Safety precautions

NOTE:

Review these operating instructions and safety precautions carefully before use.

Do not use mobile phone in hospitals or in the vicinity of medical devices, such as pacemakers or hearing aids. Mobile phones may interfere with the operation of these devices. Keep a minimum distance of 6–8" between pacemaker and mobile phone. When using the mobile phone hold it to the ear farthest from the pacemaker.

Always use the handsfree kit to make calls while driving (p. 131).

Turn off mobile phone while aboard any aircraft. To prevent accidental activation, see (p. 92).

Do not use mobile phone near gas stations, fuel depots, chemical plants or blasting operations. Mobile phones may cause interference with the operation of technical installations.

The ring tone and hands-free speaker are reproduced through the earpiece. Never hold the handset to your ear when the handset is ringing or when using the hands-free speaker mode. Serious and permanent damage could occur to your hearing!

Caution! SIM card may be removed. Small parts could be swallowed by children.

Do not exceed the mains voltage (V) specified on the power supply unit.

Do not use an optical magnifier to look at the activated infrared interface [Class 1 LED product (classification as per IEC 60825-1)].

Only use original Siemens batteries (100% mercury-free) and charging devices. Use of non-Siemens batteries and/or charging devices may cause explosion resulting in serious injury or property damage.

It is recommended that you open the phone only to replace the battery (100% mercury-free) or SIM card. Do not open the battery under any circumstances. Any other changes to this device may invalidate the FCC authorization required for operation of the unit, and are strictly prohibited.

Dispose of used batteries and phones in accordance with applicable laws and safety regulations.

Safety precautions

Mobile phones may interfere with the operation of nearby TVs, radios or PCs.

For body worn operation, this mobile phone has been tested and meets FCC RF exposure guidelines when used with a carry accessory that contains no metal and that positions the handset at least 0.001 cm from the body. Use of other carry accessories may not ensure compliance with FCC RF exposure guidelines.

Only use original Siemens accessories in order to avoid possible injury and property damage and to ensure compliance with applicable laws and regulations.

Improper use invalidates the warranty!

Safety Information

Important

Read this information before using your wireless handheld phone.

As this mobile phone is equipped with a fixed (non-retractable) antenna, some paragraphs in the below text may not be applicable.

Antenna care

Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the phone and may violate FCC regulations.

Phone operation

Normal position

Hold the phone as you would any other telephone with the antenna pointed up and over your shoulder.

Tips on efficient operation

For your phone to operate most efficiently:

- · Extend your antenna fully (if applicable).
- Do not touch the antenna unnecessarily when the phone is in use. Contact with the antenna affects call quality and may cause the phone to operate at a higher power level than otherwise needed.

Driving

Laws pertaining to the use of mobile phones while driving vary significantly from state-to-state and sometimes even from locality-to-locality within states. For example, some areas may allow persons to use their mobile phones only if they employ a hands-free device, and some areas may prohibit the use of mobile phones entirely. Accordingly, Siemens recommends that persons check the laws for the areas in which they drive or will be driving. For areas where the use of mobile phones while driving is permitted, Siemens encourages persons to use their phones responsibly and to employ hands-free devices. Also, if using your phone while driving, please:

- Give full attention to driving driving safely is your first responsibility;
- Use hands-free operation, if available;
- Pull off the road and park before making or answering a call, if driving conditions so require.
- Review the Ten Driving Safety Tips set forth on p. 139.

Safety Information

For vehicles equipped with Air Bags

An air bag inflates with great force. DO NOT place objects, including either installed or portable wireless equipment, in the area over the air bag or in the air bag deployment area. If in-vehicle wireless equipment is improperly installed and the air bag inflates, serious injury could result.

Electronic devices

Most modern electronic equipment is shielded from radiofrequency (RF) signals. However, certain electronic equipment may not be shielded against the RF signals from your wireless phone.

Pacemakers

The Health Industry Manufacturer's Association recommends that a minimum separation of six inches (6") be maintained between a handheld wireless phone and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with the independent research by and recommendations of Wireless Technology Research.

Persons with pacemakers

- should ALWAYS keep the phone more than six inches from their pacemaker when the phone is turned ON;
- should not carry the phone in a breast pocket;
- should use the ear opposite the pacemaker to minimize the potential for interference:
- should turn the phone OFF immediately if there is any reason to suspect that interference is taking place.

Hearing Aids

Some digital wireless phones may interfere with some hearing aids. In the event of such interference, you may want to consult your service provider or your hearing aid manufacturer to discuss alternatives.

Other Medical Devices

If you use any other personal medical devices, consult the manufacturers of your devices to determine if they are adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information.

Turn your phone OFF in health care facilities when any regulations posted in these areas instruct you to do so. Hospitals or health care facilities may be using equipment that could be sensitive to external RF energy.

Vehicles

RF signals may affect improperly installed or inadequately shielded electronic systems in motor vehicles. Check with the manufacturer or its representative regarding your vehicle. You should also consult the manufacturer of any equipment that has been added to your vehicle.

Posted Facilities

Turn your phone OFF in any facility where posted notices so require.

Airplanes

FCC and Airline Regulations prohibit using your phone while in the air. Turn your phone OFF before boarding an airplane.

Check and comply with the policy of your airline regarding the use of your phone while the airplane is on the ground.

Blasting areas

To avoid interfering with blasting operations, turn your phone OFF when in a "blasting area" or in areas posted: "Turn off two-way radio." Obey all signs and instructions.

Potentially explosive atmospheres

Turn your phone OFF when in any area with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death.

Areas with a potentially explosive atmosphere are often but not always clearly marked. They include: fueling areas such as gasoline stations; below deck on boats; fuel or chemical transfer or storage facilities; vehicles using liquefied petroleum gas (such as propane or butane); areas where the air contains chemicals or particles, such as grain, dust or metal powders; and any other area where you would normally be advised to turn off your vehicle engine.

Emergency calls (SOS)

Your wireless phone can be used to make emergency calls. You can make an emergency call from the main display screen. Enter the local emergency number such as 911 and then press the key.

This phone, like any wireless phone, operates using radio signals, wireless and landline networks, and userprogrammed functions. Because of this, connections in all conditions cannot be guaranteed. Therefore, you should never rely solely on any wireless phone for essential commu-

nications (for example, medical emergencies). Remember - to make or receive any calls, the phone must be switched on and be used in a service area that has adequate signal strength. Emergency calls might not be possible on all wireless phone networks or when certain network services or phone features are in use. Check with local service providers regarding their network features.

phone is properly charged before attempting any emergency calls. If you allow your battery to discharge, you will be unable to receive or make calls, including emergency calls. You must then wait a few minutes after the charging begins to place any emergency calls.

Always make certain that your

When making an emergency call, remember to give all of the necessary information as accurately as possible. Remember that your wireless phone might be the only means of communication at the scene of an accident, therefore you should not terminate the call until given permission to do so.

SAR (Cell Phone Designation)

RF EXPOSURE /SPECIFIC ABSORPTION RATE (SAR) INFORMATION

THIS SIEMENS SL56 PHONE MEETS THE GOVERNMENT'S REQUIRE-MENTS FOR EXPOSURE TO ELECTRO-MAGNETIC FIELDS.

Your cell phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy established by the Federal Communications Commission (FCC) of the U.S. Government and by Health Canada. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines were developed and confirmed by independent scientific organizations through periodic and thorough evaluation of scientific studies*. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The exposure standard for cell phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit established by the FCC and by Health Canada is 1.6 W/kg**. Tests for SAR are conducted using standard operating positions accepted by the FCC and by Industry Canada with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified

power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station, the lower the power output. Before a phone model is available for sale to the public, it must be tested and the manufacturer must certify to the FCC and Industry Canada that it does not exceed the limit established by each government for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body), reported to the FCC and available for review by Industry Canada. The highest SAR value for this model phone when testest for use at the ear is

1.13 W/kg***

and when worn on the body⁺ is 1.11 W/kg***

Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Internet Association (CTIA) web-site at www.phonefacts.net or the Canadian Wireless Telecommunications Association (CWTA) website www.cwta.ca.

SAR information on this Siemens SL56 phone is on file with the FCC and can be found under the Display Grant section of

http://www.fcc.gov/oet/fccid after searching on FCC ID PWX-SL56.

10 SAR (Cell Phone Designation)

While there may be differences between the SAR levels of various phones and at various positions, all Siemens products meet the governmental requirements for safe RF exposure.

- + For body worn operation, this mobile phone has been tested and meets FCC RF exposure guidelines when used with a carry accessory that contains no metal and that positions the handset at least 0.001 cm from the body. Use of other carry accessories may not ensure compliance with FCC RF exposure guidelines.
- * The World Health Organization (WHO, CH-1211 Geneva 27, Switzerland), on the basis of the actual knowledge, does not see any necessity for special precautionary measures when using cell phones.
 Further information:
 www.who.int/peh-emf,
 www.mmfai.org,
 www.my-siemens.com.
 - ** averaged over 1 g of tissue.
- ***SAR values may vary depending on national requirements and network bands. SAR information for different regions can be found at www.my-siemens.com

Getting started

Insert SIM card/battery

The service provider supplies you with a SIM card on which all the important data for your line is stored. If the SIM card has been delivered in credit-card size, snap the smaller segment out and remove any rough edges.

 Press the lock ①, then remove the battery upwards in the direction of the arrow ②.

 Insert the SIM card in the opening with the contact area facing downwards and push gently until it engages below the holder (make sure the angled corner is in the correct position

• Insert the battery in the lower edge **4**, then press downwards **5** until it engages.

