

# M2M Cellular Gateway

## Chapter 3 Object Definition

### 3.1 Scheduling

Scheduling provides ability of adding/deleting time schedule rules, which can be applied to other functionality.

#### 3.1.1 Scheduling Configuration

Go to **Object Definition > Scheduling > Configuration** tab.

Time Schedule List <span>Add</span> <span>Delete</span>		
ID	Rule Name	Actions

Button description		
Item	Value setting	Description
<b>Add</b>	N/A	Click the <b>Add</b> button to configure time schedule rule
<b>Delete</b>	N/A	Click the <b>Delete</b> button to delete selected rule(s)

When **Add** button is applied, Time Schedule Configuration and Time Period Definition screens will appear.

Time Schedule Configuration	
Item	Setting
▶ Rule Name	<input type="text"/>
▶ Rule Policy	<span>Inactivate ▼</span> the Selected Days and Hours Below.

Time Schedule Configuration		
Item	Value Setting	Description
<b>Rule Name</b>	String: any text	Set rule name
<b>Rule Policy</b>	Default Inactivate	Inactivate/activate the function been applied to in the time period below

## M2M Cellular Gateway

Time Period Definition			
ID	Week Day	Start Time (hh:mm)	End Time (hh:mm)
1	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
2	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
3	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
4	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
5	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
6	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
7	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
8	-- choose one -- ▼	<input type="text"/>	<input type="text"/>

Time Period Definition		
Item	Value Setting	Description
<b>Week Day</b>	Select from menu	Select everyday or one of weekday
<b>Start Time</b>	Time format (hh :mm)	Start time in selected weekday
<b>End Time</b>	Time format (hh :mm)	End time in selected weekday
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to refresh the time schedule list.

## External Server Configuration

Item	Value setting	Description
<b>Sever Name</b>	1. String format can be any text 2. A Must filled setting	Enter a server name. Enter a name that is easy for you to understand.
<b>Server Type</b>	A Must filled setting	Specify the Server Type of the external server, and enter the required settings for the accessing the server.
		<b>Email Server</b> (A Must filled setting) : When <b>Email Server</b> is selected, <b>User Name</b> , and <b>Password</b> are also required. <b>User Name</b> (String format: any text) <b>Password</b> (String format: any text)
		<b>RADIUS Server</b> (A Must filled setting) : When <b>RADIUS Server</b> is selected, the following settings are also required. Primary : <b>Shared Key</b> (String format: any text) Authentication Protocol (By default CHAP is selected) Session Timeout (By default <b>1</b> ) The values must be between 1 and 60. Idle Timeout: (By default 1) The values must be between 1 and 15. Secondary : <b>Shared Key</b> (String format: any text) Authentication Protocol (By default CHAP is selected) Session Timeout (By default <b>1</b> ) The values must be between 1 and 60. Idle Timeout: (By default 1) The values must be between 1 and 15.
		<b>FTP(SFTP) Server</b> (A Must filled setting) : When <b>FTP(SFTP) Server</b> is selected, the following settings are also required. <b>User Name</b> (String format: any text) <b>Password</b> (String format: any text) <b>Protocol</b> (Select <b>FTP</b> or <b>SFTP</b> ) <b>Encryprion</b> (Select <b>Plain</b> , <b>Explicit FTPS</b> or <b>Implicit FTPS</b> ) <b>Transfer mode</b> (Select <b>Passive</b> or <b>Active</b> )
<b>Server IP/FQDN</b>	A Must filled setting	Specify the IP address or FQDN used for the external server.
<b>Server Port</b>	A Must filled setting	Specify the Port used for the external server. If you selected a certain server type, the default server port number will be set. For <b>Email Server</b> 25 will be set by default; For <b>Syslog Server</b> , port 514 will be set by default; For <b>RADIUS Server</b> , port 1812 will be set by default; For <b>FTP(SFTP) Server</b> , port 21 will be set by default; <b>Value Range:</b> 1 ~ 65535.
<b>Account Port</b>	1. A Must filled setting 2. <b>1813 is set by default</b>	Specify the accounting port used if you selected external RADIUS server. <b>Value Range:</b> 1 ~ 65535.

## M2M Cellular Gateway

---

<b>Server</b>	The box is checked by default	Click <b>Enable</b> to activate this External Server.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to refresh the external server list.

## 3.5 Certificate

In cryptography, a public key certificate (also known as a digital certificate or identity certificate) is an electronic document used to prove ownership of a public key. The certificate includes information about the key, information about its owner's identity, and the digital signature of an entity that has verified the certificate's contents are genuine. If the signature is valid, and the person examining the certificate trusts the signer, then they know they can use that key to communicate with its owner<sup>9</sup>.

In a typical public-key infrastructure (PKI) scheme, the signer is a certificate authority (CA), usually a company such as VeriSign which charges customers to issue certificates for them. In a web of trust scheme, the signer is either the key's owner (a self-signed certificate) or other users ("endorsements") whom the person examining the certificate might know and trust. The device also plays as a CA role.

Certificates are an important component of Transport Layer Security (TLS, sometimes called by its older name SSL), where they prevent an attacker from impersonating a secure website or other server. They are also used in other important applications, such as email encryption and code signing. Here, it can be used in IPSec tunneling for user authentication.

### 3.5.1 Configuration (not supported)

Not supported feature for the purchased product, leave it as blank.

---

<sup>9</sup> [http://en.wikipedia.org/wiki/Public\\_key\\_certificate](http://en.wikipedia.org/wiki/Public_key_certificate).

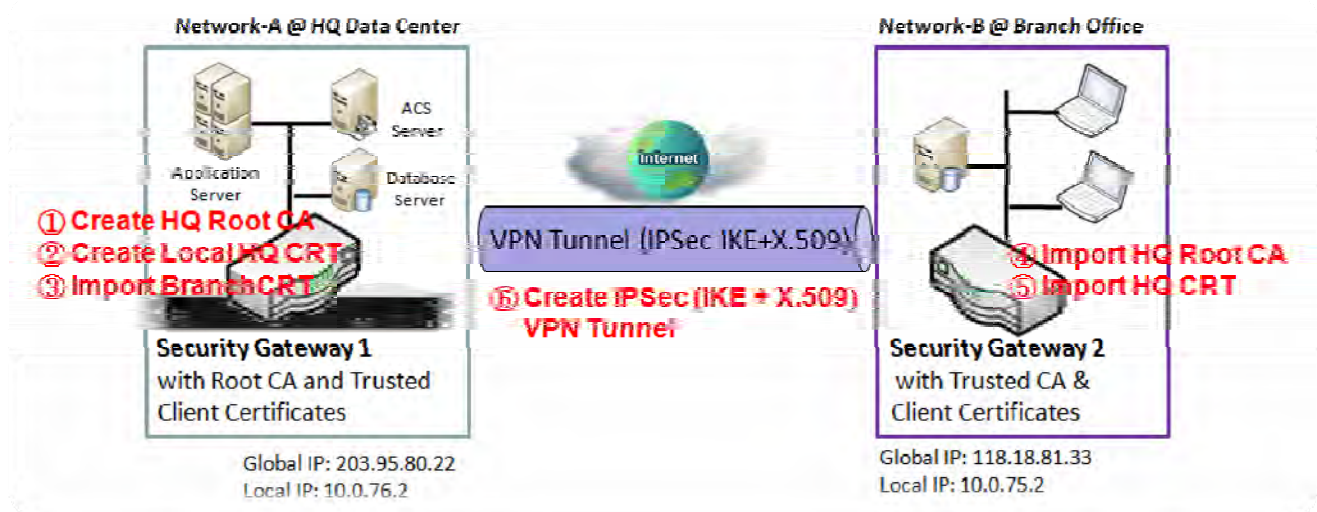

# M2M Cellular Gateway

## 3.5.2 My Certificate

My Certificate includes a Local Certificate List. Local Certificate List shows all generated certificates by the root CA for the gateway. And it also stores the generated Certificate Signing Requests (CSR) which will be signed by other external CAs. The signed certificates can be imported as the local ones of the gateway.

### Self-signed Certificate Usage Scenario

#### Scenario Application Timing

When the enterprise gateway owns the root CA and VPN tunneling function, it can generate its own local certificates by being signed by itself or import any local certificates that are signed by other external CAs. Also import the trusted certificates for other CAs and Clients. In addition, since it has the root CA, it also can sign Certificate Signing Requests (CSR) to form corresponding certificates for others. These certificates can be used for two remote peers to make sure their identity during establishing a VPN tunnel.

#### Scenario Description

Gateway 1 generates the root CA and a local certificate (HQCRT) signed by itself. Import a trusted certificate (BranchCRT) –a BranchCSR certificate of Gateway 2 signed by root CA of Gateway 1.

Gateway 2 creates a CSR (BranchCSR) to let the root CA of the Gateway 1 sign it to be the BranchCRT certificate. Import the certificate into the Gateway 2 as a local certificate. In addition, also import the certificates of the root CA of the Gateway 1 into the Gateway 2 as the trusted ones. (Please also refer to following two sub-sections)

Establish an IPSec VPN tunnel with IKE and X.509 protocols by starting from either peer, so that all

## M2M Cellular Gateway

client hosts in these both subnets can communicate with each other.

### Parameter Setup Example

For Network-A at HQ

Following tables list the parameter configuration as an example for the "My Certificate" function used in the user authentication of IPSec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in following two sections to complete the whole user scenario.

Use default value for those parameters that are not mentioned in the tables.

