

Response to FCC Correspondence 10584

This application is intended for the FBDA (downlink RF to mobile) transmitter. The FBIU (uplink RF to base station) transmitter is not included in this filing.

The FBDA has a single transmitter for the downlink direction and it receives signals from the base station via fiber only.

Please see page 4 of the test report and pages 3-4 of the "User Manual Operating Instructions" document for clarification on FBIU and FBDA.
