1 General Specifications

The module provides a complete solution for a high-performance integrated wireless and Bluetooth device. It provides SDIO interface for WiFi and HS-UART interface for Bluetooth. The module complies with IEEE 802.11 a/b/g/n/ac 2T2R MIMO standard, and Maximum PHY data rate up to 173.3 Mbps using 20 MHz bandwidth, 400 Mbps using 40 MHz bandwidth, and 866.7 Mbps using 80 MHz bandwidth.

2 Features

2.1 WLAN

- Supports 802.11ac 2x2, Wave-2 compliant with MU-MIMO
- Completes 802.11n MIMO solution for 2.4GHz and 5GHz band
- Maximum PHY data rate up to 173.3Mbps using 20MHz bandwidth, 400Mbps using 40 MHz bandwidth, and 866.7Mbps using 80MHz bandwidth
- ♣ Backward compatible with 802.11a/b/g devices while operating at 802.11n data rates
- Backward compatible with 802.11a/n devices while operating at 802.11ac data rates
- Complies with SDIO 1.1/2.0/3.0 for WLAN with clock rate up to 208MHz
- support standard SDIO v3.0 (up to SDR104 mode at 208 MHz) host interfaces
- complies with HS-UART with configurable baud rate for Bluetooth
- ❖ IEEE 802.11a/b/g/n/ac compatible WLAN
- ❖ IEEE 802.11e QoS Enhancement(WMM)
- FIEEE 802.11i (WPA, WPA2). Open, shared key and pair-wise key authentication
- ❖ IEEE 802.11h DFS, TPC, Spectrum Measurement
- ❖ IEEE 802.11k Radio Resource Measurement
- Channel management and co-existence
- Wi-Fi Direct supports wireless peer to peer
- CCA on secondary through RTS/CTS handshake
- Supports TCP/UDP/IP checksum offload
- Two Transmit and Two Receive paths
- ❖ 5MHz/10MHz/20MHz/40MHz/80MHz bandwidth transmission
- Supports 2.4GHz and 5GHz band channels

- Short Guard Interval(400ns)
- Sounding packet

2.2 Bluetooth

- Compatible with Bluetooth v2.1 and v3.0 Systems
- Supports Bluetooth 4.1 features
- Supports Bluetooth 4.2 LE Secure Connection by upper layer software upgrade
- Support Bluetooth 5.0 and LE 5.0 system
- Supports all packet types in basic rate and enhanced data rate
- Supports pico-nets in a scatter-net
- Supports Secure Simple Pairing
- ❖ Bluetooth 5.0 Dual Mode support: Simultaneous LE and BR/EDR

13 Reference design

13.1 Power supply requirement

The module power supply voltage is DC+3.3V, and the maximum module current is 800mA. The power supply design needs to consider the output current and power interference. To avoid the +3.3V power supply from interfering with other circuits on the motherboard, it is recommended to supply to the module using the regulator circuit alone, the recommended DC-DC circuit structure shown in the figure below. A 4.7uF~10uF capacitor is connected in parallel at 3_3VD output to filter out the interference. A bead is connected in series at 3_3VD output. The bead and capacitor must be placed as close to the module as possible. If you need to share +3.3V with other circuits, consider whether the current of the shared power supply is sufficient.

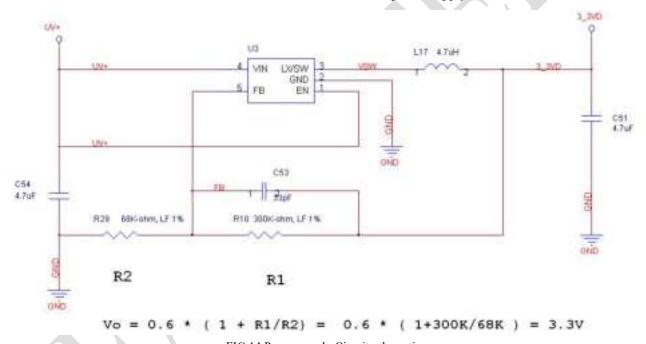

FIG 14 Power supply Circuit schematic

Table 9 DC Characteristics

Symbol	Parameter	Minimum	Typical	Maximum	Peak Current
VDD_3.3V (PIN36)	3.3V Supply Voltage	3.0V	3.3V	3.6V	0.8A