<b>Configuration Path</b>	[My Certificate]-[Root CA Certificate Configuration]
<b>Name</b>	<b>HQRootCA</b>
<b>Key</b>	Key Type: <b>RSA</b> Key Length: <b>1024-bits</b>

## M2M Cellular Gateway

Remote Netmask	255.255.255.0
Remote Gateway	203.95.80.22

Configuration Path	[IPSec]-[Authentication]
Key Management	IKE+X.509 Local Certificate: <b>BranchCRT</b> Remote Certificate: <b>HQCRT</b>
Local ID	User Name Network-B
Remote ID	User Name Network-A

Configuration Path	[IPSec]-[IKE Phase]
Negotiation Mode	Main Mode
X-Auth	None

### Scenario Operation Procedure

In above diagram, "Gateway 1" is the gateway of Network-A in headquarters and the subnet of its Intranet is 10.0.76.0/24. It has the IP address of 10.0.76.2 for LAN interface and 203.95.80.22 for WAN-1 interface. "Gateway 2" is the gateway of Network-B in branch office and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. They both serve as the NAT security gateways.

Gateway 1 generates the root CA and a local certificate (HQCRT) that is signed by itself. Import the certificates of the root CA and HQCRT into the "Trusted CA Certificate List" and "Trusted Client Certificate List" of Gateway 2.

Gateway 2 generates a Certificate Signing Request (BranchCSR) for its own certificate (BranchCRT) (Please generate one not self-signed certificate in the Gateway 2, and click on the "View" button for that CSR. Just download it). Take the CSR to be signed by the root CA of Gateway 1 and obtain the BranchCRT certificate (you need rename it). Import the certificate into the "Trusted Client Certificate List" of the Gateway 1 and the "Local Certificate List" of Gateway 2.

Gateway 2 can establish an IPSec VPN tunnel with "Site to Site" scenario and IKE and X.509 protocols to Gateway 1.

Finally, the client hosts in two subnets of 10.0.75.0/24 and 10.0.76.0/24 can communicate with each other.

# M2M Cellular Gateway

## My Certificate Setting

Go to **Object Definition > Certificate > My Certificate** tab.

The My Certificate setting allows user to create local certificates. In "My Certificate" page, there are two configuration windows for the "My Certificate" function. The "Local Certificate List" window shows the stored certificates or CSRs for representing the gateway. The "Local Certificate Configuration" window can let you fill required information necessary for corresponding certificate to be generated by itself, or corresponding CSR to be signed by other CAs.

### Create Local Certificate

Local Certificate List <span>Add</span> <span>Import</span> <span>Delete</span>					
ID	Name	Subject	Issuer	Vaild To	Actions

When **Add** button is applied, **Local Certificate Configuration** screen will appear. The required information to be filled for the certificate or CSR includes the name, key and subject name. It is a certificate if the "Self-signed" box is checked; otherwise, it is a CSR.

Local Certificate Configuration	
Item	Setting
▶ Name	<input type="text"/> Self-signed : <input type="checkbox"/>
▶ Key	Key Type : <span>RSA ▼</span> Key Length : <span>1024-bits ▼</span> Digest Algorithm : <span>SHA-1 ▼</span>
▶ Subject Name	Country(C) : <input type="text"/> State(ST) : <input type="text"/> Location(L) : <input type="text"/> Organization(O) : <input type="text"/> Organization Unit(OU) : <input type="text"/> Common Name(CN) : <input type="text"/> Email : <input type="text"/>
▶ Extra Attributes	Challenge Password: <input type="text"/> Unstructured Name: <input type="text"/>
▶ SCEP Enrollment	Enable: <input type="checkbox"/> SCEP Server: <span>--- Option --- ▼</span> <span>Add Object</span> CA Certificate: <span>▼</span> CA Encryption Certificate: <span>--- Option --- ▼</span> (Optional) CA Identifier: <input type="text"/> (Optional)

## M2M Cellular Gateway

Local Certificate Configuration		
Item	Value setting	Description
<b>Name</b>	1. String format can be any text 2. A Must filled setting	Enter a certificate name. It will be a certificate file name If <b>Self-signed</b> is checked, it will be signed by root CA. If <b>Self-signed</b> is not checked, it will generate a certificate signing request (CSR).
<b>Key</b>	A Must filled setting	This field is to specify the key attributes of certificate. <b>Key Type</b> to set public-key cryptosystems. Currently, only RSA is supported. <b>Key Length</b> to set the length in bits of the key used in a cryptographic algorithm. It can be 512/768/1024/1536/2048. <b>Digest Algorithm</b> to set identifier in the signature algorithm identifier of certificates. It can be MD5/SHA-1.
<b>Subject Name</b>	A Must filled setting	This field is to specify the information of certificate. <b>Country(C)</b> is the two-letter ISO code for the country where your organization is located. <b>State(ST)</b> is the state where your organization is located. <b>Location(L)</b> is the location where your organization is located. <b>Organization(O)</b> is the name of your organization. <b>Organization Unit(OU)</b> is the name of your organization unit. <b>Common Name(CN)</b> is the name of your organization. <b>Email</b> is the email of your organization. It has to be email address setting only.
<b>Extra Attributes</b>	A Must filled setting	This field is to specify the extra information for generating a certificate. <b>Challenge Password</b> for the password you can use to request certificate revocation in the future. <b>Unstructured Name</b> for additional information.
<b>SCEP Enrollment</b>	A Must filled setting	This field is to specify the information of SCEP. If user wants to generate a certificate signing request (CSR) and then signed by SCEP server online, user can check the <b>Enable</b> box. Select a <b>SCEP Server</b> to identify the SCEP server for use. The server detailed information could be specified in External Servers. Refer to <b>Object Definition &gt; External Server &gt; External Server</b> . You may click <b>Add Object</b> button to generate. Select a <b>CA Certificate</b> to identify which certificate could be accepted by SCEP server for authentication. It could be generated in Trusted Certificates. Select an optional <b>CA Encryption Certificate</b> , if it is required, to identify which certificate could be accepted by SCEP server for encryption data information. It could be generated in Trusted Certificates. Fill in optional <b>CA Identifier</b> to identify which CA could be used for signing certificates.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration.
<b>Back</b>	N/A	When the <b>Back</b> button is clicked, the screen will return to previous page.

When **Import** button is applied, an Import screen will appear. You can import a certificate from an existed certificate file, or directly paste a PEM encoded string as the certificate.

Apply	N/A	Click the <b>Apply</b> button to import the certificate.
Cancel	N/A	Click the <b>Cancel</b> button to discard the import operation and the screen will return to the My Certificates page.

# M2M Cellular Gateway

## 3.5.3 Trusted Certificate

Trusted Certificate includes Trusted CA Certificate List, Trusted Client Certificate List, and Trusted Client Key List. The Trusted CA Certificate List places the certificates of external trusted CAs. The Trusted Client Certificate List places the others' certificates what you trust. And the Trusted Client Key List places the others' keys what you trusted.

### Self-signed Certificate Usage Scenario

Scenario Application Timing (same as the one described in "My Certificate" section)

When the enterprise gateway owns the root CA and VPN tunneling function, it can generate its own local certificates by being signed by itself. Also imports the trusted certificates for other CAs and Clients. These certificates can be used for two remote peers to make sure their identity during establishing a VPN tunnel.

Scenario Description (same as the one described in "My Certificate" section)

Gateway 1 generates the root CA and a local certificate (HQCRT) signed by itself. Import a trusted certificate (BranchCRT) –a BranchCSR certificate of Gateway 2 signed by root CA of Gateway 1.

Gateway 2 creates a CSR (BranchCSR) to let the root CA of the Gateway 1 sign it to be the BranchCRT certificate. Import the certificate into the Gateway 2 as a local certificate. In addition, also imports the certificates of the root CA of Gateway 1 into the Gateway 2 as the trusted ones. (Please also refer to "My Certificate" and "Issue Certificate" sections).

Establish an IPSec VPN tunnel with IKE and X.509 protocols by starting from either peer, so that all client hosts in these both subnets can communicate with each other.

Parameter Setup Example (same as the one described in "My Certificate" section)

## M2M Cellular Gateway

For Network-A at HQ

Following tables list the parameter configuration as an example for the "Trusted Certificate" function used in the user authentication of IPSec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in "My Certificate" and "Issue Certificate" sections to complete the setup for the whole user scenario.

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate Import from a File]
<b>File</b>	<i>BranchCRT.crt</i>

For Network-B at Branch Office

Following tables list the parameter configuration as an example for the "Trusted Certificate" function used in the user authentication of IPSec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in "My Certificate" and "Issued Certificate" sections to complete the setup for the whole user scenario.

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted CA Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted CA Certificate Import from a File]
<b>File</b>	<i>HQRootCA.crt</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate Import from a File]
<b>File</b>	<i>HQCRT.crt</i>

Scenario Operation Procedure (same as the one described in "My Certificate" section)

In above diagram, the "Gateway 1" is the gateway of Network-A in headquarters and the subnet of its Intranet is 10.0.76.0/24. It has the IP address of 10.0.76.2 for LAN interface and 203.95.80.22 for WAN-1 interface. The "Gateway 2" is the gateway of Network-B in branch office and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. They both serve as the NAT security gateways.

In Gateway 2 import the certificates of the root CA and HQCRT that were generated and signed by Gateway 1 into the "Trusted CA Certificate List" and "Trusted Client Certificate List" of Gateway 2.

## M2M Cellular Gateway

---

Import the obtained BranchCRT certificate (the derived BranchCSR certificate after Gateway 1's root CA signature) into the "Trusted Client Certificate List" of the Gateway 1 and the "Local Certificate List" of the Gateway 2. For more details, refer to the Network-B operation procedure in "My Certificate" section of this manual.

Gateway 2 can establish an IPSec VPN tunnel with "Site to Site" scenario and IKE and X.509 protocols to Gateway 1.

Finally, the client hosts in two subnets of 10.0.75.0/24 and 10.0.76.0/24 can communicate with each other.

# M2M Cellular Gateway

## Trusted Certificate Setting

Go to **Object Definition > Certificate > Trusted Certificate** tab.

The Trusted Certificate setting allows user to import trusted certificates and keys.