Remove SIM card

Remove the battery. First push the SIM card ③ gently through the slot for the holder and at the same time lift it up slightly ② on the other side. Then remove the SIM card completely.

Additional information

Always switch off the phone before removing the battery!

Only 3V SIM cards are supported. Please contact your service provider, if you have an older card.

Functions with SIM cardp. 122

Getting started

Charge battery

The battery is not fully charged when delivered. Plug charger cable into the bottom of the phone, plug power supply unit into a power socket power socket and charge for at least **two hours**.

Display when charging is in progress

During charging.

Charging time

An empty battery is fully charged after about 2 hours. Charging is only possible within the temperature range 41 $^{\circ}$ F to 104 $^{\circ}$ F. At 41 $^{\circ}$ F above or below, the charge icon blinks as a warning. The mains voltage specified on the power supply unit must not be exceeded.

Charge icon not visible

If the battery is totally discharged, no charge icon is displayed when the charger is plugged in. It will appear after two hours at most. In this case the battery is fully charged after 3–4 hours.

Only use the charger provided!

Display while in service

Charge level display during operation (empty-full):

A beep sounds when the battery is nearly empty. The battery level is only shown correctly during an unbroken charging/discharging cycle. You should therefore not remove the battery unnecessarily and where possible not finish the loading process early.

Additional information

The charger heats up when used for long periods. This is normal and not dangerous. Outside your own home networkp. 118 Performance..................p. 119

Switch on, off/PIN entry

Activate/deactivate

Hold **down** On/Off/End key to switch on or off.

Enter PIN

The SIM card can be protected with a 4–8 digit PIN.

Open keypad. Enter the PIN using the number keys. The characters **** are shown, to ensure that nobody can read your PIN on the display. Correct errors with Clear.

OK

Confirm entry with right soft key. Logging on to the network will take a few seconds.

Switching on your phone for the first time

Contrast

Set display contrast.

Time/Date

The clock can be set to the right time once at start-up.

Press.

Open keypad. First enter the date (day/month/ year), then the time (12 hours, including seconds).

OK

Press. The time and date are updated.

Time Zones

Set the time zone for your area.

Select the required time zone from list ...

Set

... press to set.

Additional information

If the battery is removed for longer than seconds, the clock must be reset.

Additional clock settingsp. 82

Switch on, off/PIN entry

Phonebook or Addressbook

You can choose whether you want to use the **Phonebook** on the SIM card or the internal **Addressbook** as standard.

You can copy the SIM card Phonebook to the Addressbook on the phone. Please **do not interrupt this procedure**. During this time **do not accept incoming calls**. Follow instructions on the display.

To copy data on the SIM card at a later time, highlight entries (see p. 117) and copy these with the function "Copy Into "" (Phonebook options menu p. 37).

You can change the standard phone-book at any time (p. 35).

Signal strength.

Strong receive signal.

A weak signal reduces the call quality and may lead to loss of the connection. Change your location.

Emergency number (SOS)

Only to be used in real emergencies!

By pressing the soft key SOS, you can make an emergency call on any network without a SIM card and without entering a PIN (not available in all countries).

Standby mode

When the name of the service provider appears on the display, the phone is in **standby mode** and **ready for use**. If you now close the keypad, the phone remains in standby mode.

The left soft key may have different functions pre-assigned.

Hold **down** the On/Off/End key to return to standby mode from any situation.

Additional information By SIM services (optional).....p. 109

General instructions

User guide

The following symbols are used to explain operation:

Enter numbers or letters.

On/Off/End key.

Call key.

Press the control key on the side indicated

Soft keys.

Displays a soft-key function.

Function dependent on service provider, may require special registration.

Menu controls

The steps needed to reach a function are shown in a **condensed form** in this user guide, e.g. to display call list for missed calls:

This corresponds to:

Menu

Open menu.

From standby mode: press right soft key.

Call Log Select.

Press top of control key.

General instructions

Press.

Press **right** soft key to open the **Call Log** submenu.

Press.

Press right soft key to open the Missed Calls list.

Scroll to the required entry.

Press control key at the bottom to scroll down.

Press.

Press **left** soft key to show phone number with date, time and number of calls.

View

Security

Codes

The phone and SIM card are protected against misuse by several security codes.

Keep these confidential numbers in a safe place where you can access them again if required.

PIN	Protects your SIM card (personal identification number).
PIN2	This is needed to set the charge detail display and to access additional functions requiring special SIM cards.
PUK PUK2	Key code. Used to unlock SIM cards after the wrong PIN has been entered repeatedly.
Phone code	Protects your phone. Must be entered at the first security setting.

Security Menu →

PIN Control

The PIN is usually requested each time the phone is switched on. You can deactivate this feature but you risk unauthorized use of the phone. Some service providers do not permit deactivating the control.

Enter current PIN.

OK Press.

remember

LL OK Repeat new PIN.

Change PIN2

(display only if PIN 2 is available). Proceed as with Change PIN.

Enter new PIN.

Security

Chg.Phonecode

You define and enter the phone code (4–8 digits) when you call up a phone-code protected function for the first time. It is then valid for all phone-code protected functions.

Clear SIM card barring

If the PIN is entered incorrectly three times, the SIM card is barred. Enter the PUK (MASTER PIN), provided by your service provider with the SIM card, according to instructions. If the PUK (MASTER PIN) has been lost, please contact your service provider.

Forward

The waiting call is forwarded, for example, to mailbox.

 Accept the waiting call and end the current call

End the current call.

Answer

Accept new call.

· End both calls

Close keypad.

Calling

Multi Party

Call up to 5 parties one by one and link them together in a conference call. Some of the functions described may not be supported by your service provider or may have to be enabled specially. You have established a connection:

menu

Open menu and select Hold. The current call is put on hold.

Now dial a new number. When the new connection is established ...

... Open menu and select Multi Party. The held call is joined.

Repeat procedure until all participants are linked together (up to 5 participants).

End

All calls in the conference finish simultaneously when the End key is pressed.

Or

Close keypad.

Call menu

The following functions are only available during a call:

menu Open menu.				
Swap	(p. 28)			
Hold	(p. 28)			
Microphone	Switch microphone on/off. If switched off, the person on the other end of the line cannot hear you (muting). Also: hold down.			
Speaker- phone	(p. 28)			
Volume	Adjust handset volume.			
Multi Party	(See above)			
Send DTMF	(p. 115)			
Durat/Charges	Display call duration and (if set, p. 46) costs accuring during the connection.			
Call transfer	The original call is connected to the second one. For you, both calls are now ended.			
Main Menu	Access to main menu.			
Call Status	List all held and active calls (e.g. conference call participants).			

Text entry

Enter text without T9

Press number key repeatedly until the required letter appears. The cursor will jump forward after a brief interval. Example:

Press briefly once for **a**, twice for **b** etc. The first letter in each name is automatically written in upper case.

Hold down to write the number, in this case 2.

Ä,ä/1-9

Special letters and numbers are displayed after the relevant letters.

Press briefly to delete the letter before the cursor, hold down to erase the whole word.

Move the cursor (forwards/back).

Press briefly: Swap between abc, Abc, ^{T9}abc, ^{T9}Abc, ^{T9}ABC, 123. Status shown in top line of display.

Hold down: All input modes are displayed.

Press briefly: Select special characters.

Hold down: Open input menu.

Press once/repeatedly:

.,?!'"0-()@/:_

Hold down: Writes 0.

Writes blank. Press twice = jumps a line.

Special characters

Press **briefly**. The symbols chart is displayed:

1)	ż	i	_	;		,	?	!	+	-
"	,	:	*	1	()	n	¥	\$	£
€	@	١	&	#	[]	{	}	%	~
<	=	>		٨	§	Γ	Δ	Θ	٨	Ξ
π	Σ	Φ	Ψ	Ω						

1) Line skip

Navigate to character.

Select

Press.

Input menu

With text input:

Hold **down**. The input menu is displayed:

Text Format (SMS only)

Mark Text

Copy

Text entry

Text input with T9

"T9" deduces the correct word from the individual key entries by making comparisons with an extensive dictionary.

Activate, deactivate T9

Options Open text menu.

T9 Input Select.

T9 Preferred

Select.

Change Activate T9.

Select Input language

Select the language in which you want to compose your message.

Options

Open text menu.

T9 Input Select.
Input language

select.

Select

Confirm, the new language is set. Languages with T9 support are marked by the T9 symbol.

T9 language versions

If you want to load a dictionary in another language, you will find a large selection to download from the Internet as well as installation instructions under:

www.my-siemens.com/t9

Write a word using T9

Since the display changes as you proceed

it is best if you finish a word without looking at the display.

Simply press the keys **once only** where the relevant letter is located. For "hotel", for example:

press briefly for ^{T9}**Abc** then type

Press. A blank ends a word.

Do not use special characters such as Ä but write the standard character, e.g. A; T9 will do the rest for you.

Additional information

Entering a period finishes a word, if it is followed by a blank. Within a word, a period represents an apostrophe or hyphen:

e.g. provider.s = provider's. Go to the right: Ends the word.

Press briefly: Swap between abc, Abc, ABC, T9abc, T9Abc, T9ABC, 123. Status shown in top line of display.

Hold down: All input modes are displayed.

Press briefly: Select special characters (p. 31).

Hold down: Open input menu (p. 31).

Text entry

T9 word suggestions

If several options are found in the dictionary for a key sequence (a word), the most probable is displayed first. If the word you want has not been recognized, the next suggestion from T9 may be correct.

The word must be highlighted. Then press

again. The displayed word is replaced with a different word. If this word is also incorrect,

press again. Repeat until the correct word is displayed.