Table 10 Platform Power Rail Requirements

VDD_3.3V	VDD_3.3V	VDD_3.3V	Rise time		
Power range	Ripple	Noise	Min	Max	

13.2 System power on sequrence

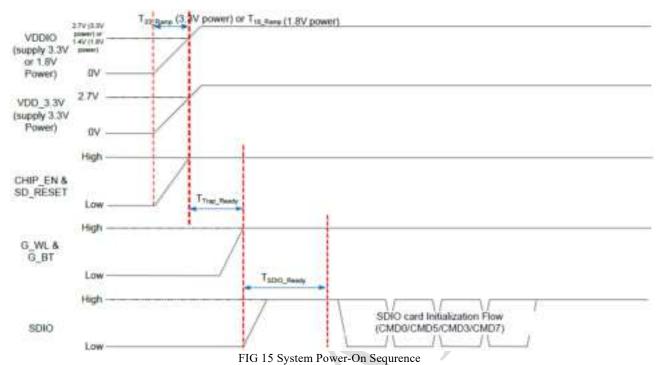

Table 11 System Power-On Timing Parameters

	Min.	Typical	Max.	Unit	Description
T _{18_Ramp/} T _{33_Ramp}	0.5	1.5	5	ms	The 3.3V or 1.8V power ramp up duration.
T _{Trap_Ready}	400	500	-	ms	WLAN eFuse autoload. $T_{Trap_Ready} = 500ms$ (Typical)
TSDIO_Ready	10	20	100	ms	SDIO Not Ready Duration. In this state, the module may respond to commands without the ready bit being set. After the ready bit is set, the host will initiate complete card detection procedure.

E-mail: sales@eardatek.com

13.3 System power off sequrence

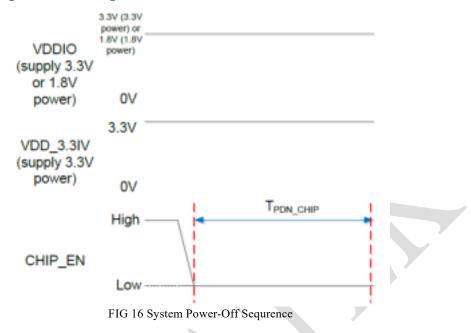

Table 12 System Power-Off Timing Parameters

	Min.	Typical	Max.	Unit	Description
TPDN_CHIP	100	100	4	ms	CHIP_EN keep low duration

13.4 SDIO Interface

The SDIO interface has 4 data lines, a cock signal line and a command signal line. all of the SDIO lines must be equal length. In order to avoid mutual interference, SDIO lines should be avoided to be adjacent and parallel to other data lines, RF lines and power lines, and Surround the data line and clock line with ground copper.

13.5 RF circuit

Due to the SMD package, the RF port impedance must be offset after the module is soldered to the motherboard. In order to achieve the best performance,, it is recommended to add a PI-type matching network to the motherboard, as shown below (C11, R21,C6). The value of the PI type matching network needs to be debugged according to the actual motherboard to match RF port impedance to 50 Ohm.

E-mail: sales@eardatek.com

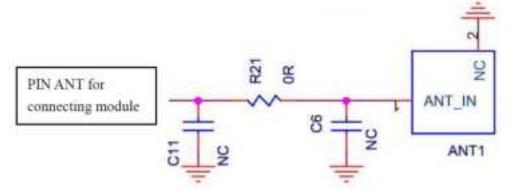

FIG 17 Connect 50 Ohm matching antenna reference circuit

The antenna ANT1 in the figure above must be 50 Ohm. If the antenna is not matched, it is recommended to add a set of PI type matching network at the front of the antenna to match the antenna. Generally, the antenna manufacturers will give Suggestions on matching parameters.

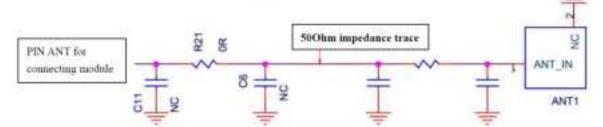

FIG 18 Connect the unmatched antenna reference circuit

The RF line layout should be matched according to 50ohm. The line impedance is related to the plate, plate thickness, line width and copper spacing. Professional software can be used to calculate the line width. Note: for multilayer plates, the plate thickness should calculate the distance from RF routing layer to GND of the next layer. There are RF lines Layout principles:

- 1. RF line layout needs to match 50 ohms. The line width can be calculated by professional software. (Note: If it is a multi-layer board, The board thickness should calculate the distance from the RF trace layer to the next ground layer.)
 - 2. The RF line must be surrounded by ground copper and ground holes.
- 3. The PI-type matching circuit for adjusting the impedance of the module is placed close to the module. The PI type matching circuit for matching the antenna is placed close to the antenna.