### Import Trusted CA Certificate

Trusted CA Certificate List

# Chapter 4 Field Communication (not supported)

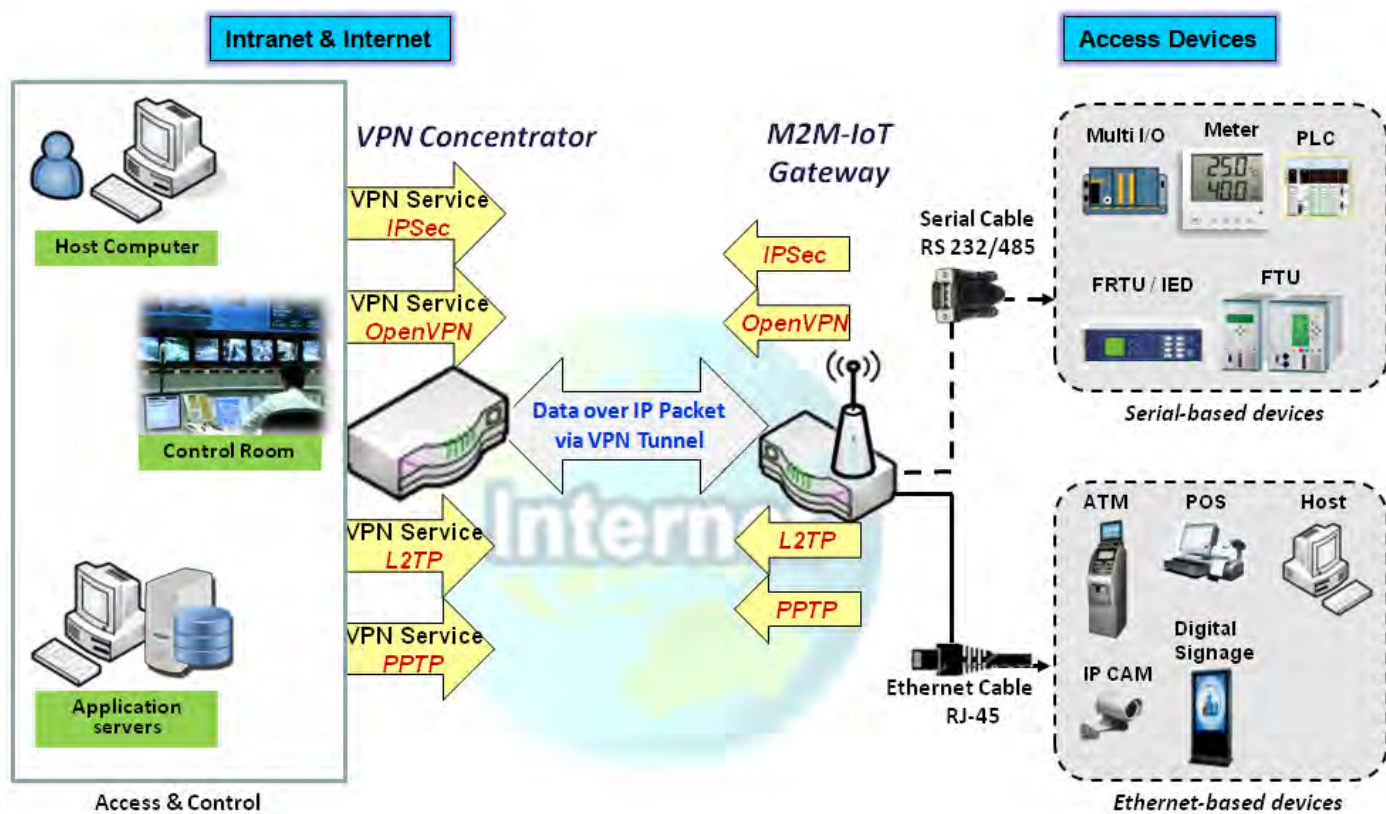

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## Chapter 5 Security

### 5.1 VPN

A virtual private network (VPN) extends a private network across a public network, such as the Internet. It enables a computer to send and receive data across shared or public networks as if it were directly connected to the private network, while benefitting from the functionality, security and management policies of the private network. This is done by establishing a virtual point-to-point connection through the use of dedicated connections, encryption, or a combination of the two. The tunnel technology supports data confidentiality, data origin authentication and data integrity of network information by utilizing encapsulation protocols, encryption algorithms, and hashing algorithms.

The product series supports different tunneling technologies to establish secure tunnels between multiple sites for data transferring, such as IPSec, OpenVPN, L2TP (over IPSec), PPTP and GRE. Besides, some advanced functions, like Full Tunnel, Tunnel Failover, Tunnel Load Balance, NetBIOS over IPSec, NAT Traversal and Dynamic VPN, are also supported.

# M2M Cellular Gateway

## 5.1.1 IPSec

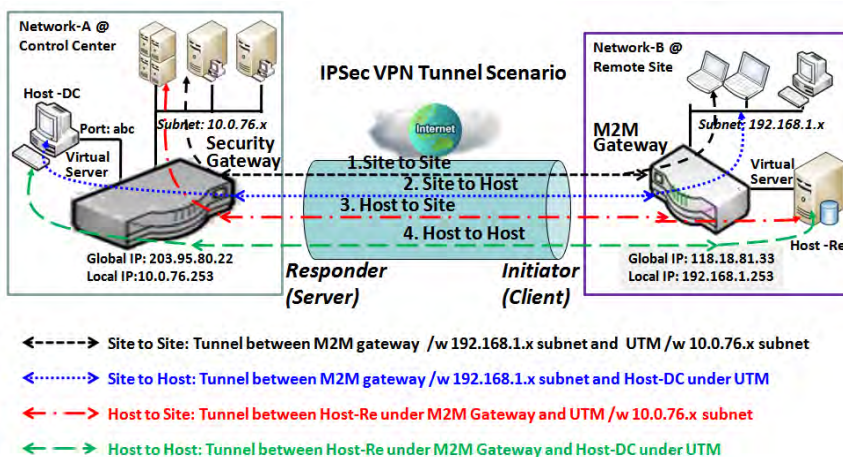

Configuration [ Help ]								
Item			Setting					
IPSec			<input type="checkbox"/> Enable					
NetBIOS over IPSec			<input type="checkbox"/> Enable					
NAT Traversal			<input checked="" type="checkbox"/> Enable					
Max. Concurrent IPSec Tunnels			3					

IPSec Tunnel List Add Delete Refresh								
ID	Tunnel Name	Interface	Tunnel Scenario	Remote Gateway	Remote Subnet	Status	Enable	Actions

Internet Protocol Security (IPSec) is a protocol suite for securing Internet Protocol (IP) communications by authenticating and encrypting each IP packet of a communication session. IPSec includes protocols for establishing mutual authentication between agents at the beginning of the session and negotiation of cryptographic keys to be used during the session.

An IPSec VPN tunnel is established between IPSec client and server. Sometimes, we call the IPSec VPN client as the initiator and the IPSec VPN server as the responder. This gateway can be configured as different roles and establish number of tunnels with various remote devices. Before going to setup the VPN connections, you may need to decide the scenario type for the tunneling.

### IPSec Tunnel Scenarios

To build IPSec tunnel, you need to fill in remote gateway global IP, and optional subnet if the hosts behind IPSec peer can access to remote site or hosts. Under such configuration, there are four scenarios:

**Site to Site:** You need to setup remote gateway IP and subnet of both gateways. After the IPSec tunnel established, hosts behind both gateways can communication each other through the tunnel.

**Site to Host:** Site to Host is suitable for tunneling between clients in a subnet and an application server (host).

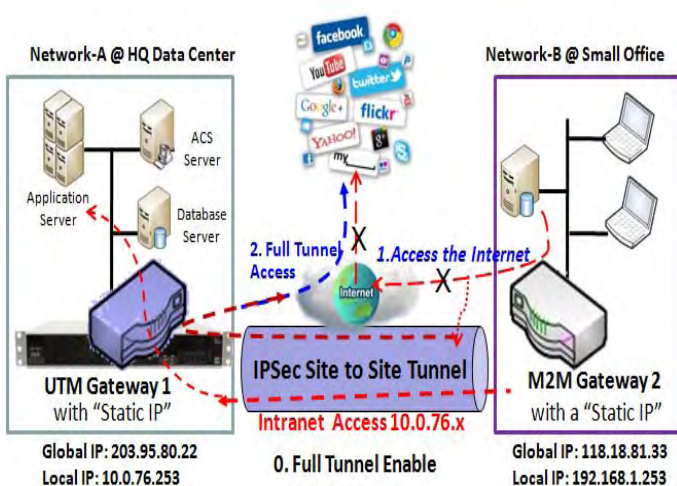

# M2M Cellular Gateway

As in the diagram, the clients behind the M2M gateway can access to the host "Host-DC" located in the control center through Site to Host VPN tunnel.

**Host to Site:** On the contrast, for a single host (or mobile user to) to access the resources located in an intranet, the Host to Site scenario can be applied.

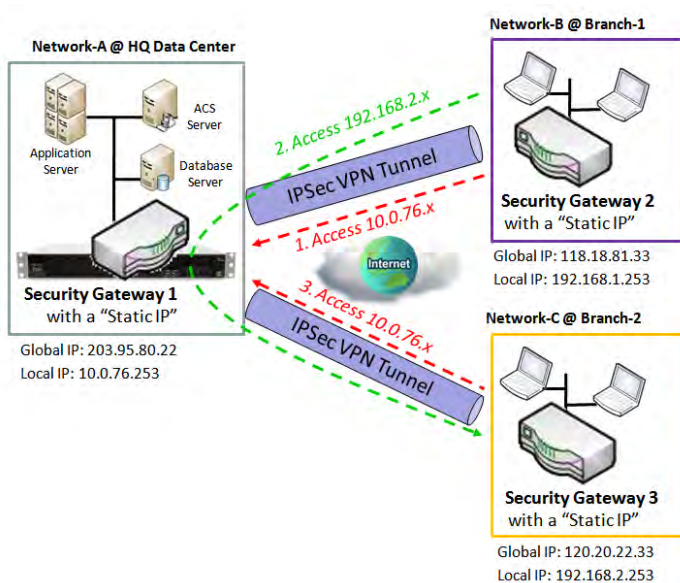

**Host to Host:** Host to Host is a special configuration for building a VPN tunnel between two single hosts.

## Site to Site with "Full Tunnel" enabled

In "Site to Site" scenario, client hosts in remote site can access the enterprise resources in the Intranet of HQ gateway via an established IPsec tunnel, as described above. However, Internet access originates from remote site still go through its regular WAN connection. If you want all packets from remote site to be routed via this IPsec tunnel, including HQ server access and Internet access, you can just enable the "Full Tunnel" setting. As a result, every time users surfs web or searching data on Internet, checking personal emails, or HQ server access, all traffics will go through the secure IPsec tunnel and route by the Security Gateway in control center.

