the number of retries before the tunnel is declared down (0 to 100).

3 —

Click Save.

Click **Delete** to delete the entries.

END OF STEPS -

8.29 Configuring Upstream (US) Classifier

The US Classifier feature is used to create policies, classifiers, and classifier rules for upstream traffic handling. This feature is available to admin users (super users) only.

A policy defines an action to be performed on a set of LAN or WAN packets. A policy can be created at any time and then subsequently assigned to one or more classifiers.

A classifier is used to select key fields for which the classifier rules will be written. A classifier can be created at any time and then subsequently assigned to one or more classifier rules.

A classifier rule is used to assign actions to a group of packets based on a set of parameters. A classification rule must be created against a pre-defined classifier.

Up to 16 policies can be created, with up to 8 classifiers and 32 classifier rules.

1 –

Click **Network** \rightarrow **US Classifier** from the left pane in the GPON Home Gateway page. The US Classifier page displays.

All classifier policies are displayed in the policy table in the page.

Figure 8-26 US Classifier Policy page

	Network>US Classi	fier

Configure the following parameters:

Table 8-25 QoS Config parameters

Field	Description					
QoS Setting						
Type Select a QoS service layer type from the list: L2 or L3.						
Classification Criteria						
Source MAC Enter the source MAC address. Select the Exclude checkbox to exclude the source MAC address.						
Interface Select an interface from the list.						
Classification Result						

Field	Description		
DSCP Remark	Enter the value for the DSCP mark (range: 0-63); valid only for L3 Criteria.		
802.1p Remark	Enter the value for the 802.1p (range: 0-7).		
Forwarding Policy	Enter the number for the forwarding policy (range: 1-7).		
Additional fields for L3			
Protocol	Select a protocol from the list, or select the Exclude checkbox.		
Application	Select an application from the list.		
Source IP and Source IP Mask	Enter the values for the source IP and IP mask, or select the Exclude checkbox.		
Destination IP and Destination IP Mask	Enter the values for the destination IP and IP mask, or select the Exclude checkbox.		
Source Port and Source Port Max	Enter the values for the source port and port max (highest port number) or select the Exclude checkbox.		
Destination Port and Destination Port Max	Enter the values for the destination port and port max (highest port number), or select the Exclude checkbox.		

Table 8-25 QoS Config parameters (continued)

3 -

Click Add to add a QoS policy.

You can click Edit to edit the QoS rules or Delete to delete the QoS configuration.

Figure 8-31, "QoS rules edit window" (p. 140) shows the window for editing the QoS rules.

2 -

Enter the beacon serial number and click **Add**. The following information displays:

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use.

Table 8-26 Mesh parameters

Field	Description
Beacon Serial Number	Indicates the serial number of the extender Nokia WiFi beacon device.
Onboarding Status	Indicates whether the extender Nokia WiFi beacon associated with the serial number is configured to the mesh or not. If it is configured then the extender beacon MAC address is added to the Root.
Backhaul Status	Indicates the status of the backhaul connection. It represents the backhaul status of Good, Normal, or Bad values, between the Root Access Point and the extender Access Point.
Friendly Name	Indicates the friendly name that is defined while on-boarding the extender Nokia WiFi beacon using the Nokia WiFi Mobile Application.

Note: The number of the entries in the mesh parameters table depends on number of extenders in the home network. If you have two extenders, then there will be two entries in the mesh parameters table.

Click **Refresh** to display up-to-date information.

END OF STEPS -

Security configuration

8.32 Overview

8.32.1 Purpose

This chapter describes the security configuration tasks supported by G-1425G-A ONTs

8.32.2 Contents

8.32 Overview	143
8.33 Configuring the firewall	143
8.34 Configuring the MAC filter	144
8.35 Configuring the IP filter	147
8.36 Configuring the URL filter	148
8.37 Configuring parental control	150
8.38 Configuring DMZ and ALG	158
8.39 Configuring access control	160

8.33 Configuring the firewall

1 -

Click **Security**→**Firewall** from the left pane in the GPON Home Gateway page. The Firewall page displays.

Figure 8-33 Firewall page

2 –

Configure the following parameters:

Field	Description
ALG Config	Select the checkboxes to enable the protocols to be supported by the ALG: FTP, TFTP, SIP, H323, RTSP, L2TP, IPSEC, PPTP.

3 —

Click Save ALG.