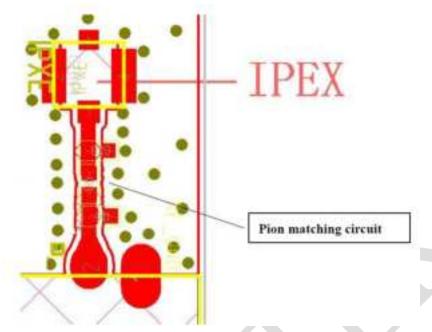

FIG 19 The PI type matching circuit Layout

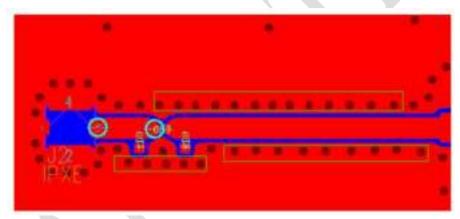

FIG 20 The RF line Layout

13.6 Application Circuit for SD RESET and BT DIS N with Platform

There is internal pull-up, about 100K, resistor design in Module SD_RESET (Pin44) and BT_DIS_N (Pin38) pad. If Host SOC need to control these pins, it is recommended to choose host GPIO without pull capability to avoid voltage divider. Middle range of IO voltage would affect Module booting up (FIG 21).

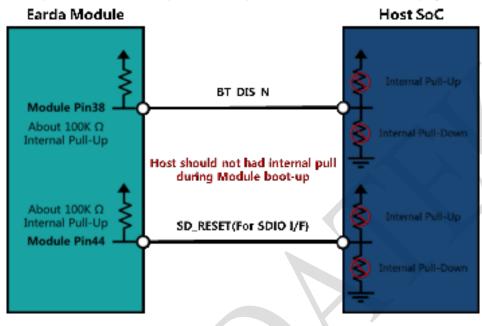

FIG 21 Host GPIO control WL REG ON and BT REG ON

If the GPIO connected to SD_RESET and BT_DIS_N by the host has pull-down capability and it can't be avoided), suggest to add $10K\Omega$ Pull-Down resistor in circuit to ensure IO is in low level. In this way, Module internal Pull-Up $100K\Omega$ could be neglected (FIG 22). Please note external Pull-Down will cause additional static current. BT_DIS_N exists only high level and low level during power-on. Other uncertain voltage values may cause BT to fail to open.

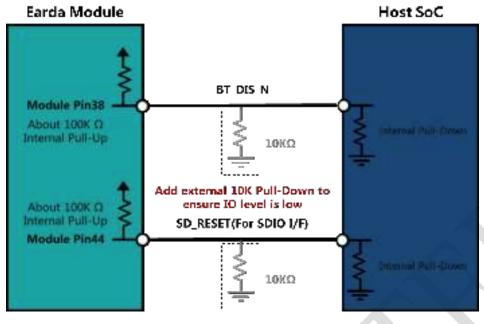

FIG 22 Add external pull down resistor to ensure low level

13.7 PTA interface design reference

EWN-8822CSS3DA supports 3-wire PTA (Packet Traffic Arbitration) interface, and the interface design reference is as follows:

Table 13 Pin Connection Description

Wi-Fi M	odule	Other PTA Devices
LTE_COEX1(Pin25)	No Pull	PTA_COEX_BT_STAT
LTE_COEX2(Pin26)	No Pull	PTA_COEX_BT_ACT
LTE_COEX3(Pin33)	No Pull	PTA_COEX_WL_ACT

If the surface space is sufficient, it is recommended to reserve series and Pull-Up, Pull-Down resistance for the motherboard.

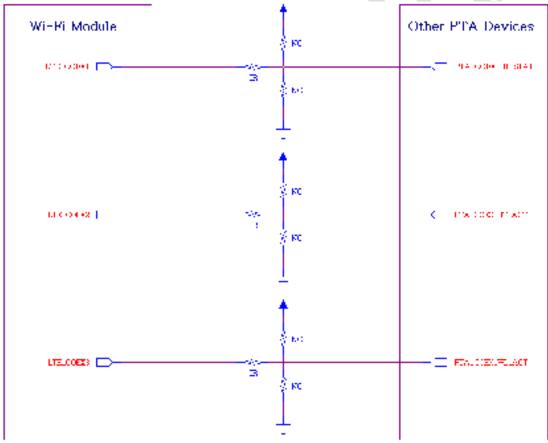

FIG 23 PTA interface design reference

13.8 Motherboard interference avoidance

Motherboard interference comes from: high-speed data interface (HDMI), the Operating frequency of main chip, DDR, DC-DC power supply. The method of avoiding interference according to the characteristics of various signals is also different. The main methods of interference avoidance include:

- 1. keeping away from the source of interference;
- 2. Adding shields to avoid interference leakage;
- 3. Reasonable layout to eliminate interference.