## Site to Site with "Hub and Spoke" mechanism

For a control center to manage the secure Intranet among all its remote sites, there is a simple configuration, called **Hub and Spoke**, for the whole VPN network. A Hub and Spoke VPN Network is set up in organizations with centralized control center over all its remote sites, like shops or offices. The control center acts as the Hub role and the remote shops or Offices act as Spokes. All VPN tunnels from remote sites terminate at this Hub, which acts as a concentrator. Site-to-site connections between spokes do not exist. Traffic originating from one spoke and destined for another spoke has to go via the Hub. Under such configuration, you don't need to maintain VPN tunnels between each two remote clients.

# M2M Cellular Gateway

## IPSec Setting

Go to **Security > VPN > IPSec** tab.

The IPSec Setting allows user to create and configure IPSec tunnels.

### Enable IPSec

Configuration <span>[ Help ]</span>	
Item	Setting
▶ IPSec	<input type="checkbox"/> Enable
▶ NetBIOS over IPSec	<input type="checkbox"/> Enable
▶ NAT Traversal	<input checked="" type="checkbox"/> Enable
▶ Max. Concurrent IPSec Tunnels	3

Configuration Window		
Item	Value setting	Description
IPsec	Unchecked by default	Click the <b>Enable</b> box to enable IPSec function.
NetBIOS over IPSec	Unchecked by default	Click the <b>Enable</b> box to enable NetBIOS over IPSec function.
NAT Traversal	Checked by default	Click the <b>Enable</b> box to enable NAT Traversal function.
Max. Concurrent IPSec Tunnels	Depends on Product specification.	The specified value will limit the maximum number of simultaneous IPSec tunnel connection. The default value can be different for the purchased model.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

### Create/Edit IPSec tunnel

Ensure that the IPSec enable box is checked to enable before further configuring the IPSec tunnel settings.

IPSec Tunnel List <span>Add</span> <span>Delete</span> <span>Refresh</span>								
ID	Tunnel Name	Interface	Tunnel Scenario	Remote Gateway	Remote Subnet	Status	Enable	Actions

When **Add/Edit** button is applied, a series of configuration screens will appear. They are Tunnel Configuration, Local & Remote Configuration, Authentication, IKE Phase, IKE Proposal Definition, IPSec Phase, and IPSec Proposal Definition. You have to configure the tunnel details for both local and remote VPN devices.

## M2M Cellular Gateway

Tunnel Configuration	
Item	Setting
▶ Tunnel	<input type="checkbox"/> Enable
▶ Tunnel Name	<input type="text" value="IPSec #1"/>
▶ Interface	<input type="text" value="WAN1"/>
▶ Tunnel Scenario	<input type="text" value="Site to Site"/>
▶ Tunnel TCP MSS	<input type="text" value="Auto"/> <input type="text" value="0"/> (64~1500 Bytes)
▶ Hub and Spoke	<input type="text" value="None"/>
▶ Operation Mode	<input type="text" value="Always on"/>
▶ Encapsulation Protocol	<input type="text" value="ESP"/>

Tunnel Configuration Window		
Item	Value setting	Description
<b>Tunnel</b>	Unchecked by default	Check the <b>Enable</b> box to activate the IPSec tunnel
<b>Tunnel Name</b>	1. A Must fill setting 2. String format can be any text	Enter a tunnel name. Enter a name that is easy for you to identify. <b>Value Range:</b> 1 ~ 19 characters.
<b>Interface</b>	1. A Must fill setting 2. <b>WAN 1</b> is selected by default	Select the interface on which IPSec tunnel is to be established. It can be the available WAN and LAN interfaces.
<b>Tunnel Scenario</b>	1. A Must fill setting 2. <b>Site to site</b> is selected by default	Select an IPSec tunneling scenario from the dropdown box for your application. Select <b>Site-to-Site</b> , <b>Site-to-Host</b> , <b>Host-to-Site</b> , or <b>Host-to-Host</b> . If LAN interface is selected, only <b>Host-to-Host</b> scenario is available.  With <b>Site-to-Site</b> or <b>Site-to-Host</b> or <b>Host-to-Site</b> , IPSec operates in tunnel mode. The difference among them is the number of subnets. With <b>Host-to-Host</b> , IPSec operates in transport mode.
<b>Tunnel TCP MSS</b>	1. An optional setting 2. <b>Auto</b> is set by default	Select from the dropdown box to define the size of Tunnel TCP MSS. Select <b>Auto</b> , and all devices will adjust this parameter automatically. Select <b>Manual</b> , and specify an expected value for Tunnel TCP MSS. <b>Value Range:</b> 64 ~ 1500 bytes.
<b>Hub and Spoke</b>	1. An optional setting 2. <b>None</b> is set by default	Select from the dropdown box to setup your gateway for Hub-and-Spoke IPSec VPN Deployments. Select <b>None</b> if your deployments will not support Hub or Spoke encryption. Select <b>Hub</b> for a Hub role in the IPSec design. Select <b>Spoke</b> for a Spoke role in the IPSec design. Note: Hub and Spoke are available only for Site-to-Site VPN tunneling specified in Tunnel Scenario. It is not available for Dynamic VPN tunneling application.
<b>Operation Mode</b>	1. A Must fill setting 2. <b>Always on</b> is selected	Define operation mode for the IPSec Tunnel. It can be <b>Always On</b> , or <b>Failover</b> . If this tunnel is set as a failover tunnel, you need to further select a primary

## M2M Cellular Gateway

	by default	tunnel from which to failover to. Note: <b>Failover</b> mode is not available for the gateway with single WAN.
<b>Encapsulation Protocol</b>	1. A Must fill setting 2. <b>ESP</b> is selected by default	Select the Encapsulation Protocol from the dropdown box for this IPSec tunnel. Available encapsulations are <b>ESP</b> and <b>AH</b> .

Local & Remote Configuration

Item	Setting			
▶ Local Subnet List	ID	Subnet IP Address	Subnet Mask	Actions
	1	<input type="text" value="192.168.123.0"/>	<input type="text" value="255.255.255.0(/24)"/>	<input type="button" value="Delete"/>
	<input type="button" value="Add"/>			
▶ Redirect Traffic	<input type="checkbox"/> Enable			
▶ Full Tunnel	<input type="checkbox"/> Enable			
▶ Remote Subnet List	ID	Subnet IP Address	Subnet Mask	Actions
	1	<input type="text"/>	<input type="text" value="255.255.255.0(/24)"/>	<input type="button" value="Delete"/>
	<input type="button" value="Add"/>			
▶ Remote Gateway	<input type="text"/> (IP Address/FQDN)			

Local & Remote Configuration Window		
Item	Value setting	Description
<b>Local Subnet List</b>	A Must fill setting	Specify the Local Subnet IP address and Subnet Mask. Click the Add or Delete button to add or delete a Local Subnet.  Note_1: When Dynamic VPN option in Tunnel Scenario is selected, there will be only one subnet available. Note_2: When Host-to-Site or Host-to-Host option in Tunnel Scenario is selected, Local Subnet will not be available. Note_3: When Hub and Spoke option in Hub and Spoke is selected, there will be only one subnet available.
<b>Redirect Traffic</b>	Unchecked by default	Click <b>Enable</b> box to activate the Redirect Traffic function.  Note: Redirect Traffic is available only for Host-to-Site specified in Tunnel Scenario. By default, it is disabled, so it can prevent the un-expected and dangerous access to the peer subnet. If you enable such function, all the network devices behind the VPN host (actually, it is an NAT gateway) can access to the peer subnet with the host IP.
<b>Full Tunnel</b>	Unchecked by default	Click <b>Enable</b> box to enable Full Tunnel. Note: Full tunnel is available only for Site-to-Site specified in Tunnel Scenario.

## M2M Cellular Gateway

<b>Remote Subnet List</b>	A Must fill setting	Specify the Remote Subnet IP address and Subnet Mask. Click the Add or Delete button to add or delete Remote Subnet setting.
<b>Remote Gateway</b>	1. A Must fill setting. 2. Format can be a ipv4 address or FQDN	Specify the Remote Gateway.

Authentication	
Item	Setting
▶ Key Management	<div> <div>IKE+Pre-shared Key ▼</div> <div></div> <div>(Min. 8 characters)</div> </div>
▶ Local ID	Type: <div>User Name ▼</div> ID: <div></div> (Optional)
▶ Remote ID	Type: <div>User Name ▼</div> ID: <div></div>

Authentication Configuration Window		
Item	Value setting	Description
<b>Key Management</b>	1. A Must fill setting 2. Pre-shared Key 8 to 32 characters.	Select Key Management from the dropdown box for this IPSec tunnel. <b>IKE+Pre-shared Key</b> : user needs to set a key (8 ~ 32 characters). <b>IKE+X.509</b> : user needs Certificate to authenticate. IKE+X.509 will be available only when Certificate has been configured properly. Refer to Certificate section of this manual and also <b>Object Definition &gt; Certificate</b> in web-based utility. <b>Manually</b> : user needs to enter key ID to authenticate. Manual key configuration will be explained in the following Manual Key Management section.
<b>Local ID</b>	An optional setting	Specify the Local ID for this IPSec tunnel to authenticate. Select <b>User Name</b> for Local ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Local ID and enter the User@FQDN. Select <b>Key ID</b> for Local ID and enter the Key ID (English alphabet or number).
<b>Remote ID</b>	An optional setting	Specify the Remote ID for this IPSec tunnel to authenticate. Select <b>User Name</b> for Remote ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Remote ID and enter the User@FQDN. Select <b>Key ID</b> for Remote ID and enter the Key ID (English alphabet or number). Note: Remote ID will be not available when Dynamic VPN option in Tunnel Scenario is selected.