4 —

Configure the following parameters:

Field	Description	
WAN Connection List	Select a WAN connection from the list.	
Enable DMZ	Select this checkbox to enable DMZ on the chosen WAN connection.	
DMZ IP Address	Select Custom Settings and enter the DMZ IP address or select the IP address of a connected device from the list.	

5 —

Click Save DMZ.

END OF STEPS -

8.39 Configuring access control

This procedure describes how to configure the access control level (ACL).

Note: ACL takes precedence over the firewall policy.

The trusted network object will be shared for all WAN connections; it is not applied individually to a WAN connection.

1 -

Click **Security**→**Access Control** from the left pane in the GPON Home Gateway page. The Access Control page displays.

	Security-Access Control

2 —

Configure the following parameters:

Table 8-34 Access Control parameters

Field	Description	
WAN	Select a connection from the list.	
Trusted Network Enable	Click to enable or disable trusted network.	
ICMP, Telnet, SSH, HTTP, TR-069, HTTPS, SFTP	Select an access control level for each protocol: WAN side: Allow, Deny, or Trusted Network Only LAN side: Allow or Deny	

3 —

Click Save.

You can click **Refresh** to display up-to-date information.

4 –

Optionally, add one or more subnet trusted networks.

The maximum number of entries is 32.

You can also use the Source IP fields to delete a previously created entry for a subnet trusted network.

Table 8-35 Trusted Network parameters

Field	Description
Source IP Start Enter a start IP address for the new subnet trusted network.	
Source IP End	Enter an end IP address for the new subnet trusted network.

5 —

Click Add.

END OF STEPS -

Configuring the Application

8.40 Overview

8.40.1 Purpose

This chapter describes the application configuration tasks supported by the G-1425G-A ONTs.

8.40.2 Contents

8.40 Overview	162
8.41 Configuring port forwarding	162
8.42 Configuring port triggering	164
8.43 Configuring DDNS	165
8.44 Configuring NTP	167
8.45 Configuring UPnP and DLNA	168
8.46 Configuring voice	169

8.41 Configuring port forwarding

Maintenance

8.47 Overview

8.47.1 Purpose

This chapter describes the maintenance tasks supported by G-1425G-A ONTs.

8.47.2 Contents

8.47 Overview	171
8.48 Configuring the password	171
8.49 Configuring LOID	173
8.50 Configuring SLID	174
8.51 Managing the device	175
8.52 Backing up the configuration	176
8.53 Restoring the configuration	176
8.54 Upgrading firmware	177
8.55 Rebooting the device	178
8.56 Resetting to factory defaults	179
8.57 Diagnosing WAN connections	180
8.58 Viewing log files	182

8.48 Configuring the password

A password must adhere to the password rules, which are as follows:

- the password may consist of uppercase letters, lowercase letters, digital numbers, and the following special characters ! # + , - / @ _ : =]
- the password length must be from 8 to 24 characters
- the first character must be a digital number or a letter
- the password must contain at least two types of characters: numbers, letters, or special characters
- the same character must not appear more than 8 times in a row

When the password meets the password rules, the application displays the message "Your password has been changed successfully".

When the password does not meet the password rules, the application displays a message to indicate which password rule has not been followed, for example:

- · the password is too short
- · the password is too long

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use.

- the first character cannot be a special character
- there are not enough character classes
- 1 —

9 ONT configuration file over OMCI

9.1 Overview

9.1.1 Purpose

9.1.2 Contents

9.1 Overview	187
9.2 Purpose	187
9.3 Supported configuration file types	187
9.4 ONT configuration file over OMCI	190

9.2 Purpose

This procedure describes how to use configuration files over OMCI to configure ONTs. Some advantages include:

- · flexibility to change the ONT default behavior by downloading configuration file
- flexibility to update a deployed ONT by downloading updated parameters
- · ability to securely download any configuration file to an ONT
- ability to avoid using embedded configuration files in ONT software

Note: This feature is supported for use with the 7360 ISAM FX and the 7342 ISAM FTTU.

9.3 Supported configuration file types

Table 9-1, "Supported configuration files" (p. 188) describes the configuration file types that are supported from Nokia ONT R05.02.00 and later.