If the word you want is not in the dictionary, it can also be written without T9.

To add a word to the dictionary:

Select.

The last suggestion is deleted and the word may now be entered without T9 support. Press Save to add it automatically to the dictionary.

Correct a word

Words written with T9:

Move left or right, word by word, until the required word is highlighted.

Scroll through the T9 word suggestions again.

Clear

Deletes the character to the left of the cursor **and** displays a new possible word!

Words not written with T9:

Move letter by letter to the left/right.

Deletes the letter to the left of the cursor.

Letters are inserted at the cursor position.

Additional information

Within a "T9 word", individual letters may not be edited without first removing T9. In most cases it is better to rewrite the complete word.

▼ Voice mail/Mailbox

Most service providers supply an external voice mail service. A caller may leave a voice message for you in this mailbox

- if your phone is switched off or not ready to receive,
- · if you do not want to answer,
- if you are making a phone call (and Call Waiting is not activated, p. 79).

If voice mail is not part of your service provider's package, you will need to register and settings may have to be made manually. The following description may vary slightly, depending on the service provider.

Settings:

The service provider supplies you with two phone numbers:

Save mailbox number

Call this phone number to listen to the voice mails left for you.

OK Confirm.

Save call forward number

Calls are forwarded to this phone number.

Enter call forward number.

Registration with network. Forward will be confirmed after a few seconds.

Further information on call forward can be found on p. 79.

Listen to

A new voice mail can be announced as follows, depending on the service provider:

<u>~</u>

Icon plus beep.

Or

A text message announces a new voice mail.

Or

You receive a call with an automatic announcement. Call your mailbox and play the message(s) back.

Hold **down** (if necessary enter mailbox number once only). Confirm with OK or Mailbox depending on your service provider.

Away from your home network you may have to dial a different mailbox number and enter a password before you can listen to any messages.

46

Durat/Charges

You can display charge details and the duration of different types of calls while you speak, as well as setting a unit limit for outgoing calls.

Menu → 🗓 → Durat/Charges

Select type of call:

Last Call

All Calls

Remain. units

Select Display the data.

Once displayed you can:

Reset Clear display.

OK End display.

Charge Setting

Menu → □ → Durat/Charges → Charge Setting

Conv.

(PIN 2 prompt)

Enter the currency in which the charge details are to be shown.

Personal Rate

(PIN 2 prompt)

Enter the charges per unit/period.

⊘1

Acct. Limit

(PIN 2 prompt)

Special SIM cards allow you or the service provider to define a credit or a period after which the phone is barred for outgoing calls.

⊗!

Change Press, enter PIN 2.

Acct. Limit Activate.

Enter number of units.

OK Confirm.

Then confirm the credit or reset the counter. The status display for prepaid cards may vary, depending on the service provider.

Auto Display

Call duration and call charges are automatically displayed for each call.

You can transmit and receive very long messages (up to 760 characters) on your phone. These are automatically composed of several "normal" SMS messages (note higher charges).

Additionally you can insert pictures and sounds in an SMS.

Depending on the service provider, e-mails and faxes can also be sent and e-mails received via SMS (change setting if necessary, p. 63).

Writing and sending text messages (SMS)

Menu → 🖂 → New SMS

Text input using "T9" (p. 31) allows you to create longer messages very quickly using just a few key strokes.

Clear Press briefly to delete letter by letter, hold down to delete an entire word.

Press.

Dial number or pick out from the Phonebook/ Addressbook.

Groups SMS to group (p. 49).

OK Confirm. Send the SMS to the service center for transmission. The sent SMS is sayed in the "Sent"

Attributes	Display information on file or folder selected.	
Drive Info	Display the capacity used and available.	
For further services, see File Manager,		

The Multimedia Messaging Service enables you to send texts, pictures (also photos) and sounds in a combined message to another mobile phone or to an e-mail address. All elements of an MMS message are merged to form a "slide show".

Depending on your phone's settings, you will receive either the complete message automatically or notification that an MMS has been saved in the network, giving sender and size details. You may then download it to your phone to read it.

Ask your service provider whether this service is available. You may need to register for this service separately.

Writing/sending MMS messages

An MMS consists of the address header and the content.

An MMS message can consist of a series of pages, each one of which may include a combination of text, sounds and pictures.

Texts can be written with the help of T9 (p. 31).

Pictures and **graphics** that have been produced with accessories such as digital cameras can be attached in JPEG, WBMP, GIF or GIF format. See also File Manager, p. 112.

Music is sent and received in a MIDI file, single tones/sounds in an AMR file. Up to 48 KB can be played back.

Navigation

Scroll line by line with the control key.

Scroll page by page with the plus/ minus side key, by pressing top/bottom.

Input fields:

To: Phone number/

e-mail address of recipi-

ent(s).

Subject: Enter MMS heading (up to

40 characters)

Picture: Insert Press. The picture list is opened for selection

(see also File Manager,

p. 112).

Text: Edit Press. Write text with

the help of T9. Text menu,

see p. 54.

Tones/Alerts:

Insert Press. The music list is opened for selection (see also File Manager, p. 112).

E-mail settings

Before using this service, you must set the server access and your e-mail options. The data for these may already have been entered. If not, your service provider will supply you with the relevant information. See

www.my-siemens.com/sl56

Additional information

Your service provider must support the following protocols for successful data exchange with the e-mail server:

POP3, IMAP4 and SMTP or eSMTP.

E-mails will be MIME-encoded for transmission.

Encryption of e-mail transmission (SSL, APOP) is not possible at present.

Accounts

5 accounts can be defined. If no access data have been defined for the account, the entry card is displayed.

WAP can be used to download applications from the Internet. Downloading or running applications will not affect or change the software already installed on your Java™-enabled cell phone. Siemens excludes all warranty and liability claims in respect of or in connection with any applications subsequently installed by the customer and any software not included in the original delivery package. This also applies to functions enabled subsequently at the customer's instigation. The purchaser bears sole risk for the loss of, damage to, and any defects arising in, this device or the applications or software and for any direct damage or consequential damage of whatever nature resulting from the use of these applications or software. For technical reasons, such applications or software and subsequent enabling of certain functions are lost in the event of the device being replaced/re-supplied and may be lost if it is repaired. In these cases the purchaser will need to download the application again or re-enable it. Siemens does not warranty or guarantee or accept any liability for the customer's ability to download or enable applications again or to do so free of charge.

Display

Language

Set the language of the display text. When "automatic" is set, the language of your service provider is used. If a language that you do not understand happens to be set, the phone can be reset to the language of your service provider with the following input (in standby mode):

*#0000# ~>

T9 Input

Additional information

Individual ring tones can be sent to you via SMS (p. 47) or you can download them via WAP (p. 68). See also My phone (p. 25).

Call Screening

α<u>8</u>!

Only calls from phone numbers that are in the Phonebook/Addressbook or in a group are signaled audibly or by silent alert. Other calls are merely displayed.

If you do not accept these calls, they are forwarded to your mailbox (if set, p. 79).

+!

Display in standby mode: when call screening is activated

Key Tones

You can set the type of acoustic key tone:

Click or Tone or Still

Minute Beep

During a call, you will hear a beep after every minute as a reminder of the time elapsed. The recipient does not hear this beep.

Info Tones

Set service and alarm tones:

On/Off Activate/deactivate tones.

Extended If switched on, a wider range of service tones is available, e.g.:

- · End of menu.
- Network connection broken.

Keys

Any to Answer

Incoming calls can be accepted by pressing any key.

(except (1)).

Auto Key Lock

If activated, the keypad is locked automatically if no key has been pressed for one minute in standby mode. This prevents the phone from being used accidentally. However, you can still be called and you can still make an emergency call.

ProSlide Lock

Enable/disable automatic keylock when closing keypad. The keys are always unlocked automatically when opening the keypad.

Additional information

The keypad can also be directly locked and unlocked in idle state.

as follows.

Hold down.

Key Tones

You can set the type of acoustic key tone:

Click or Tone or Silent

Phone Setup

Call Waiting

⊗!

If you are registered for this service, you can check whether it is set and you can activate/deactivate it (see also p. 29).

Hide ID S!

When you make a call, your phone number can be displayed on the recipient's display (depending on the service provider).

To suppress this display, you can enable the "Hide ID" mode for all subsequent calls or just for the next call. You may need to register separately with your service provider for these functions.

Call Forward

You can set the conditions under which calls are forwarded to your mailbox or other numbers.

Set up call forward (example):

The most common condition for call forward is:

Unanswered

Select Unanswered (includes the Not reachable, No reply, Busy conditions, see below).

Select Press.

Set Select.

Enter the phone number to which the caller will be forwarded (if not already done)

Or ∭→

Select this phone number from the Addressbook/

Phonebook or via Mailbox.

OK

Confirm. After a short pause, the setting is confirmed by the network.

All calls

8!

All calls are forwarded.

Icon in top line of display in standby mode.

Not reachable

Forward occurs if phone is switched off or is out of range.

No reply

A call is only forwarded after a delay that is determined by the network. The period can be set to a maximum of 30 seconds in 5 second intervals

Busv

Forward occurs if a call is in progress. If Call Waiting is activated (p. 79), you will hear the call waiting tone during a call

Receiving Fax

Fax calls are forwarded to a number with a fax connection.

Receiving Data

cΩ1 Data calls are forwarded to a phone number with a PC connection

Status Check

You can check the current forward status for all conditions

After a short pause, the current situation is transmitted by the network and displayed.

Condition set.

Not set.

