Attention: UL TCB

Reference: FCC ID: 2AC8R-NFC2

Subject: Exemption from routine evaluation for rf exposure.

Dear TCB,

The KDB 447498 D01 V6 exclusion threshold for exempting a device from routine evaluation when the output frequency is 13.56 MHz and the minimum separation distance is 5mm or less is **237 mW**.

This device has a maximum output power of **200mW** (refer to the NFC chipset specification sheet uploaded as part of the operational description exhibits) and is therefore exempt from routine evaluation.

Regards,

Mark Briggs