13.8.1 Interface interference

When HDMI uses the 74.2MHz frequency, its 33x frequency is in the 2.4G band of Wi-Fi, which will seriously interfere with the Wi-Fi signal. If the HDMI frequency is 148.5MHz, although the 16x frequency is not in the Wi-Fi band, the isolation of the frequency is not good, and the Wi-Fi signal will be interfered to some extent. If the distance between the HDMI interface and the Wi-Fi module on the PCB is less than 5cm, the HDMI output display will interfere with the Wi-Fi signal, resulting in problems such as Wi-Fi connection failure and throughput drop. Therefore, keep the location of the Wi-Fi module away from the HDMI port on the hardware layout to avoid interference.

At the same time, if the Wi-Fi antenna is built-in the motherboard, its placement must also be carefully considered to be far from the interface interference. If the antenna is placed in an incorrect position, even if the module is shielded, the interference signal is coupled through the antenna, which will eventually result in a lower Wi-Fi throughput. (Note: In addition to interference, the placement of the internal antenna should also evaluate the effect of the metal interface, motherboard, and housing material on the antenna impedance.)

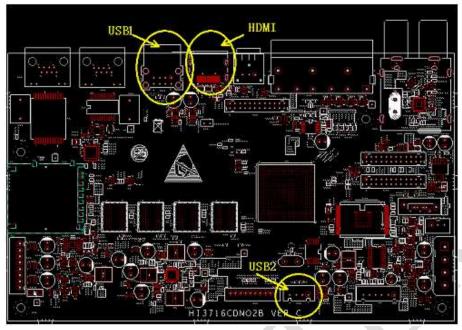

FIG 24 HDIM and USB interference

13.8.2 The main chip interferes with DDR

Because the main chips operate at about 800MHz or DDR2 operate at 667MHz, 3x frequency of 800MHz and 4x frequency of 667MHz are near 2.4GHz band. It must to place Wi-Fi modules and antennas far away from the main chip and DDR. It is strongly recommended that the main chip be isolated from the DDR by a shield. As shown in the figure below.

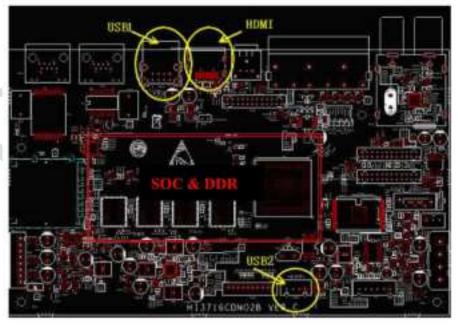

FIG 25 Main chip and DDR interference

13.9 Recommended secondary reflux temperature curve

The number of reflux shall not exceed 2 times, and the tin feeding height of the half hole of the module shall be no less than 1/4.

The lead-free reflux curve requirements of Wi-Fi module products are shown in FIG 26:

Stage	Note	Pb-free assembly	
Average ramp-up rate	T _L to Tp	3 °C/ second max.	
Preheat	Temperature min (T _{satio})	150℃	
	Temperature max (Tsmax)	200 €	
	Time (t _{smin} to t _{smax})	60 - 120 seconds	
Time maintained	Temperature(T _L)	217°C	
above	Time (t _L)	60 - 150 seconds	
Peak package bod	y temperature (Tp)	Tp must not exceed the specified classification temp(Tc=245 C).	
Time(tp) within 5°C of the specified classification temperature (Tc)		30 seconds	
Ramp-down rate (Tp to TL)		6 °C / seconds max.	
Time 25°C to peak	temperature	8 minutes max.	
and the second s		A STATE OF THE STA	

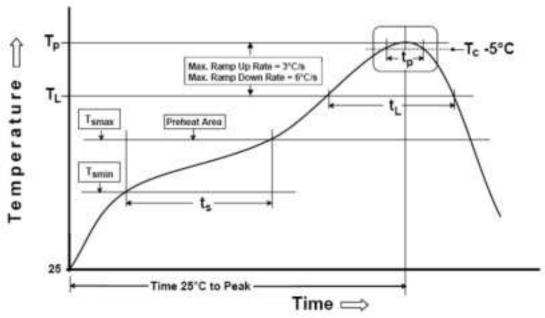

FIG 26 Furnace temperature curve

NOTE:

1. The maximum furnace temperature of the module is 260 °C, don't exceed this temperature.

2. The gold plating thickness of the module pad is 2u".

14 Revision History

Revision	Release Date	Summary	Revised By
V1.0	2023-11-09	First release	Shuize Wang
V1.1	2023-12-05	Update module photos	Jisheng Wang

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursua nt to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful inte rference in a residential installation. This equipment generates uses and can radiate radio frequency energy a nd, if not installed and used in accordance with the instructions, may cause harmful interference to radio com munications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turn ing the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help important announcement Important Note:

Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. Country Code selection feature to be disabled for products marketed to the US/Canada.

This device is intended only for OEM integrators under the following conditions:

- 1. The antenna must be installed such that 20 cm is maintained between the antenna and users, and
- 2. The transmitter module may not be co-located with any other transmitter or antenna,
- 3. For all products market in US, OEM has to limit the operation channels in CH1 to CH11 for 2.4G band by supplied firmware programming tool. OEM shall not supply any tool or info to the end-user regarding to Regulatory Domain change. (if modular only test Channel 1-11)

As long as the three conditions above are met, further transmitter testing will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

Important Note:

In the event that these conditions cannot be met (for example certain laptop configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization.

End Product Labeling

The final end product must be labeled in a visible area with the following" Contains FCC ID: **2AMM6EWN8822CSS3DA** "

Manual Information to the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

Module: EWN-8822CSS3DA

Integration instructions for host product manufacturers according to KDB 996369 D03 OEM

Manual v01r01

2.2 List of applicable FCC rules

CFR 47 FCC PART 15 SUBPART C has been investigated. It is applicable to the modular transmitter

2.3 Specific operational use conditions

This module is stand-alone modular. If the end product will involve the Multiple simultaneously transmitting condition or different operational conditions for a stand-alone modular transmitter in a host, host manufacturer have to consult with module manufacturer for the installation method in end system.

2.4 Limited module procedures

Not applicable

2.5 Trace antenna designs

Not applicable

2.6 RF exposure considerations

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

2.7 Antennas

This radio transmitter **FCC ID: 2AMM6EWN8822CSS3DA** has been approved by Federal Communications Commission to operate with the antenna types listed below, with the maximum permissible gain indicated. Antenna types not included in this list that have a gain greater than the maximum gain indicated for any type listed are strictly prohibited for use with this device.

Antonno No	Model No. of	Time of automas	Gain of the ar	ntenna (Max.)		
Antenna No. antenna:		Type of antenna:	Antenna 1	Antenna 2	Frequency range:	
Bluetooth	/	PCB Antenna	5.25	N/A	2402-2480MHz	
2.4G Wi-Fi	/	PCB Antenna	3.29	3.29	2412-2462MHz	
U-NII-1	/	PCB Antenna	4.93	4.93	5180-5240MHz	
U-NII-2A	/	PCB Antenna	5.40	5.40	5260-5320MHz	
U-NII-2C	/	PCB Antenna	5.55	5.55	5500-5720MHz	
U-NII-3	/	PCB Antenna	5.44	5.44	5745-5825MHz	

2.8 Label and compliance information

The final end product must be labeled in a visible area with the following"

Contains FCC ID: 2AMM6EWN8822CSS3DA ".

2.9 Information on test modes and additional testing requirements

Host manufacturer is strongly recommended to confirm compliance with FCC requirements for the transmitter when the module is installed in the host.

2.10 Additional testing, Part 15 Subpart B disclaimer

Host manufacturer is responsible for compliance of the host system with module installed with all other applicable requirements for the system such as Part 15 B.

2.11 Note EMI Considerations

Host manufacture is recommended to use D04 Module Integration Guide recommending as "best practice" RF design engineering testing and evaluation in case non-linear interactions generate additional non-compliant limits due to module placement to host components or properties.

2.12 How to make changes

This module is stand-alone modular. If the end product will involve the Multiple simultaneously transmitting condition or different operational conditions for a stand-alone modular transmitter in a host, host manufacturer have to consult with module manufacturer for the installation method in end system. According to the KDB 996369 D02 Q&A Q12, that a host manufacture only needs to do an evaluation (i.e., no C2PC required when no emission exceeds the limit of any individual device (including unintentional radiators) as a composite. The host manufacturer must fix any failure.