Display if status is unknown (e.g. with a new SIM card).

Clear All

α<u>8</u>!

All set diversions are cleared

Additional information

Note that the forward is stored in the network and not in the phone (for example when the SIM card is changed).

Check condition or delete it

Delete Select

Reactivate forward

The last forward has been stored. Proceed as with "Set forward". The stored phone number is displayed. Confirm phone number.

Edit phone number

Proceed as with "Set forward". When the stored number is displayed:

Delete

Press. The phone number is deleted

Enter new number and confirm.

Fact. Settings

The phone is reset to the default values (factory setting) (does not apply to SIM card or network settings).

Alternative input in standby mode: ##9999#

Defrag FileSys

(Phone code protected)

Format

The file system memory is formatted and **all** data that has been saved is deleted, including Addressbook, ring tones, organizer entries, etc. Save important data in advance (p. 123).

Clean Up

The file system is defragmented.

Phone Identity

The phone identity number (IMEI) is displayed. This information may be useful for customer service.

Alternative input in standby mode: ***#06#**

Check software version p. 120.

Auto Off

The phone switches off each day at the set time.

Activate:

Time Press.

Enter time (24-hour clock).

OK

Confirm.

Deactivate:

Manual

Press.

OK

Confirm.

Clock

Time/Date

The clock must be set to the right time once at start-up.

Press.

First enter the date (day/ month/year), then the time (12 hours, including seconds).

Additional information

If the battery is removed for longer than approx. 30 seconds, the clock must be reset

Setting date format:

DD: Day (2-digit)
MM: Month (2-digit)
YYYY: Year (4-digit)

Time Zones

Set the time zone for your area.

Select the required time zone from list ...

... press to set.

Options O	pen menu.
Set	Set time zone.
Rename	Assign a new name to time zone.
DST	Activate/deactivate daylight saving. When daylight saving is activated a sun icon appears on the display.
Auto Time- zone ⊗ I	The time zone is switched automatically to local time by the network.
View	Display the selected time zone with name and date.

Date Format

DD.MM.YYYY or MM/DD/YYYY

Time Format

Format 24h or Format 12h.

Show Clock

Activate/deactivate time display in standby mode.

Connectivity

GPRS

8

(General Packet Radio Service)

GPRS is a new method for transmitting data faster in the cell phone network. Use GPRS and if the network has sufficient capacity, you can be connected to the Internet permanently. Only the actual transmission time is charged by the network operator.

Some service providers do not yet support this service.

Yes / No Activate or deactivate GPRS function.

Shown in display:

GPRS

Activated and available.

!GPRS!

Logged on.

GPRS

Connection briefly lost.

Data Counter

Display of information on connection status.

IrDA

Your phone has an infrared interface. You can use this to exchange data (Addressbook entries, business card, SMS, organizer entries) with other devices that are also equipped with an infrared interface.

The infrared interface is on the right side of the phone. The distance between the two devices must not exceed 30 cm. The infrared windows of the two devices should be placed as close to one another as possible.

Change

Activate/deactivate IrDA.

Shown on the display:

D:--

When activated.

During the transfer.

Data Services

For the MMS, WAP and Mail, Java, Rms applications at least one connection profile must be set up and activated.

(⊕) Se

Open menu.

Change Sett.

Options

Select, then:

For CSD (Circuit Switched Data)

CSD settings

Edit

Save

Select.

Press.

If it has not been pre-installed, enter the data or enter the required settings (your service provider will supply you with information on this):

Dial-up number	Enter ISP number.
Call type:	Select ISDN or analog.
Login name:	Enter login name.
Password:	Enter password (shown as a series of asterisks).
DNS1 / DNS 2:	(optional).

Save settings.

For GPRS

(General Packet Radio Service)

GPRS settings

Select.

You can activate GPRS for the profile and change the settings here. You can only start to use GPRS once you have activated GPRS on your phone (p. 83).

APN: Enter service provider address.

Login name: Enter login name.

Password: Enter password (shown as a series of asterisks).

DNS1 / DNS 2: (optional).

Save

Save settings.

HTTP Profile

Preparation of the phone depends on current service provider:

- The settings have already been installed by your provider. You can start immediately.
- Access profiles have already been set by your provider. Then select and activate profile.
- The access profiles must be set manually.
 If necessary, check with your service provider for details.

Fax/Data Mod.

Fax/data mode using a PC

With the phone and a connected PC, you can transmit and receive faxes and data. Appropriate software for fax and data communication must be available on your PC and there must be a connection to the phone.

Fax and data services must be enabled by the service provider. There are variations in fax and data reception, depending on the network. Please ask your service provider about this.

Change Set the required mode.

Rec Fax/Data

\ | |

Your service provider has given you a number for telephoning and a fax/data number.

The call is signaled by a special ring tone and the type of call (fax or data) is displayed.

Now start the communication program in your PC to receive the faxl data.

Send Voice/Fx

⊗!

Set this function on the phone **before** transmission so that you can switch from voice mode to fax mode.

While the connection is being set up, the following function is available for two seconds:

Voice/fx

Switch to Send Voice/Fx mode; you may now send a fax.

Voice/Fax Rec

(**Only** if no special fax or data number is available).

Start the required communication program on your PC and select the function on the phone **during** the call (the PC will take over the connection).

End transmission

End transmission with PC software and/or press 0.

Authentication

Activate encrypted WAP dial-up (CHAP Challenge Authentication Procedure) or deactivate it (PAP Personal Authentication Procedure).

Security

The phone and SIM card are protected against misuse by several security codes.

Codes

PIN Control, Change PIN, Change PIN2, Chg.Phonecode (p. 24).

⊗!

(PIN 2 protected)

Dialing options are restricted to SIMprotected phone numbers in the Phonebook. If only area codes are entered, relevant phone numbers can be added to these manually before dialing.

If the SIM card does not support PIN 2 input, the **whole** Phonebook can be protected with the phone code.

This SIM Only

8

(Phone code protected)

By entering a phone code, the phone can be linked to a SIM card. Operation using a **different** SIM card is not possible without knowing the phone code.

If the phone is to be used with a different SIM card, enter the phone code when requested.

Barrings

⊗!

Barring restricts the use of your SIM card (this is not supported by all service providers). You need a 4-digit password which your service provider will give you. You may need to register each barring separately with your service provider.

All outgoing

All outgoing calls except emergency number 911 are barred.

Outgo internat

Only national calls can be made.

Out.int.x home

International calls are not permitted. However, you can make calls to your home country when abroad.

All incoming

The phone is barred for all incoming calls (forwarding of all calls to mailbox provides a similar effect).

When roaming

You do not receive calls when you are outside your home network. This means that no charges are incurred for incoming calls.

Status Check

The following information can be displayed after a status check:

Barring set.

Barring not set.

Status unknown (e.g. new SIM card).

Clear All

All barrings are deleted. A password which the service provider will give you is needed for this function.

Network

Line

⊗!

This function is only displayed if it is supported by the service provider. **Two separate** phone numbers must be registered on the phone.

Select

Select phone number in current use.

Display current phone number.

Additional information

Settings for phone numbersp. 120

Block line

(Phone code protected)

You may limit usage to one phone number.

Network Info

The list of GSM networks currently available is displayed.

Indicates forbidden service providers (depending on SIM card).

Choose Network

cΩ1

Network search is restarted. This is useful if you are not on your home network or want to register on a different network. The network list is rebuilt when Auto Network is set.

Auto Network

8

Activate/deactivate, see also Choose Network above. If "Automatic network" is activated, the next network on the list is dialed in ranking order of your "preferred networks". Alternatively select a different network manually from the list of the available GSM networks

Pref. Network

Enter your preferred service providers here for when you leave your home network (e.g. if there are differences in price).

Additional information

If the signal strength of the preferred network is inadequate when you switch on the phone, the phone may register in a different network. This can change when the telephone is next switched on or if another network is selected manually.

Your service provider is displayed:

List

Display list of preferred networks.

Create new entry:

 Select empty line, press Entry, then select another entry from the list of service providers and confirm.

Change/delete entry:

· Select entry, press Change, then select another entry from the list of service providers and confirm or press Clear.

Band selection

cΩII

Select either GSM 900, GSM 1800 or GSM 1900.

Fast Search

When this function is active, network reconnection is speeded up (and standby time is reduced).

User Group

⊗!

Depending on service provider, you can create groups with this service. These can have access to internal (company) information, for example, or special tariffs apply. The details can be clarified with your service provider.

Active

Activate/deactivate function. "User group" must be deactivated for normal phone use (phone code, p. 23).

Select Group

You can select or add groups other than preferred groups (see below). Code numbers for the groups are obtained from your service provider.

Outgo. Access

In addition to network control for a user group, it is possible to set whether outgoing calls outside the group are permitted. If the function is deactivated, only calls within the group are permitted.

Preferred Grp

If activated, only calls within this standard user group can be made (depending on the network configuration).

Accessories

Car Kit

Only in combination with an original Siemens handsfree Car Kit (p. 131). The profile is activated automatically as soon as the phone is inserted into the cradle.

User-definable settings

Auto Answer

(factory default: off)

Calls are accepted automatically after a few seconds. Eavesdropping is possible!

Message in display.

Auto Off

(factory default: 2 hours)

The phone is powered by the car's power supply. You can adjust the time between switching off the ignition and the automatic switching off of the phone.

Car Loudspk.

Choose a different audio setting if desired for your Car Kit.

Automatic settings:

- · Permanent illumination: switched on.
- · Key lock: switched off.
- Charging the phone battery.
- Automatic activation of the Car Kit profile when phone is inserted in cradle.