Table 9-1 Supported configuration files

File Index	Description	Details	Supported ONTs/DPU
PRE	ONT pre-configuration file	The XML-based PRECONFIG file controls the working mechanics of the ONT for various services. The default behavior of different ONTs may vary based on the factory settings. The pre-configuration file includes the factory default value for the residential gateway. Note: the pre-configuration file does not work with SFU ONTs; therefore, this feature applies only to Residential Gateway ONTs. The pre-configuration file can be used as is, but Nokia provides its customers with the flexibility to customize the pre-configuration file. This pre-configuration file enables operators to change the default behavior by downloading a customized pre-configuration based on customer inputs. This PRE XML file includes a custom OPERID. The Nokia defined index for the PRECONFIG file is: "PRE"	All Nokia GPON and 10 GPON ONT.
CFG	ONT configuration delta file	The XML-based CFG file updates the configurable parameters (the PRE settings) in the existing PRE file of a deployed ONT, where required. This configuration file enables operators to change the deployed behavior by downloading customized updates in the CFG file. This file is used only to modify the parameters in the PRE file; it is not used for service provisioning. No OPERID is required, because the update is based on the OPERID used for the PRE file. The Nokia defined index for the PRECONFIG DELTA file is: "CFG"	All Nokia GPON and 10GPON ONT.
XML	Voice XML file	The Voice XML file provides an alternate method for securely downloading voice parameters from the OLT, rather than using FTP (OMCIv1/OMCIv2) or HTTPS (TR-069). Downloading this file makes the applicable changes in the voice parameters. This file enables operators to change the voice behavior by downloading the updated voice XML file. Nokia recommends using this procedure, rather than embedded voice XML files. The Nokia defined index for the Voice XML file is: "XML"	All Nokia GPON and 10 GPON ONT.

File Index	Description	Details	Supported ONTs/DPU
GFT	G.fast-related configuration file	This text-based json script file controls the default behavior of the G.Fast ONT. This file includes the provisioning parameters of the G.fast transports layer; it does not include VLAN or QoS provisioning. While the ONT functions well with the default values; they can optionally be customized. While default values can work in VDSL mode, a download file is required for the device to function as a G.fast ONT. The Nokia defined index for the G.fast file is: "GFT"	Nokia G.fast.

Table 9-1 Supported configuration files (continued)

9.3.1 Filename conventions

Nokia provides the raw configuration files, which must be saved by the operator in a TAR file to be uploaded. TAR file names must be unique.

The filenames of the raw configuration files may not adhere to the naming conventions outlined below. In this case, the files must be renamed to adhere to the naming conventions before the operator generates the TAR file. Filenames are not case-sensitive.

ABCXXXXVER

where

ABC is the file index type (PRE, CFG, XML, GFT)

XXXX is the operator ID

For PRE and CFG, a valid operator ID is required

For XML and GFT, any characters may be used

VER is the file version (from 001 to 999)

Note: you cannot update the configuration using two files with the same name.

9.3.2 Download configuration file

The following table provides the supported download options for ONT pre-configuration file and configuration file.

ONT type	Legacy method download		Zero management download	
	PRE file	CFG file	PRE file	CFG file
Broadlight(eg.I240WA- 3FE54869AFGA80)	_	1	_	1
Broadcom(eg.G240WB- 3FE56773BFGA07)	_	1	1	1

Table 9-2 Download configuration files

Table 9-2 Download configuration files (continued)

ONT type	Legacy method download		Zero management download	
	PRE file CFG file		PRE file	CFG file
MTK(eg.G240WF)	—	\checkmark	\checkmark	\checkmark

9.4 ONT configuration file over OMCI

WARNING

Equipment Damage

Executing the following procedure will trigger the ONT to reboot, which will impact ongoing services.

Use this procedures to configure ONTs using configuration files via legacy method and OMCI.

9.4.1 Configuring an ONT using a configuration file via legacy method

1

Upload the ABCXXXXVER TAR file to the /ONT/ directory in the OLT.

A maximum of 250 files can be kept in the OLT file system.

2

Using OLT commands, download the TAR file to the ONT.

For OLT commands, refer to the 7360 ISAM FX CLI Command Guide for 100_320Gbps FD NT and FX NT, or the **7342 ISAM FTTU Operation and Maintenance Using TL1 and CLI**. Please note:

- pri-cfgfile-pland/dnload or sec-cfgfile-pland/dnload can be 1 to 14 characters.
- pri-cfgfile-pland and pri-cfgfile-dnload should be the same name.