## M2M Cellular Gateway

IKE Phase	
Item	Setting
IKE Version	v1 ▼
Negotiation Mode	Main Mode ▼
X-Auth	None ▼ <span>X-Auth Account (Optional)</span> User Name : <input type="text"/> Password : <input type="password"/>
Dead Peer Detection (DPD)	<input checked="" type="checkbox"/> Enable Timeout : <input type="text" value="180"/> (seconds) Delay : <input type="text" value="30"/> (seconds)
Phase1 Key Life Time	<input type="text" value="3600"/> (seconds) (Max. 86400)

IKE Phase Window		
Item	Value setting	Description
<b>IKE Version</b>	1. A must fill setting 2. v1 is selected by default	Specify the IKE version for this IPSec tunnel. Select v1 or v2 Note: IKE versions will not be available when Dynamic VPN option in Tunnel Scenario is selected, or AH option in Encapsulation Protocol is selected.
<b>Negotiation Mode</b>	Main Mode is set by default default	Specify the Negotiation Mode for this IPSec tunnel. Select Main Mode or Aggressive Mode.
<b>X-Auth</b>	None is selected by default	Specify the X-Auth role for this IPSec tunnel. Select Server, Client, or None. Selected None no X-Auth authentication is required. Selected Server this gateway will be an X-Auth server. Click on the X-Auth Account button to create remote X-Auth client account. Selected Client this gateway will be an X-Auth client. Enter User name and Password to be authenticated by the X-Auth server gateway. Note: X-Auth Client will not be available for Dynamic VPN option selected in Tunnel Scenario.
<b>Dead Peer Detection (DPD)</b>	1. Checked by default 2. Default Timeout 180s and Delay 30s	Click <b>Enable</b> box to enable <b>DPD</b> function. Specify the <b>Timeout</b> and <b>Delay</b> time in seconds. <b>Value Range: 0 ~ 999 seconds for Timeout and Delay.</b>
<b>Phase1 Key Life Time</b>	1. A Must fill setting 2. Default 3600s 3. Max. 86400s	Specify the Phase1 Key Life Time. <b>Value Range: 30 ~ 86400.</b>

## M2M Cellular Gateway

	2. Pre-shared Key 8 to 32 characters.	<b>IKE+Pre-shared Key</b> ; user needs to set a key (8 ~ 32 characters).
<b>Local ID</b>	An optional setting	<p>Specify the Local ID for this IPSec tunnel to authenticate.</p> <p>Select <b>User Name</b> for Local ID and enter the username. The username may include but can't be all numbers.</p> <p>Select <b>FQDN</b> for Local ID and enter the FQDN.</p> <p>Select <b>User@FQDN</b> for Local ID and enter the User@FQDN.</p> <p>Select <b>Key ID</b> for Local ID and enter the Key ID (English alphabet or number).</p>
<b>Remote ID</b>	An optional setting	<p>Specify the Remote ID for this IPSec tunnel to authenticate.</p> <p>Select <b>User Name</b> for Remote ID and enter the username. The username may include but can't be all numbers.</p> <p>Select <b>FQDN</b> for Local ID and enter the FQDN.</p> <p>Select <b>User@FQDN</b> for Remote ID and enter the User@FQDN.</p> <p>Select <b>Key ID</b> for Remote ID and enter the Key ID (English alphabet or number).</p> <p>Note: Remote ID will be not available when Dynamic VPN option in Tunnel Scenario is selected.</p>

For the rest IKE Phase, IKE Proposal Definition, IPSec Phase, and IPSec Proposal Definition settings, they are the same as that of creating an IPSec Tunnel described in previous section. Please refer to the related description.

# M2M Cellular Gateway

## 5.1.2 OpenVPN

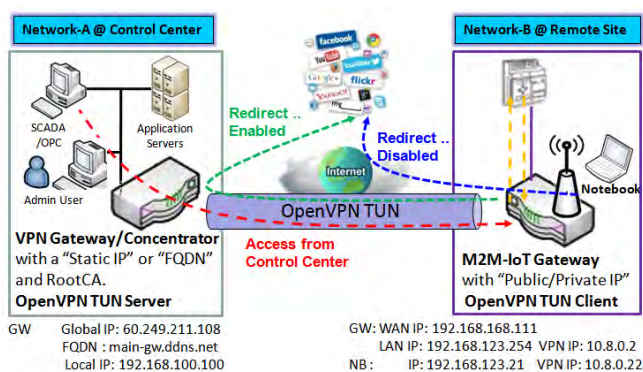

OpenVPN is an application that implements virtual private network (VPN) techniques for creating secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. It uses a custom security protocol that utilizes SSL/TLS for key exchange. It is capable of traversing network address translators (NATs) and firewalls.

OpenVPN allows peers to authenticate each other using a Static Key (pre-shared key) or certificates. When used in a multi-client-server configuration, it allows the server to release an authentication certificate for every client, using signature and certificate authority. It uses the OpenSSL encryption library extensively, as well as the SSLv3/TLSv1 protocol, and contains many security and control features.

OpenVPN Tunneling is a Client and Server based tunneling technology. The OpenVPN Server must have a Static IP or a FQDN, and maintain a Client list. The OpenVPN Client may be a mobile user or mobile site with public IP or private IP, and requesting the OpenVPN tunnel connection. The product can only behave as a OpenVPN Client role for an OpenVPN tunnel connection.

There are two OpenVPN connection scenarios. They are the TAP and TUN scenarios. The product can create either a layer-3 based IP tunnel (TUN), or a layer-2 based Ethernet TAP that can carry any type of Ethernet traffic. In addition to configuring the device as a Server or Client, you have to specify which type of OpenVPN connection scenario is to be adopted.

### OpenVPN TUN Scenario

1. M2M-IoT Gateway (as OpenVPN TUN Client) connects to peer VPN Gateway/Concentrator (as OpenVPN TUN Server).
2. M2M-IoT Gateway will be assigned 10.8.0.2 IP Address after OpenVPN TUN Connection established. (10.8.0.x is a virtual subnet)
3. Local networked device will get a virtual IP 10.8.0.x if its traffic goes through the OpenVPN TUN connection (when NAT disabled & Redirect Internet Traffic enabled).
4. SCADA Server in Control Center can access remote attached device(s) with the assigned IP Address 10.8.0.2.

solution.

The term "TUN" mode is referred to routing mode and operates with layer 3 packets. In routing mode, the VPN client is given an IP address on a different subnet than the local LAN under the OpenVPN server. This virtual subnet is created for connecting to any remote VPN computers. In routing mode, the OpenVPN server creates a "TUN" interface with its own IP address pool which is different to the local LAN. Remote hosts that dial-in will get an IP address inside the virtual network and will have access only to the server where OpenVPN resides.

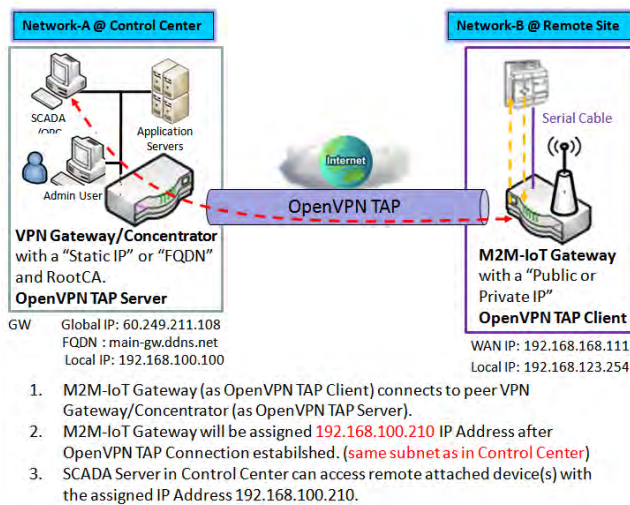

If you want to offer remote access to a VPN server from client(s), and inhibit the access to remote LAN resources under VPN server, OpenVPN TUN mode is the simplest

As shown in the diagram, the M2M-IoT Gateway is configured as an OpenVPN TUN Client, and connects to an OpenVPN TUN Server. Once the OpenVPN TUN connection is established, the connected TUN client will be

# M2M Cellular Gateway

assigned a virtual IP (10.8.0.2) which is belong to a virtual subnet that is different to the local subnet in Control Center. With such connection, the local networked devices will get a virtual IP 10.8.0.x if its traffic goes through the OpenVPN TUN connection when Redirect Internet Traffic settings is enabled; Besides, the SCADA Server in Control Center can access remote attached serial device(s) with the virtual IP address (10.8.0.2).

## OpenVPN TAP Scenario

The term "TAP" is referred to bridge mode and operates with layer 2 packets. In bridge mode, the VPN client is given an IP address on the same subnet as the LAN resided under the OpenVPN server. Under such configuration, the OpenVPN client can directly access to the resources in LAN. If you want to offer remote access to the entire remote LAN for VPN client(s), you have to setup OpenVPN in "TAP" bridge mode.

As shown in the diagram, the M2M-IoT Gateway is configured as an OpenVPN TAP Client, and connects to an OpenVPN TAP Server. Once the OpenVPN TAP connection is established, the connected TAP client will be assigned a virtual IP (192.168.100.210) which is the same subnet as

that of local subnet in Control Center. With such connection, the SCADA Server in Control Center can access remote attached serial device(s) with the virtual IP address (192.168.100.210).

# M2M Cellular Gateway

## Open VPN Setting

Go to **Security > VPN > OpenVPN** tab.

The OpenVPN setting allows user to create and configure OpenVPN tunnels.