Headset

Only in conjunction with an original Siemens headset (p. 130). The profile is automatically activated when headset is plugged in.

User-definable settings

Auto Answer

(factory default: off)

Calls are accepted automatically after a few seconds (except where the ringer is switched off or set to beep). You should therefore be wearing the headset.

Eavesdropping is possible!

Automatic setting

Accept call with Call key or PTT key (Push To Talk), even when key lock is activated.

Auto answer

If you do not notice that your phone has accepted a call, there is the danger that the caller may eavesdrop.

ProSlide

Volume

Adjust the volume of the music when opening and closing the keypad.

Open. Melody

Set the music to be played when the keypad is opened.

Closing Melody

Set the music to be played when the keypad is opened.

ProSlide Lock

Enable/disable automatic keylock when closing keypad. The keys are always unlocked automatically when opening the keypad.

Several settings can be stored in a phone profile in order, for example, to adapt the phone to the surrounding level of noise.

 Five standard profiles are provided with default settings. They can however be changed:

Normal Env.

Quiet Env.

Noisy Env.

Car Kit

Headset

- You can set two personal profiles (<No Title>).
- The special profile Aircraft Mode is fixed and cannot be changed, (p. 92).

Activate

Select default profile or personal profile.

Activate

Activate profile.

Camera (Accessories)

You can use the phone to immediately view, save and send photos you have taken with the Mobile Camera IQP-511 (p. 130).

Shots can be taken in two different formats:

- Low resolution: QQVGA 160x120 pixels, memory size up to 6 KB to send as a picture message (p. 53).
- High resolution: VGA 640x480 pixels, memory size of one shot up to 40 KB - e.g. for further editing on PC. To allow the picture to be viewed on the phone display, a QQVGA picture is created for every VGA shot.

Camera

Press when the camera has been attached (in standby mode).

Or

Menu → 🗇 → Camera

First the number of shots still available is shown (depends on resolution chosen).

OK Confirm.

The last shot taken is shown.

Scroll through photos.

Shot

A shot (especially in high resolution) requires a few seconds to be processed.

Press the plus/minus side key at the top. You will hear an advisory tone when the exposure time has expired. The photo is shown on the display and saved automatically.

Flash

The flash function can be activated/ deactivated in the option menu.

If the flash is switched on from "Options", the flash is charged before taking a picture:

Press the **plus/minus side key at the top briefly**. The flash is loaded.

Press the **plus/minus side key at the top again**. The photo is taken with the flash.

Additional information

Photograph without flash when the function Use Flash is switched on:

Hold down the plus/minus side key at the top. The charging process for the flashlight is omitted and a shot is taken immediately.

SIM services (optional)

Your service provider may offer special applications such as mobile banking, stock prices, etc. via the SIM card.

If you have such a SIM card, the SIM services will appear in the main menu under "Extras" or directly above the control key (on the left).

Symbol for SIM services.

Where there are several applications, these are displayed in a SIM services menu.

Menu → 💬 → SIM services

With the SIM services menu, your phone is ready to support future additions in your service provider's user package. For further information, please contact your service provider.

110 Fast access key

The left soft key and the number keys 2 to 9 (speed dialing numbers) can each be assigned an important phone number or a function. The phone number can then be dialed or the function started at the touch of a button.

Additional information

The left soft key may already have a function allocated by your service provider (e.g. access to PSIM card services). It may not be possible to modify this soft key assignment.

The left soft key may also sometimes be replaced automatically by /oo to access a new message.

Key assignments available:

Internet (WAP)	p. 68
Phone number	p. 39
Alarm Clock	p. 103
New SMS	p. 47
Illumination	p. 75
Hide ID	p. 79
Missed Calls	p. 44

<empty></empty>	

Left soft key

Assign a function/phone number to the left soft key for fast access.

Edit

Internet

Press briefly.

Change

Scroll to application in the list.

 Assign a new application (e.g. New SMS) to the soft key. Fast access key

Select Confirm setting.

Apply

The setting "Carol" is used here only as an example.

· Special case Phone Number. Pick out a

Addressbook to assign to the soft key.

name (e.g. "Carol") from the Phonebook/

Carol

Hold down.

Speed dialing keys

Number keys 2 to 9 can be used as speed dialing numbers for fast access. For available key assignments see p. 110. Number key 1 is reserved for the mailbox number (p. 45).

Edit

In standby mode:

Press a number key (2–9). If the key is not yet assigned:

Press.

Set Or

New SMS

Press **briefly** (if **New SMS** is assigned for example).

Edit

Scroll to application in the list.

Special case Phone Number. Pick out a name from the Phonebook/ Addressbook for assignment to the key. Special case Bookmarks. Scroll to a URL in the bookmark list for assignment to the key.

111

Select

Confirm setting.

Apply

Select a stored phone number or start a stored application (e.g. New SMS).

In standby mode:

Press briefly.

The assignment of the number key 3 is displayed above the right soft key e.g.:

New SMS Hold down.

Or simply

Hold **down**.

Siemens AG 2001, I:\Mobil\L55\SL56\long\von_[it]\SL55_FastDial.fm

File Manager

To organize your files, you can use the file system like a PC file manager. The file system assigns special folders to different data types.

In order to protect content from being copied, two types of folders have been created: 1) Unprotected folders titled MyData and its subfolders and 2) Protected folders.

Data stored in the MyData folders can be sent out of the phone using MMS or email

Data that is received using WAP will be automatically stored in a protected folder based on the type of content, sound, graphic, etc.

A list of the folders and files is displayed.

Navigate through this list using the control key:

Scroll up and down.

Go back from folder.

Open folder or execute file with related application

or

Mark

with unknown file types: Highlight file.

Index structure

The file system assigns special folders to different data types.

cis to un	iereni data types.

Sort	Set sort criteria (alphabetical, type, time).
Attributes	Display information on file or folder selected.
Drive Info	Display the capacity used and available.

Print via.../Send via....

The phone provides you with several methods for sending, receiving or printing texts and data via different transmission routes. Access to these functions is available in the option menu of the relevant application. These menu items can vary depending on the application. Please make sure you use the ANSI character set for transmission purposes. Your printer has to be set to the correct conversion table (code page) in order to display special characters correctly.

IrDA (Infrared)

Activate IrDA, p. 83.

Application option:

Send/Print → Via IrDA

Send The data is sent via the selected transmission

route

Print The data is sent to the connected printer.

All via IrDA

Application option:

Send/Print... → All via IrDA

All entries from the Phonebook. Addressbook and organizer are sent or printed via the infrared port.

Send See above.

Print

See above.

Set import mode on receiving phone.

To receive via IrDA

Please turn on IrDA to receive (p. 83).

Via SMS/vCard

Phonebook and Addressbook entries as well as appointments can be sent as an SMS to other suitable cell phones.

With larger items, several SMS messages may be generated and sent as a concatenated message.

Via SMS/Text

Business cards, Addressbook entries or appointments can be sent as text messages by SMS (this may result in several being generated).

Import

Fnable transmission to receive several objects in succession via IrDA.

Data objects

Files received via IrDA or SMS are stored in the file system (p. 112).

Control codes (DTMF)

Sending control codes

You can enter control codes (digits) during a call so that an answering machine can be controlled remotely. These digits are directly transmitted as DTMF tones (control codes).

menu

Open call menu.

Send DTMF

Select.

Use the Phonebook

Save phone numbers **and** control codes (DTMF tones) in the Phone/ Addressbook like a normal entry.

Enter phone number.

Press until a "+" appears on the display (pause for connection setup).

Enter DTMF signals (digits).

If necessary enter further pauses of three seconds each to ensure correct processing at destination.

Enter a name.

Press.

You can also store just the DTMF tones (digits) without a phone number and send these during a call.

Copy protection

Applications can be copy-protected. Applications protected in this way can only be executed on specially designated devices. It is possible, however, to create a backup copy of these applications on the PC at any time using the "Siemens Data Suite" (p. 123).

Dial-up access CSD

(Circuit Switched Data)

Data transfer is made via a data connection to a default IP address of your network provider or service provider. This connection can be used for the exchange of data (e.g. for access to the Internet or for downloading games and applications as well as for using WAP services).

As long as this connection is established for using services or downloading applications from the Internet, charges for the connection accrue according to the price list of your network provider or service provider.

Notes A-Z

Dial-up access GPRS

⊗!

(General Packet Radio Service)

GPRS is a new method for transmitting data faster in the cell phone network. If you use GPRS and the network has sufficient capacity, you can be connected to the Internet permanently.

Some service providers do not yet support this service.

EMS

(Enhanced Messaging Service)

Besides formatted texts, you can also send

- pictures (bitmaps) up to max.
 32 x 32 pixels (black and white),
- · sounds,
- animations (sequence of 4 pictures) 8 x 8 and 16 x 16 pixels (black and white), using the EMS.

The elements listed above can be transmitted individually or together in an SMS.

With EMS, pictures and sounds can also be sent (e.g. as screensavers and ring tones).

This can result in messages exceeding the length of a single SMS. In this case individual text messages are concatenated to form a single message.

Extending numbers in the Phonebook/Addressbook

When entering a phone number in the Phonebook/Addressbook, digits can be replaced by a question mark "?":

Hold down.

This placeholder must be filled before dialing (e.g. with the extension number in a telephone system).

Select the phone number to call from the Phonebook/Addressbook:

Press.

? to be replaced by digits.

Press, number is dialed.

Highlighting mode

With some applications (e.g. Addressbook) one or more entries in a list can be highlighted, to carry out a function jointly.

Options Mark Open menu.

