RE: AboCom System, Inc.

FCC ID: MQ4WMG2K6

After a review of the submitted information, I have a few comments on the above referenced Application.

**Administrative Issues:**

- 1) FYI....The FCC logo is not necessary on the labeling and should be removed since this device is not a self contained PC peripheral sold to the end user.
- 2) This application asks for a full modular approval. Note that this is not possible to grant a full modular approval with device that require RF exposure evaluation because portable applications must be reviewed on a case by case basis due to SAR. This application will only be granted a Limited Modular Approval restricted to OEM installation in applications where the 20 cm can be maintained (wireless access points, wireless routers, etc.). Please adjust the modular approval letter to request this.
- 3) The modular approval letter appears to mention a built in antenna. This is not true. Please correct.
- 4) The test report mentions the gain of the antenna as 1.8 dBi, while the RF exposure uses 1.8 numeric. Please confirm the correct gain and correct the exhibits as necessary.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