### Enable OpenVPN

Configuration	
Item	Setting
▶ OpenVPN	<input type="checkbox"/> Enable
▶ Client	<div>Client ▾</div>

Configuration		
Item	Value setting	Description
<b>OpenVPN</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the OpenVPN function.
<b>Client</b>	<b>Client</b> is selected by default.	Only <b>Client</b> is available, you can specify the client settings in another client configuration window.

# M2M Cellular Gateway

## As an OpenVPN Client

If **Client** is selected, an OpenVPN Client List screen will appear.

OpenVPN Client List <span>Add</span> <span>Delete</span>														
ID	Client Name	Interface	Protocol	Port	Tunnel Scenario	Remote IP/FQDN	Remote Subnet	Redirect Internet Traffic	NAT	Authorization Mode	Encryption Cipher	Hash Algorithm	Enable	Actions

When **Add** button is applied, OpenVPN Client Configuration screen will appear. **OpenVPN Client Configuration** window let you specify the required parameters for an OpenVPN VPN client, such as "OpenVPN Client Name", "Interface", "Protocol", "Tunnel Scenario", "Remote IP/FQDN", "Remote Subnet", "Authorization Mode", "Encryption Cipher", "Hash Algorithm" and tunnel activation.

OpenVPN Client Configuration

# M2M Cellular Gateway

OpenVPN Client Configuration		
Item	Value setting	Description
<b>OpenVPN Client Name</b>	A Must filled setting	The <b>OpenVPN Client Name</b> will be used to identify the client in the tunnel list. <b>Value Range:</b> 1 ~ 32 characters.
<b>Interface</b>	1. A Must filled setting 2. By default <b>WAN-1</b> is selected.	Define the physical interface to be used for this OpenVPN Client tunnel.
<b>Protocol</b>	1. A Must filled setting 2. By default <b>TCP</b> is selected.	Define the <b>Protocol</b> for the OpenVPN Client. <ul style="list-style-type: none"> <li>• Select <b>TCP</b> -&gt;The OpenVPN will use TCP protocol, and <b>Port</b> will be set as 443 automatically.</li> <li>• Select <b>UDP</b> -&gt; The OpenVPN will use UDP protocol, and <b>Port</b> will be set as 1194 automatically.</li> </ul>
<b>Port</b>	1. A Must filled setting 2. By default <b>443</b> is set.	Specify the <b>Port</b> for the OpenVPN Client to use. <b>Value Range:</b> 1 ~ 65535.
<b>Tunnel Scenario</b>	1. A Must filled setting 2. By default <b>TUN</b> is selected.	Specify the type of <b>Tunnel Scenario</b> for the OpenVPN Client to use. It can be <b>TUN</b> for TUN tunnel scenario, or <b>TAP</b> for TAP tunnel scenario.
<b>Remote IP/FQDN</b>	A Must filled setting	Specify the <b>Remote IP/FQDN</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the IP address or FQDN.
<b>Remote Subnet</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate remote subnet function, and specify <b>Remote Subnet</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the remote subnet address and remote subnet mask.
<b>Redirect Internet Traffic</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>Redirect Internet Traffic</b> function.
<b>NAT</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>NAT</b> function.
<b>Authorization Mode</b>	1. A Must filled setting 2. By default <b>TLS</b> is selected.	Specify the authorization mode for the OpenVPN Server. <ul style="list-style-type: none"> <li>• <b>TLS</b> -&gt;The OpenVPN will use TLS authorization mode, and the following items <b>CA Cert.</b>, <b>Client Cert.</b> and <b>Client Key</b> will be displayed. <b>CA Cert.</b> could be selected in Trusted CA Certificate List. Refer to <b>Object Definition &gt; Certificate &gt; Trusted Certificate</b>. <b>Client Cert.</b> could be selected in Local Certificate List. Refer to <b>Object Definition &gt; Certificate &gt; My Certificate</b>. <b>Client Key</b> could be selected in Trusted Client key List. Refer to <b>Object Definition &gt; Certificate &gt; Trusted Certificate</b>.</li> <li>• <b>Static Key</b> -&gt;The OpenVPN will use static key authorization mode, and the following items <b>Local Endpoint IP Address</b>, <b>Remote Endpoint IP Address</b> and <b>Static Key</b> will be displayed.</li> </ul>
<b>Local Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Local Endpoint IP Address</b> of this OpenVPN gateway. <b>Value Range:</b> The IP format is 10.8.0.x, the range of x is 1~254. Note: Local Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.

## M2M Cellular Gateway

<b>Remote Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Remote Endpoint IP Address</b> of the peer OpenVPN gateway. <b>Value Range:</b> The IP format is 10.8.0.x, the range of x is 1~254. Note: Remote Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.
<b>Static Key</b>	A Must filled setting	Specify the <b>Static Key</b> . Note: Static Key will be available only when Static Key is chosen in Authorization Mode.
<b>Encryption Cipher</b>	By default <b>Blowfish</b> is selected.	Specify the <b>Encryption Cipher</b> . It can be <b>Blowfish/AES-256/AES-192/AES-128/None</b> .
<b>Hash Algorithm</b>	By default <b>SHA-1</b> is selected.	Specify the <b>Hash Algorithm</b> . It can be <b>SHA-1/MD5/MD4/SHA2-256/SHA2-512/None/Disable</b> .
<b>LZO Compression</b>	By default <b>Adaptive</b> is selected.	Specify the <b>LZO Compression</b> scheme. It can be <b>Adaptive/YES/NO/Default</b> .
<b>Persis Key</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Key</b> function.
<b>Persis Tun</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Tun</b> function.
<b>Advanced Configuration</b>	N/A	Click the <b>Edit</b> button to specify the <b>Advanced Configuration</b> setting for the OpenVPN server. If the button is clicked, <b>Advanced Configuration</b> will be displayed below.
<b>Tunnel</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate this OpenVPN tunnel.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the changes.
<b>Back</b>	N/A	Click <b>Back</b> to return to last page.

## M2M Cellular Gateway

When **Advanced Configuration** is selected, an OpenVPN Client Advanced Configuration screen will appear.

▶ Additional Configuration	<input type="text"/>

OpenVPN Advanced Client Configuration		
Item	Value setting	Description
<b>TLS Cipher</b>	1. A Must filled setting. 2. <b>TLS-RSA-WITH-AES128-SHA</b> is selected by default	Specify the <b>TLS Cipher</b> from the dropdown list. It can be <b>None</b> / <b>TLS-RSA-WITH-RC4-MD5</b> / <b>TLS-RSA-WITH-AES128-SHA</b> / <b>TLS-RSA-WITH-AES256-SHA</b> / <b>TLS-DHE-DSS-AES128-SHA</b> / <b>TLS-DHE-DSS-AES256-SHA</b> . Note: TLS Cipher will be available only when TLS is chosen in Authorization Mode.
<b>TLS Auth. Key</b>	1. An Optional setting. 2. String format: any text	Specify the <b>TLS Auth. Key</b> for connecting to an OpenVPN server, if the server required it. Note: TLS Auth. Key will be available only when TLS is chosen in Authorization Mode.

## M2M Cellular Gateway

<b>User Name</b>	An Optional setting.	Enter the <b>User account</b> for connecting to an OpenVPN server, if the server required it. Note: User Name will be available only when TLS is chosen in Authorization Mode.
<b>Password</b>	An Optional setting.	Enter the <b>Password</b> for connecting to an OpenVPN server, if the server required it. Note: User Name will be available only when TLS is chosen in Authorization Mode.
<b>Bridge TAP to</b>	By default <b>VLAN 1</b> is selected	Specify the setting of “ <b>Bridge TAP to</b> ” to bridge the TAP interface to a certain local network interface or VLAN. Note: Bridge TAP to will be available only when TAP is chosen in Tunnel Scenario and NAT is unchecked.
<b>Firewall Protection</b>	The box is unchecked by default.	Check the box to activate the <b>Firewall Protection</b> function. Note: Firewall Protection will be available only when NAT is enabled.
<b>Client IP Address</b>	By default <b>Dynamic IP</b> is selected	Specify the virtual IP Address for the OpenVPN Client. It can be <b>Dynamic IP/Static IP</b> .
<b>Tunnel MTU</b>	1.A Must filled setting 2.The value is 1500 by default	Specify the value of <b>Tunnel MTU</b> . <b>Value Range: 0 ~ 1500.</b>
<b>Tunnel UDP Fragment</b>	The value is 1500 by default	Specify the value of <b>Tunnel UDP Fragment</b> . <b>Value Range: 0 ~ 1500.</b> Note: Tunnel UDP Fragment will be available only when UDP is chosen in Protocol.
<b>Tunnel UDP MSS-Fix</b>	The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>Tunnel UDP MSS-Fix</b> function. Note: Tunnel UDP MSS-Fix will be available only when UDP is chosen in Protocol.
<b>nsCerType Verification</b>	The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>nsCerType Verification</b> function. Note: nsCerType Verification will be available only when TLS is chosen in Authorization Mode.
<b>TLS Renegotiation Time (seconds)</b>	The value is 3600 by default	Specify the time interval of <b>TLS Renegotiation Time</b> . <b>Value Range: -1 ~ 86400.</b>
<b>Connection Retry(seconds)</b>	The value is -1 by default	Specify the time interval of <b>Connection Retry</b> . The default -1 means that it is no need to execute connection retry. <b>Value Range: -1 ~ 86400, and -1 means no retry is required.</b>
<b>DNS</b>	By default <b>Automatically</b> is selected	Specify the setting of <b>DNS</b> . It can be <b>Automatically/Manually</b> .
<b>Additional Configuration</b>	An Optional setting.	Enter optional configuration string here. Up to 256 characters is allowable. <b>Value Range: 0 ~ 256characters.</b>
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the changes.
<b>Back</b>	N/A	Click <b>Back</b> to return to last page.