Activate highlighting mode.

If an **unmarked** entry is selected, this can be highlighted:

Mark

The current entry is highlighted.

If a **highlighted** entry is selected, the highlighting can be deleted:

Unmark Unmark the current entry.
Highlighting function in options
menu:

Options Open menu.

Mark All Highlight all entries.

Unmark All Delete highlighting on all marked entries.

HTTP

(Hypertext Transfer Protocol)

HTTP is the name given to the protocol that governs data transmission in the Internet. Using HTTP connections you can download applications and games (Games & More, p. 71) as well as polyphonic ring tones from the Internet. Configure an HTTP link using the HTTP profile (p. 73).

International dialing codes

Many international dialing codes are stored in your phone. In standby mode (□ +) not necessary when dialing from the Phonebook):

0 +

Hold down until a "+" is displayed. This replaces the first two digits of the international dialing code.

+List

Press.

Select the required country. The international dialing code is displayed. Now add the national number (in many countries without the first digit) and press the Call key.

Notes A-Z

JAD ☆ and JAR ☆

Three file types occur when using lava™:

The JAD file (Java Descriptor)

This file contains information on the application (JAR file) and its address for downloading. By activating a JAD file, the connection to the Internet is established and the executable application is loaded.

The JAR file (Java archive)

This file contains the executable application. By activating a JAR file, the application is started.

Combined files

These files result from JAR files being loaded via JAD files. In this case the JAD file is inserted into the JAR file. The display icon is the same as for JAR files.

The following icons appear when using Java™:

JAD file

JAR file

Java™

Java™ allows you to use numerous games and applications on your cell phone. You can download these applications from the Internet and install them on your cell phone. The application can be started after installation. Please refer to the operating instructions for each application.

Siemens does not guarantee in the case of Java applications, however, that the downloaded and installed Java application will also work well with your cell phone (p. 73).

Message memory full

The SIM memory is full when the message icon flashes. **No** more SMS messages can be received. Delete or save messages (p. 51).

Outside your own home network

If you are outside your "home" network, your phone will automatically connect to a different GSM network (p. 88).

Own numbers

You can enter your "own numbers" in the Phonebook (e.g. fax) for information. These numbers can be changed or deleted and also sent as an SMS.

Notes A-Z

Performance

A full battery will deliver between 60 to 175 hours of standby time or 100 to 180 minutes of talktime.

The length of performance depends on the operating conditions:

Operation carried out	Time (min)	Decrease in the standby time by
Calling	1	30 - 60 minutes
Display back light *	1	30 minutes
Network search	1	5 -10 minutes

^{*} key input, games, organizer etc.

Extreme temperatures reduce the standby time of the phone considerably. Avoid exposing the phone to direct sunlight or placing it on a radiator.

Phone number/URL in SMS

Phone numbers highlighted in the text can be dialed or stored in the Phonebook/Addressbook. URLs (Internet addresses) can be called up directly and the HTTP download started. To do this the HTTP profile (p. 73), or the WAP profile (p. 70) must be installed and activated.

Press to dial the phone number/download.

Phone number memo

You can type in a phone number on the keypad during a phone call. The person you are talking to will hear this. The number can be stored or dialed after the current call has ended

Quick menu selection

All menu functions are numbered internally. By entering these numbers one after the other, the function may be started at once.

e.g. write a new text message:

Menu

Press.

5 jkl

for Messages

1 🕳

for New SMS

Service numbers

There may be numbers saved in the Phonebook (<Special Books>, <Service Numb.>, p. 36) that were put there by your service provider. You can call local or nationwide information services or use services of the service provider.

Set Forward

Forward

Forwards the caller to the mailbox, for example, if the Busy diversion is set and the function Call Waiting is activated (see also p. 79).

Siemens AG 2001, I:\Mobil\L55\SL56\long\von_[itl]\SL55_A-Z.fm

Notes A-Z

SIM card problems

You have inserted your SIM card. Despite this, the following message appears:

Please insert your SIM card

Please check that the card is **correctly** inserted and the contacts are clean; if necessary, clean them with a dry cloth. If the card is damaged, please contact your service provider.

See also "Questions & Answers" p. 124.

SMS Push

This function allows you to call up an Internet address (URL) straight from a text message. After selecting it, the URL is highlighted. By pressing the Call key, the WAP browser is automatically started and the highlighted Internet address is called up.

SMS status report

If the phone was unable to send the message to the service center, a retry option is available. If this attempt also fails, contact your service provider.

The confirmation Message sent! only indicates transmission to the service center, which then tries to deliver the message within a certain time-frame.

See also "validity period", p. 63.

Software version

To display the software version of your phone in standby mode enter:

*#06#, then press Info.

Switch ring tones on/off

Hold down.

In standby mode

All sounds (including the ring tone) can be switched off and then on again. The function will end when the cell phone is switched off.

During a call:

Switch off the ring tone only for the **current** call/alarm (not if Any to Answer, p. 78, is active). Accepting or refusing the call ends this function.

- · The call will still be displayed.
- The silent alert remains active if it has been switched on previously.
- The sound settings will remain unchanged.

Two phone numbers

Special settings can be given to each phone number (e.g. ring tone, call forward, etc.). Switch to the required number first.

To switch the phone number/line in standby mode:

Press.

Line 1

Press.

WAP

(Wireless Application Protocol)

WAP is a technical standard that provides the basis for connecting mobile radio networks with the Internet. WAP allows you to surf the Internet using a cell phone, download games and applications and to use WAP services such as news, stock market data and information services

Special characters for WAP usage

Press repeatedly for:

The bookmark selected is dialed.

Without SIM card

If you switch on the phone without a SIM card, you can use some of the phone functions.

Press soft key. The functions are displayed.

Emergency, SOS.

The phone is supported by Xtnd Connect Synchronization SW and a modem assistant SW to use your phone as a GPRS modem. This software can also be found on the Siemens Web site.

Synctool (XTNDConnect[®] PC)

With this module you can synchronize the Organizer databases on your phone with your PC. The software synchronizes your phone automatically with Outlook® or Lotus Notes™.

A detailed list of the PIM versions supported can be found in the online help for the Siemens Data Suite.

GPRS Modem Assistant

The GPRS Modem Assistant enables GPRS links to be created from a laptop, which gives you Internet access with a laptop and cell phone while on the road.

124

Questions & Answers

If you have any questions about using your phone, visit us at www.my-siemens.com/customercare anytime. As further help we have listed below some frequently asked questions and answers.

Problem	Possible causes	Possible solution
Phone cannot be switched on.	On/Off key not pressed long enough.	Press On/Off key for at least two seconds.
	Flat battery.	Charge battery. Check charging indicator in display.
	Battery contacts dirty.	Clean contacts.
	See also below under "Charging error"	
Standby time too short.	Frequent use of organizer and games.	Restrict use if necessary.
	Speed search activated.	Deactivate speed search.(p. 88).
	Display illumination on.	Switch off display illumination (p. 75).
	Unintentional keystrokes (illumination!).	Activate key lock (p. 78).
Charging error (charge icon not displayed).	Battery totally discharged.	Plug in charger cable, battery is on charge. Charge icon appears after approx. 2 hours. Charge battery.
	Temp. out of range 41 F to 104 F.	Make sure the ambient temperature is right, wait for a while, then recharge.
	Contact problem.	Check power supply and connection to the phone. Check battery contacts and device interface, clean them if necessary, then insert battery again.
	No mains voltage.	Use different mains power socket, check mains voltage.
	Wrong charger.	Use original Siemens accessories only.
	Battery faulty.	Replace battery.
SIM error	SIM card not inserted correctly.	Check that the SIM card is inserted correctly (p. 17).
	Dirty SIM card contacts.	Clean SIM card with a dry cloth.
	SIM card with wrong voltage.	Use 3V SIM cards only.
	SIM card damaged (e.g. broken).	Carry out a visual check. Change SIM card at service provider.

Questions & Answers

Problem	Possible causes	Possible solution
No network	Weak signal.	Move higher, to a window or an open space.
connection.	Outside GSM range.	Check service provider's coverage area.
	Invalid SIM card.	Complain to the service provider.
	New network not authorized.	Try manual selection or select a different network (p. 88).
	Network barred.	Check network barrings (p. 86).
	Network overloaded.	Try again later.
Phone loses network.	Signal too weak.	Reconnection to another service provider is automatic (p. 88). Switching phone off and on again can speed this up.
Calls not possible.	Second line set.	Set first line (p. 87).
	New SIM card inserted.	Check for new barrings.
	Charge limit reached.	Reset limit with PIN 2 (p. 46).
	Credit used up.	Load credit.
Certain uses of phone not possible.	Call restrictions are in place	Barrings can be set by service provider. Check barrings (p. 86).
No entries in Addressbook possible.	Phonebook is full.	Delete entries in Phonebook or transfer to Address-book (p. 36).
Voice mail not functioning	Call forward to mailbox not set.	Set call forward to mailbox (p. 79).
SMS (text message)	SMS memory is full.	To free up capacity, delete (p. 51) or file (p. 51) text messages (SMS).
Function cannot be set.	Not supported by service provider or registration required.	Contact your service provider.
Capacity problems with, for example, Games & More, ring tones, pictures, SMS archive.	Handset memory full.	Delete files in the relevant areas.
No WAP access, downloading not possible.	Profile not activated, profile settings wrong/incomplete.	Activate (p. 70), set (p. 70) WAP profile or HTTP profile (p. 73). If necessary ask your service provider.