Examples

Note: X can be 1 or 2 unless specified:

a. If pland-cfgfileX= Disabled and dnload-cfgfileX= Disabled ,

no file will be downloaded to the ONT.

b. If pland-cfgfileX=FILENAME1 and dnload-cfgfileX= Disabled ,

FILENAME1 will be downloaded and FILENAME1 will be made active. An ONT reboot is required.

c. If pland-cfgfileX=Disabled and dnload-cfgfileX= FILENAME2

FILENAME2 will be downloaded and FILENAME2 will be made passive. An ONT reboot is not required.

d. If **pland-cfgfileX=FILENAME3** and **dnload-cfgfileX=FILENAME 4**, the OLT reports an error because the filenames are not the same.

e. Configure equipment interface pland-cfgfile1=XMLXXXXX1 and dnload-cfgfile1 XMLXXXXX1

Configure equipment interface **pland-cfgfile2=XMLXXXXX2** and **dnload-cfgfile2 XMLXXXXX2**

Although the OLT permits the above two steps without reporting an error, Nokia does not recommend executing them, because the ONT may exhibit unexpected behavior.

f. If pland-cfgfileX=Auto and dnload-cfgfileX= Auto

The OLT will download the XML file from "sw-ctr-list" (configure equipment ont sw-ctrl)

END OF STEPS

The ONT will distribute the configuration files to the different services based on the active indication from the OLT and on the Nokia defined index.

The ONT automatically reboots to apply the configuration files. After the ONT reboots and reports the active version, the OLT completes the file download procedure.

Operators must check the committed file from the OLT to verify whether the corresponding file has been applied. If an error occurs, contact Nokia for support.

9.4.2 Configuring an ONT using a configuration file via OMCI

1

Generate the TAR file to be uploaded to the OLT.

Using the raw configuration file(s) provided by Nokia, generate the TAR file as follows:

- a. On a Linux platform, rename the raw configuration file to adhere to the naming convention, as described in section 9.3 "Supported configuration file types" (p. 187).
- b. Tar the ABCXXXXVER raw configuration file:

tar -cf ABCXXXXVER.tar ABCXXXXVER

Where

ABCXXXXVER

Is the name of the file created in step i.

This creates two files: ABCXXXVER and ABCXXXVER.tar.

- c. Rename ABCXXXXVER to ABCXXXXVER.org
- d. Remove the ".tar" extension from ABCXXXVER.tar file.
- 2 -

Upload the ABCXXXVER TAR file to the /ONT/ directory in the OLT. A maximum of 250 files can be kept in the OLT file system.

3

Using OLT commands, download the TAR file to the ONT. For OLT commands, refer to the 7360 ISAM FX CLI Command Guide for 100_320Gbps FD NT

© 2021 Nokia. Nokia Confidential Information Use subject to agreed restrictions on disclosure and use.

and FX NT, or the **7342 ISAM FTTU Operation and Maintenance Using TL1 and CLI**. Please note:

- pri-cfgfile-pland/dnload or sec-cfgfile-pland/dnload can be 1 to 14 characters.
- pri-cfgfile-pland and pri-cfgfile-dnload should be the same name.

Examples

Note: X can be 1 or 2 unless specified:

a. If pland-cfgfileX= Disabled and dnload-cfgfileX= Disabled ,

no file will be downloaded to the ONT.

b. If pland-cfgfileX=FILENAME1 and dnload-cfgfileX= Disabled ,

FILENAME1 will be downloaded and FILENAME1 will be made active. An ONT reboot is required.

c. If pland-cfgfileX=Disabled and dnload-cfgfileX= FILENAME2

FILENAME2 will be downloaded and FILENAME2 will be made passive. An ONT reboot is not required.

- d. If **pland-cfgfileX=FILENAME3** and **dnload-cfgfileX=FILENAME 4**, the OLT reports an error because the filenames are not the same.
- e. Configure equipment interface pland-cfgfile1=XMLXXXXX1 and dnload-cfgfile1 XMLXXXXX1

Configure equipment interface pland-cfgfile2=XMLXXXXX2 and dnload-cfgfile2 XMLXXXXX2

Although the OLT permits the above two steps without reporting an error, Nokia does not recommend executing them, because the ONT may exhibit unexpected behavior.

f. If pland-cfgfileX=Auto and dnload-cfgfileX= Auto

The OLT will download the XML file from "sw-ctr-list" (configure equipment ont sw-ctrl)

END OF STEPS

The ONT will distribute the configuration files to the different services based on the active indication from the OLT and on the Nokia defined index.

The ONT automatically reboots to apply the configuration files. After the ONT reboots and reports the active version, the OLT completes the file download procedure.

Operators must check the committed file from the OLT to verify whether the corresponding file has been applied. If an error occurs, contact Nokia for support.