▶ L2TP Client	<input type="checkbox"/> Enable

L2TP Client List & Status <span>Add</span> <span>Delete</span> <span>Refresh</span>								
ID	Tunnel Name	Interface	Virtual IP	Remote IP/FQDN	Remote Subnet	Status	Enable	Actions

Layer 2 Tunneling Protocol (L2TP) is a tunneling protocol used to support virtual private networks (VPNs) or as part of the delivery of services by ISPs. It does not provide any encryption or confidentiality by itself. Rather, it relies on an encryption protocol that it passes within the tunnel to provide privacy. This Gateway can only behave as a L2TP client for a L2TP VPN tunnel.

**L2TP Client:** It can be mobile users or gateways in remote offices with dynamic IP. To setup tunnel, it should get “user name”, “password” and server’s global IP. In addition, it is required to identify the operation mode for each tunnel as main connection, failover for another tunnel, or load balance tunnel to increase overall bandwidth. It needs to decide “Default Gateway” or “Remote Subnet” for packet flow. Moreover, you can also define what kind of traffics will pass through the L2TP tunnel in the “Default Gateway / Remote Subnet” parameter.

Besides, for the L2TP client peer, a Remote Subnet item is required. It is for the Intranet of L2TP server peer. So, at L2TP client peer, the packets whose destination is in the dedicated subnet will be transferred via the L2TP tunnel. Others will be transferred based on current routing policy of the gateway at L2TP client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the L2TP client peer, all packets, including the Internet accessing of L2TP client peer, will go through the established L2TP tunnel. That means the

# M2M Cellular Gateway

remote L2TP server peer controls the flow of any packets from the L2TP client peer. Certainly, those packets come through the L2TP tunnel.

## L2TP Setting

Go to **Security > VPN > L2TP** tab.

The L2TP setting allows user to create and configure L2TP tunnels.

### Enable L2TP

Item	Setting	Description
Tunnel Name	A Must filled setting	Enter a tunnel name. Enter a name that is easy for you to identify. <b>Value Range:</b> 1 ~ 32 characters.
Interface	A Must filled setting	Define the selected interface to be the used for this L2TP tunnel (WAN-1 is available only when WAN-1 interface is enabled)

## M2M Cellular Gateway

		The same applies to other WAN interfaces (e.g. <b>WAN-2</b> ).
<b>Operation Mode</b>	1. A Must filled setting 2. <b>Always on</b> is selected by default	Define operation mode for the L2TP Tunnel. It can be <b>Always On</b> , or <b>Failover</b> . If this tunnel is set as a failover tunnel, you need to further select a primary tunnel from which to failover to. Note: <b>Failover</b> mode is not available for the gateway with single WAN.
<b>L2TP over IPSec</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate L2TP over IPSec, and further specify a Pre-shared Key ( <b>8~32 characters</b> ).
<b>Remote LNS IP/FQDN</b>	A Must filled setting	Enter the public IP address or the FQDN of the L2TP server.
<b>Remote LNS Port</b>	1. A Must filled setting 2. <b>1701</b> is set by default	Enter the Remote LNS Port for this L2TP tunnel. <b>Value Range:</b> 1 ~ 65535.
<b>User Name</b>	A Must filled setting	Enter the <b>User Name</b> for this L2TP tunnel to be authenticated when connect to L2TP server. <b>Value Range:</b> 1 ~ 32 characters.
<b>Password</b>	A Must filled setting	Enter the <b>Password</b> for this L2TP tunnel to be authenticated when connect to L2TP server.
<b>Tunneling Password(Optional)</b>	The box is unchecked by default	Enter the <b>Tunneling Password</b> for this L2TP tunnel to authenticate.
<b>Remote Subnet</b>	A Must filled setting	Specify the remote subnet for this L2TP tunnel to reach L2TP server. The Remote Subnet format must be IP address/netmask (e.g. 10.0.0.2/24). It is for the Intranet of L2TP VPN server. So, at L2TP client peer, the packets whose destination is in the dedicated subnet will be transferred via the L2TP VPN tunnel. Others will be transferred based on current routing policy of the security gateway at L2TP client peer. If you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a default gateway setting for the L2TP client peer, all packets, including the Internet accessing of L2TP Client peer, will go through the established L2TP VPN tunnel. That means the remote L2TP VPN server controls the flow of any packets from the L2TP client peer. Certainly, those packets come through the L2TP VPN tunnel.
<b>Authentication Protocol</b>	1. A Must filled setting 2. Unchecked by default	Specify one or multiple <b>Authentication Protocol</b> for this L2TP tunnel. Available authentication methods are <b>PAP / CHAP / MS-CHAP / MS-CHAP v2</b> .
<b>MPPE Encryption</b>	1. Unchecked by default 2. an optional setting	Specify whether L2TP server supports <b>MPPE Protocol</b> . Click the <b>Enable</b> box to enable MPPE. Note: when MPPE Encryption is enabled, the Authentication Protocol <b>PAP / CHAP</b> options will not be available.
<b>LCP Echo Type</b>	1. Auto is set by default	Specify the LCP Echo Type for this L2TP tunnel. It can be <b>Auto</b> , <b>User-defined</b> , or <b>Disable</b> . <b>Auto:</b> the system sets the Interval and Max. Failure Time. <b>User-defined:</b> enter the Interval and Max. Failure Time. The default value for Interval is 30 seconds, and Maximum Failure Times is 6 Times. <b>Disable:</b> disable the LCP Echo. <b>Value Range:</b> 1 ~ 99999 for Interval Time, 1~999 for Failure Time.
<b>Service Port</b>	A Must filled setting	Specify the <b>Service Port</b> for this L2TP tunnel to use. It can be <b>Auto</b> , ( <b>1701</b> ) for

## M2M Cellular Gateway

PPTP Client List & Status

AddDeleteRefresh

ID	Tunnel Name	Interface	Virtual IP	Remote IP/FQDN	Remote Subnet	Status	Enable	Actions
----	-------------	-----------	------------	----------------	---------------	--------	--------	---------

Point-to-Point Tunneling Protocol (PPTP) is a method for implementing virtual private networks. PPTP uses a control channel over TCP and a GRE tunnel operating to encapsulate PPP packets. It is a client-server based technology. There are various levels of authentication and encryption for PPTP tunneling, usually natively as standard features of the Windows PPTP stack. The security gateway can only play "PPTP Client" role for a PPTP VPN tunnel. PPTP tunnel process is nearly the same as L2TP.

**PPTP Client:** It can be mobile users or gateways in remote offices with dynamic IP. To setup tunnel, it should get "user name", "password" and server's global IP. In addition, it is required to identify the operation mode for each tunnel as main connection, failover for another tunnel, or load balance tunnel to increase overall bandwidth. It needs to decide "Default Gateway" or "Remote Subnet" for packet flow. Moreover, you can also define what kind of traffics will pass through the PPTP tunnel in the "Default Gateway / Remote Subnet" parameter.

Besides, for the PPTP client peer, a Remote Subnet item is required. It is for the Intranet of PPTP server peer. So, at PPTP client peer, the packets whose destination is in the dedicated subnet will be transferred via the PPTP tunnel. Others will be transferred based on current routing policy of the gateway at PPTP client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the PPTP client peer, all packets, including the Internet

# M2M Cellular Gateway

accessing of PPTP client peer, will go through the established PPTP tunnel. That means the remote PPTP server peer controls the flow of any packets from the PPTP client peer. Certainly, those packets come through the PPTP tunnel.

## PPTP Setting

Go to **Security > VPN > PPTP** tab.

The PPTP setting allows user to create and configure PPTP tunnels.

## 5.1.5 GRE

Configuration [ Help ]											
Item				Setting							
GRE Tunnel				<input type="checkbox"/> Enable							
Max. Concurrent GRE Tunnels				32							

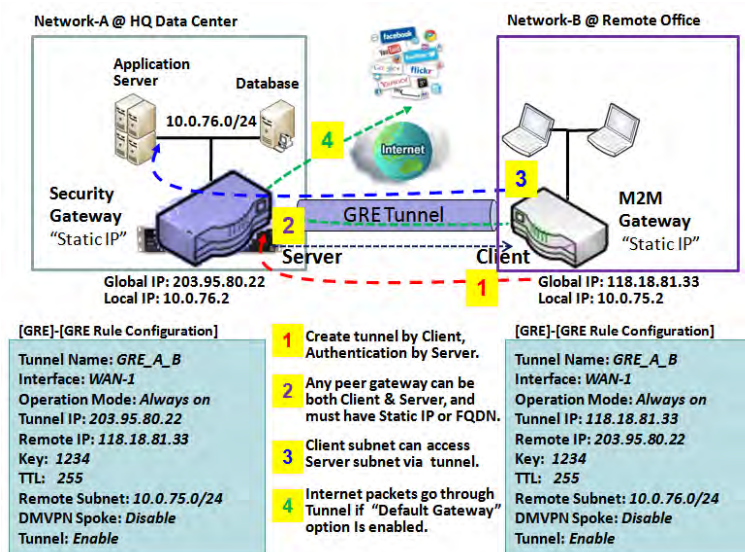

GRE Tunnel List Add Delete											
ID	Tunnel Name	Interface	Operation Mode	Tunnel IP	Remote IP	Key	TTL	Keep-alive	Remote Subnet	Enable	Actions

Generic Routing Encapsulation (GRE) is a tunneling protocol developed by Cisco Systems that encapsulates a wide variety of network layer protocols inside virtual point-to-point links over an Internet Protocol internetwork.

Deploy a M2M gateway for remote site and establish a virtual private network with control center by using GRE tunneling. So, all client hosts behind M2M gateway can make data communication with server hosts behind control center gateway.

GRE Tunneling is similar to IPSec Tunneling, client requesting the tunnel establishment with the server. Both the client and the server must have a Static IP or a FQDN. Any peer gateway can be worked as either a client or a server, even using the same set of configuration rule.

### GRE Tunnel Scenario

Tunnel. That means the remote GRE server peer controls the flow of any packets from the GRE client peer. Certainly, those packets come through the GRE tunnel.

To setup a GRE tunnel, each peer needs to setup its global IP as tunnel IP and fill in the other's global IP as remote IP.