126

Questions & Answers

Problem	Possible causes	Possible solution	
Text message cannot be sent.	Service provider does not support this service.	Contact your service provider.	
	Phone number for service center not set or incorrect.	Set service center (p. 63).	
	SIM card contract does not support this service.	Contact your service provider.	
	Service center overstrained.	Repeat message.	
	Recipient does not have a compatible phone.	Check.	
EMS pictures and sounds not displayed at destination phone.	Destination phone does not support the EMS standard.		
No Internet access possible.	Incorrect WAP profile set, or wrong or incomplete settings.	Check settings or ask contact service provider.	
PIN error/ PIN2 error.	Three wrong entries.	Enter the PUK (MASTER PIN) supplied with the SIM card according to the instructions. If the PUK (MASTER PIN) has been lost, please contact your service provider.	
Phone code error.	Three wrong entries.	Contact Siemens Service (p. 127).	
Service provider- code error.	No authorization for this service.	Contact your service provider.	
Too few/too many menu entries.	Functions may have been added or deleted by the service provider via the SIM card.	Check with your service provider.	
No fax possible.	Wrong settings in the PC.	Check settings (p. 85).	
	No authorization for this service.	Contact your service provider.	
Charge meter does not work.	Charge pulse is not transmitted.	Contact your service provider.	
Damage			
Severe shock.	Remove battery and SIM and re-inser	rt them. Do not dismantle the phone!	
Phone became wet.	ret. Remove battery and SIM. Dry immediately with a cloth, but do not apply heat. Dry connector contacts thoroughly. Stand cell phone upright in an air current. Do not dismantle the phone!		

Reset all settings to factory default (see also p. 81): * # 9 9 9 9 #

Specifications

Exposure to radiofrequency signals

Your wireless handheld portable telephone is a low power radio transmitter and receiver. When it is ON, it receives and also sends out radiofrequency (RF) signals.

In August 1996, The Federal Communications Commission (FCC) adopted RF exposure guidelines with safety levels for hand-held wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies:

- American National Standards Institute (ANSI) C95.1 (1992)
- National Council of Radiation Protection and Measurement (NCRP) Report 86 (1986)
- International Commission of Non-Ionizing Radiation Protection (ICNIRP) 1996
- · Ministry of Health (Canada) Safety Code 6

Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature. For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI standard (C95.1).

The design of your phone complies with the FCC guidelines (and those standards). For additional information concerning exposure to radio

frequency signal, see the statement by the FDA at the end of this user quide.

Care and maintenance

Your phone has been designed and crafted with great care and attention and should also be treated with care. The suggestions below will help you to enjoy your phone for many years.

- Protect your phone from moisture and humidity! Precipitation, humidity and liquids contain minerals that will corrode electronic circuits. Nevertheless, should your phone become wet, disconnect it immediately from the power supply and remove the battery!
- Do not use or store the phone in dusty, dirty areas. Its moving parts may become damaged.
- Do not store the phone in hot areas. High temperatures can shorten the life of electronic devices, damage batteries and warp or melt certain plastics.
- Do not store your phone in cold areas.
 When the phone warms up again (to its normal ambient temperature), moisture can form inside the phone, which may damage electronic circuit boards.
- Do not drop, knock or shake your phone.
 Rough handling can damage internal circuit boards!
- Do not use abrasive chemicals, cleaning solvents, or strong detergents to clean the phone!

The suggestions given above apply equally to your phone, battery, charger and all accessories. If any of these parts are not working properly, take them to your nearest qualified service outlet. The personnel there will assist you and, if necessary, repair the device.

You will need the following details if you lose your phone or SIM card. Please enter here
the number of the SIM card (on the card):
the 15-digit serial number of the phone (under the battery):
the Customer Service number of the

Lost phone

Phone ID

If you lose your phone or SIM card contact your service provider immediately to prevent misuse.

Accessories

Basics

Li-Ion Polymer Battery 500 mAh EBA-520

Spare battery.

Travel Charger

Travel Charger ETC-520

Travel charger with an extended input voltage range of 100–240 V.

Headset PTT HHS-510

Headset with PTT key to activate voice recognition and to accept and end calls.

Original Siemens Accessories www.siemens.com/us

Data/Applications

Data Cable DCA-500

For connecting the phone to the serial RS232 port of the PC.

Data Cable USB DCA-510

For connecting the phone to the USB port of the PC. With load function.

SyncStation DSC-500

Table cradle for your cell phone. Allows data exchange and simultaneously charges the phone via the power supply unit. Features a desktop charger, a data cable (serial) and a Y adapter.

Innovations

Mobile Camera IQP-511

Camera that plugs into the cell phone. Allows you to take photos and send them via the cell phone to other cell phones using MMS or via email to a PC. Integrated flashlight that can be switched on or off as required.

Car Solutions

Car Charger ECC-500

Charger for the cigarette lighter socket in the car.

Portable Car Kit HKP-500

Handsfree kit with integrated loudspeaker and microphone and auto answer feature. Simply plug into the cigarette lighter socket. Ideal for easy transfer between vehicles.

Mobile Holder HMH-520

Cradle without antenna port.

Basic Car Pack HKB-500

Allows in-car charging of your cell phone as well as handsfree talking. Contains a Car Charger, a Headset PTT and a Y adapter.

Car Kit Plus HKC-511

Handsfree kit with first-class digital call quality and supreme ease of use. Compatible with SL56 by using Mobile Holder HMH-520.

Products can be purchased through operators or by visiting my-siemens.com/us.

The U.S. Food and Drug Administration's (FDA) Center for Devices and Radiological Health Consumer Update on Mobile Phones

FDA has been receiving inquiries about the safety of mobile phones, including cellular phones and PCS phones. The following summarizes what is know – and what remains unknown – about whether these products can pose a hazard to health, and what can be done to minimize any potential risk. This information may be used to respond to questions.

Why the concern?

Mobile phones emit low levels of radio frequency energy (i.e., radio frequency radiation) in the microwave range while being used. They also emit very low levels of radio frequency energy (RF), considered nonsignificant, when in the stand-by mode. It is well known that high levels of RF can produce biological damage through heating effects (this is how your microwave oven is able to cook food). However, it is not known whether, to what extent, or through what mechanism. lower levels of RF might cause adverse health effects as well. Although some research has

been done to address these questions, no clear picture of the biological effects of this type of radiation has emerged to date. Thus, the available science does not allow us to conclude that mobile phones are absolutely safe, or that they are unsafe. However, the available scientific evidence does not demonstrate adverse health effects associated with the use of mobile phones.

What kinds of phones are in question?

Ouestions have been raised about hand-held mobile phones, the kind that have a built-in antenna that is positioned close to the user's head during normal telephone conversation. These types of mobile phones are of concern because of the short distance between the phone's antenna — the primary source of the RF — and the person's head. The exposure to RF from mobile phones in which the antenna is located at greater distances from the user (on the outside of a car, for example) is drastically lower than that from hand-held phones, because a person's RF exposure decreases rapidly with distance from the source. The safety of so-called "cordless phones," which have a base unit connected to the telephone wiring in a house and which operate at far lower power levels and frequencies, has not been questioned.

How much evidence is there that handheld mobile phones might be harmful?

Briefly, there is not enough evidence to know for sure, either way; however, research efforts are on-going. The existing scientific evidence is conflicting and many of the studies that have been done to date have suffered from flaws in their research methods. Animal experiments investigating the effects of RF exposures characteristic of mobile phones have yielded conflicting results. A few animal studies, however, have suggested that low levels of RF could accelerate the development of cancer in laboratory animals. In one study, mice genetically altered to be predisposed to developing one type of cancer developed more than twice as many such cancers when they were exposed to RF energy compared to controls. There is much uncertainty among scientists about whether results obtained from animal studies apply to the use of mobile phones. First, it is uncertain how to apply the results obtained in rats and mice to humans. Second, many of the studies showed increased tumor development used animals that had already been treated with cancer-causing chemicals, and other studies exposed the animals to the RF virtually continuously – up to 22 hours per day.

For the past five years in the United States, the mobile phone industry has supported research into the

safety of mobile phones. This research has resulted in two findings in particular that merit additional study:

1. In a hospital-based, case-control study, researchers looked for an association between mobile phone use and either glioma (a type of brain cancer) or acoustic neuroma (a benign tumor of the nerve sheath). No statistically significant association was found between mobile phone use and acoustic neuroma. There was also no association between mobile phone use and gliomas when all types of gliomas were considered together. It should be noted that the average length of mobile phone exposure in this study was less than three years.

When 20 types of glioma were considered separately, however, an association was found between mobile phone use and one rare type of glioma, neuroepithelliomatous tumors. It is possible with multiple comparisons of the same sample that this association occurred by chance. Moreover, the risk did not increase with how often the mobile phone was used, or the length of the calls. In fact, the risk actually decreased with cumulative hours of mobile phone use. Most cancer causing agents increase risk with increased exposure. An ongoing study of brain cancers by the

U.S. FDA

National Cancer Institute is expected to bear on the accuracy and repeatability of these results.¹

2. Researchers conducted a large battery of laboratory tests to assess the effects of exposure to mobile phone RF on genetic material. These included tests for several kinds of abnormalities, including mutations, chromosomal aberrations, DNA strand breaks, and structural changes in the genetic material of blood cells called lymphocytes. None of the tests showed any effect of the RF except for the micronucleus assay, which detects structural effects on the genetic material. The cells in this assay showed changes after exposure to simulated cell phone radiation, but only after 24 hours of exposure. It is possible that exposing the test cells to radiation for this long resulted in heating. Since this assay is known to be sensitive to heating, heat alone could have caused the abnormalities to occur. The data already in the literature on the response of the micronucleus assay to RF are conflicting. Thus follow-up research is necessary. 2

FDA is currently working with government, industry, and academic groups to ensure the proper follow-up to these industry-funded research findings. Collaboration with the Cellular Telecommunications Internet Association (CTIA) in particular is expected to lead to FDA providing

research recommendations and scientific oversight of new CTIA-funded research based on such recommendations.

Two other studies of interest have been reported recently in the literature:

- Two groups of 18 people were exposed to simulated mobile phone signals under laboratory conditions while they performed cognitive function tests. There were no changes in the subjects' ability to recall words, numbers, or pictures, or in their spatial memory, but they were able to make choices more quickly in one visual test when they were exposed to simulated mobile phone signals. This was the only change noted among more than 20 variables compared.³
- In a study of 209 brain tumor cases and 425 matched controls, there was no increased risk of brain tumors associated with mobile phone use. When tumors did exist in certain locations, however, they were more likely to be on the side of the head where the mobile phone was used. Because this occurred in only a small number of cases, the increased likelihood was too small to be statistically significant.⁴

In summary, we do not have enough information at this point to assure the public that there are, or are not, any low incident health problems associated with use of mobile phones. FDA continues to work with all parties, including other federal agencies and industry, to assure that research is undertaken to provide

the necessary answers to the outstanding questions about the safety of mobile phones.

What is known about cases of human cancer that have been reported in users of hand-held mobile phones?

Some people who have used mobile phones have been diagnosed with brain cancer. But it is important to understand that this type of cancer also occurs among people who have not used mobile phones. In fact, brain cancer occurs in the U.S. population at a rate of about 6 new cases per 100,000 people each year. At that rate, assuming 80 million users of mobile phones (a number increasing at a rate of about 1 million per month), about 4800 cases of brain cancer would be expected each year among those 80 million people. whether or not they used their phones. Thus it is not possible to tell whether any individual's cancer arose because of the phone, or whether it would have happened anyway. A key question is whether the risk of getting a particular form of cancer is greater among people who use mobile phones than among the rest of the population. One way to answer that question is to compare the usage of mobile phones among people with brain cancer with the use of mobile phones among appropriately matched people without brain cancer. This is called a case-control study. The current case-control study of brain cancers by the National Cancer Institute, as well as the follow-up research to be sponsored by industry, will begin to generate this type of information.

What is FDA's role concerning the safety of mobile phones?

Under the law, FDA does not review the safety of radiation emitting consumer products such as mobile phones before marketing, as it does with new drugs or medical devices. However, the agency has authority to take action if mobile phones are shown to emit radiation at a level that is hazardous to the user. In such a case, FDA could require the manufacturers of mobile phones to notify users of the health hazard and to repair, replace or recall the phones so that the hazard no longer exists.

Although the existing scientific data do not justify FDA regulatory actions at this time, FDA has urged the mobile phone industry to take a number of steps to assure public safety. The agency has recommended that the industry:

- Support needed research into possible biological effects of RF of the type emitted by mobile phones;
- Design mobile phones in a way that minimizes any RF exposure to the user that is not necessary for device function; and

U.S. FDA

· Cooperate in providing mobile phone users with the best possible information on what is known about possible effects of mobile phone use on human health.

At the same time, FDA belongs to an interagency working group of the federal agencies that have responsibility for different aspects of mobile phone safety to ensure a coordinated effort at the federal level. These agencies are:

- National Institute for Occupational Safety and Health
- Environmental Protection Agency
- · Federal Communications Commission
- · Occupational Health and Safety Administration
- · National Telecommunications and Information Administration

The National Institutes of Health also participates in this group.

In the absence of conclusive information about any possible risk, what can concerned individuals do?

If there is a risk from these products — and at this point we do not know that there is — it is probably very small. But if people are concerned about avoiding even potential risks, there are simple steps they can take to do so. For example, time is a key factor in how much exposure a person receives. Those persons who spend long periods of time on their hand-held mobile phones could consider holding lengthy conversations

on conventional phones and reserving the hand-held models for shorter conversations or for situations when other types of phones are not available

People who must conduct extended conversations in their cars every day could switch to a type of mobile phone that places more distance between their bodies and the source of the RF, since the exposure level drops off dramatically with distance. For example, they could switch to:

- · a mobile phone in which the antenna is located outside the vehicle.
- · a hand-held phone with a built-in antenna connected to a different antenna mounted on the outside of the car or built into a separate package, or
- · a headset with a remote antenna to a mobile phone carried at the waist.

Where can I find additional information? For additional information, see the following websites:

Ten Driving Safety Tips

Your Siemens wireless phone gives you the power to communicate by voice – almost anywhere, anytime. But an important responsibility accompanies the benefits of wireless phones, one that every user must uphold.

When driving a car, driving is your first responsibility. When using your wireless phone behind the wheel of a car, practice good common sense and remember the following tips:

Get to know your phone and its features such as speed dial and redial.

Carefully read your instruction manual and learn to take advantage of valuable features most phones offer including, automatic redial and memory dial – most phones can store up to 99 numbers in memory dial. Also, work to memorize the phone keypad so you can use the speed dial function without taking your attention off the road.

When available, use a hands-free device.

A number of hands-free wireless phone accessories are readily available today. Whether you choose an installed mounted device for your phone or a speaker phone accessory, take advantage of these devices if they are available to you.

Position your phone within easy reach.

Make sure you place your wireless phone within easy reach and where you can grab it without removing your eyes from the road. If you get an incoming call at an inconvenient time, let your voicemail answer it for you.

Suspend conversations during hazardous driving conditions or situations.

Let the person you are speaking to know you are driving; if necessary, suspend the call in heavy traffic or hazardous weather conditions. Rain, sleet, snow and ice can be hazardous, but so is heavy traffic. As a driver, your first responsibility is to pay attention to the road.

Do not take notes or look up phone numbers while driving.

If you are reading an address book or business card while driving a car, or writing a "to do" list, then you are not watching where you are going. It's common sense. Don't get caught in a dangerous situation because you are reading or writing and not paying attention to the road or nearby vehicles.

140 Ten Driving Safety Tips

Dial sensibly and assess the traffic.

If possible, place calls when you are not moving or before pulling into traffic. Try to plan your calls before you begin your trip, or attempt to coincide your calls with times you may be stopped at a stop sign, red light or otherwise stationary. But if you need to dial while driving, follow this simple tip — dial only a few numbers, check the road and your mirrors, then continue.

Do not engage in stressful or emotional conversations that may be distracting.

Stressful or emotional conversations and driving do not mix – they are distracting and even dangerous when you are behind the wheel. Make people you are talking with aware you are driving and if necessary, suspend phone conversations that have the potential to forward your attention from the road.

Use your phone to call for help.

Your wireless phone is one of the greatest tools you can own to protect yourself and your family in dangerous situations – with your phone at your side, help is only three numbers away. Dial 9-1-1 in the case of fire, traffic accident, road hazard, or medical emergency. Remember, it is a free call on your wireless phone.

Use your phone to help others in emergencies.

Your wireless phone provides you a perfect opportunity to be a "good Samaritan" in your community. If you see an auto accident, crime in progress or other serious emergencies where lives are in danger, call 9-1-1, as you would want others to do for you.

Call roadside assistance or a special wireless non-emergency assistance number when necessary.

Certain situations you encounter while driving may require attention, but are not urgent enough to merit a call to 9-1-1. But you can still use your wireless phone to lend a hand. If you see a broken-down vehicle posing no serious hazard, a broken traffic signal, a minor traffic accident where no one appears injured, or a vehicle you know to be stolen, call roadside assistance or other special non-emergency wireless numbers.

"The wireless industry reminds you to use your phone safely when driving."

Intellectual Property

Intellectual Property Restrictions

All Intellectual Property, as defined below, which is owned by or otherwise the property of Siemens Information and Communications Mobile, LLC ("Siemens"), its affiliates, partners or suppliers, relating to the Phone, including but not limited to accessories, parts or software relating thereto (the "Phone System"), is proprietary under federal laws, state laws and International treaty provisions. Intellectual Property includes, but is not limited to, inventions (patentable or unpatentable), patents, trade secrets, copyrights, software, computer programs, and related documentation and other works of authorship. You may not infringe or otherwise violate the rights secured by the Intellectual Property. Moreover, you agree that you will not (and will not attempt to) disassemble, decompile, reverse engineer, prepare derivative works from, modify or make any other effort to create source code from the software. No title to ownership in the Intellectual Property is transferred to you through purchase or possession of the Phone or its components. All applicable rights of the Intellectual Property shall remain with Siemens, its affiliates, partners or suppliers.

Siemens will have no liability with respect to any claim of patent infringement which is based upon the combination of the Product or

parts furnished hereunder with software, apparatus or devices not furnished by Siemens, nor will Siemens have any liability for the use of ancilary equipment or software not furnished by Siemens which is attached to or used in connection with the Product, The foregoing states the entire liability of Siemens with respect to infringement of patents by the Product or any parts thereof.

141

Laws in the United States and other countries preserve for Siemens certain exclusive rights for copyrighted Siemens software, such as the exclusive rights to reproduce and distribute copies of such Siemens software. Siemens software may be used only in the Product in which the software was originally embodied when purchased, and such software in such Product may not be replaced, copied, distributed, modified in any way, or used to produce any derivative thereof. No other use including, without limitation, alteration, modification, reproduction, distribution. or reverse engineering of such Siemens software or exercise of rights in such Siemens software is permitted. No license is granted by implication, estoppel or otherwise under Siemens patent rights or copyrights.