Besides, each peer must further specify the Remote Subnet item. It is for the Intranet of GRE server peer. So, at GRE client peer, the packets whose destination is in the dedicated subnet will be transferred via the GRE tunnel. Others will be transferred based on current routing policy of the gateway at GRE client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the GRE client peer, all packets, including the Internet accessing of GRE client peer, will go through the established GRE

## M2M Cellular Gateway

If the GRE server supports DMVPN Hub function, like Cisco router as the VPN concentrator, the GRE client can active the DMVPN spoke function here since it is implemented by GRE over IPSec tunneling.

### GRE Setting

Go to **Security > VPN > GRE** tab.

The GRE setting allows user to create and configure GRE tunnels.

#### Enable GRE

Configuration [ Help ]	
Item	Setting
GRE Tunnel	<input type="checkbox"/> Enable
Max. Concurrent GRE Tunnels	32

Enable GRE Window		
Item	Value setting	Description
GRE Tunnel	Unchecked by default	Click the <b>Enable</b> box to enable GRE function.
Max. Concurrent GRE Tunnels	Depends on Product specification.	The specified value will limit the maximum number of simultaneous GRE tunnel connection. The default value can be different for the purchased model.
Save	N/A	Click <b>Save</b> button to save the settings
Undo	N/A	Click <b>Undo</b> button to cancel the settings

#### Create/Edit GRE tunnel

GRE Tunnel List <div>AddDelete</div>												
ID	Tunnel Name	Interface	Operation Mode	Tunnel IP	Remote IP	MTU	Key	TTL	Keep-alive	Remote Subnet	Enable	Actions

When **Add/Edit** button is applied, a GRE Rule Configuration screen will appear.

## M2M Cellular Gateway

GRE Rule Configuration [ Help ]	
Item	Setting
▶ Tunnel Name	GRE #1
▶ Interface	WAN1 ▼
▶ Operation Mode	Always on ▼
▶ Tunnel IP	IP: <input type="text"/> MASK: -- select one -- ▼ (Optional)
▶ Remote IP	<input type="text"/>
▶ MTU	<input type="text"/>
▶ Key	<input type="text"/> (Optional)
▶ TTL	<input type="text"/>
▶ Keep alive	<input type="checkbox"/> Enable Ping IP ▼ <input type="text"/> Interval <input type="text"/> 5 (seconds)
▶ Remote Subnet	<input type="text"/>
▶ DMVPN Spoke	<input type="checkbox"/> Enable
▶ IPsec Pre-shared Key	<input type="text"/> (Min. 8 characters)
▶ IPsec NAT Traversal	<input type="checkbox"/> Enable
▶ IPsec Encapsulation Mode	Transport Mode ▼
▶ Tunnel	<input type="checkbox"/> Enable

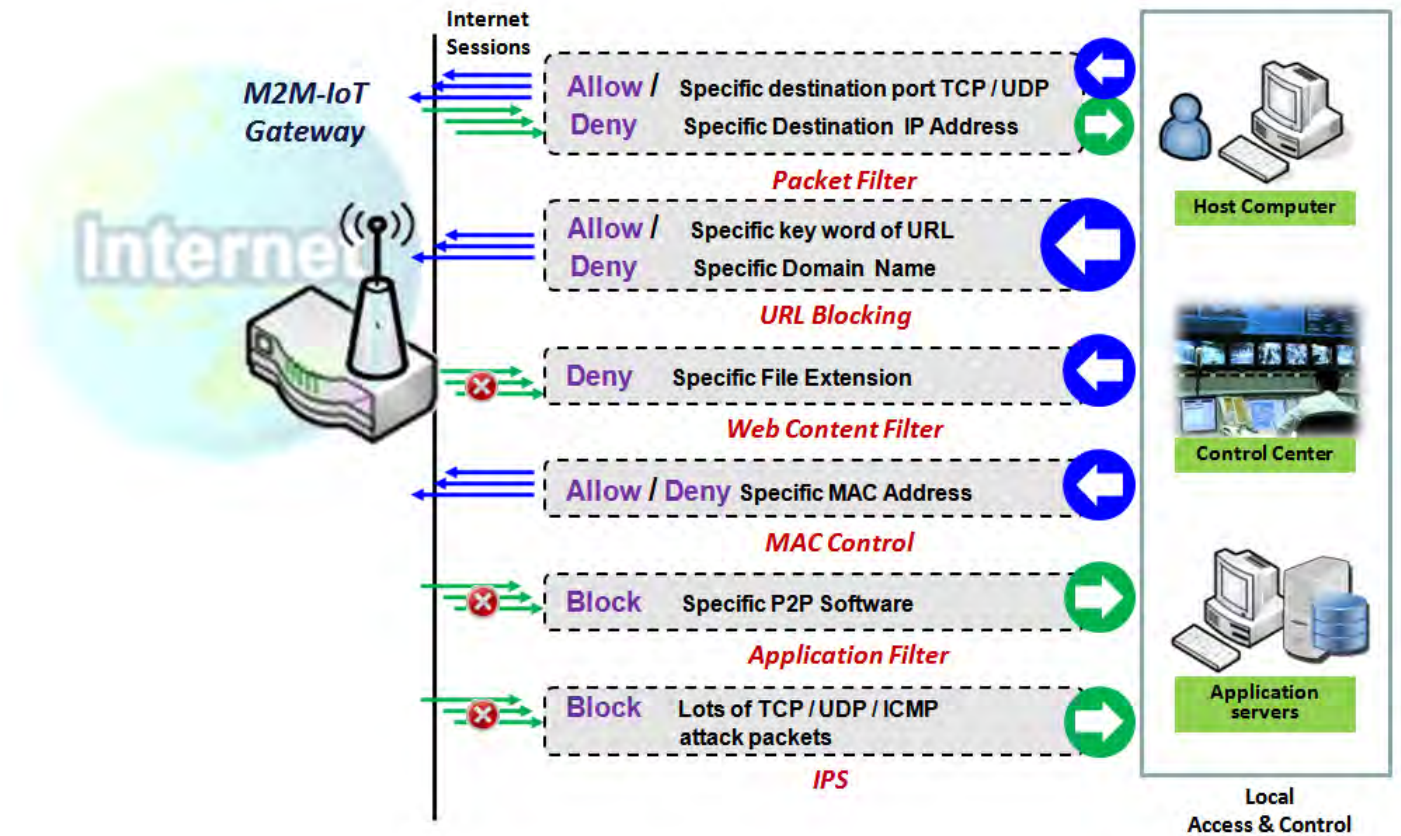

GRE Rule Configuration Window		
Item	Value setting	Description
<b>Tunnel Name</b>	A Must fill setting	Enter a tunnel name. Enter a name that is easy for you to identify. <b>Value Range:</b> 1 ~ 9 characters.
<b>Interface</b>	1. A Must fill setting 2. <b>WAN 1</b> is selected by default	Select the interface on which GRE tunnel is to be established. It can be the available WAN and LAN interfaces.
<b>Operation Mode</b>	1. A Must fill setting 2. <b>Always on</b> is selected by default	Define operation mode for the GRE Tunnel. It can be <b>Always On</b> , or <b>Failover</b> . If this tunnel is set as a failover tunnel, you need to further select a primary tunnel from which to failover to. Note: <b>Failover</b> mode is not available for the gateway with single WAN.
<b>Tunnel IP</b>	An Optional setting	Enter the Tunnel IP address and corresponding subnet mask.
<b>Remote IP</b>	A Must fill setting	Enter the Remote IP address of remote GRE tunnel gateway. Normally this is the public IP address of the remote GRE gateway.
<b>MTU</b>	1. A Must filled setting 2. <b>Auto</b> (value zero) is set by default	<b>MTU</b> refers to Maximum Transmission Unit. It specifies the largest packet size permitted for Internet transmission. When set to <b>Auto</b> (value '0'), the router selects the best MTU for best Internet

## M2M Cellular Gateway

		connection performance. <b>Value Range:</b> 0 ~ 1500.
<b>Key</b>	An Optional setting	Enter the Key for the GRE connection. <b>Value Range:</b> 0 ~ 9999999999.
<b>TTL</b>	1. A Must fill setting 2. 1 to 255 range	Specify <b>TTL</b> hop-count value for this GRE tunnel. <b>Value Range:</b> 1 ~ 255.
<b>Keep alive</b>	1. Unchecked by default 2. 5s is set by default	Check the <b>Enable</b> box to enable Keep alive function. Select Ping IP to keep live and enter the IP address to ping. Enter the ping time interval in seconds. <b>Value Range:</b> 5 ~ 999 seconds.
<b>Remote Subnet</b>	A Must fill setting	Specify the remote subnet for this GRE tunnel. The Remote Subnet format must be IP address/netmask (e.g. 10.0.0.2/24). It is for the Intranet of GRE server peer. So, at GRE client peer, the packets whose destination is in the dedicated subnet will be transferred via the GRE tunnel. Others will be transferred based on current routing policy of the security gateway at GRE client peer.  If you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a default gateway setting for the GRE client peer, all packets, including the Internet accessing of GRE client peer, will go through the established GRE tunnel. That means the remote GRE server peer controls the flow of any packets from the GRE client peer. Certainly, those packets come through the GRE tunnel.
<b>DMVPN Spoke</b>	Unchecked by default	Specify whether the gateway will support DMVPN Spoke for this GRE tunnel. Check Enable box to enable DMVPN Spoke.
<b>IPSec Pre-shared Key</b>	A Must fill setting	Enter a DMVPN spoke authentication Pre-shared Key (8~32 characters). Note: Pre-shared Key is available only when DMVPN Spoke is enabled.
<b>IPSec NAT Traversal</b>	Unchecked by default	Check <b>Enable</b> box to enable NAT-Traversal. Note: IPSec NAT Traversal will not be available when DMVPN is not enabled.
<b>IPSec Encapsulation Mode</b>	Unchecked by default	Specify IPSec Encapsulation Mode from the dropdown box. There are <b>Transport mode</b> and <b>Tunnel mode</b> supported. Note: IPSec Encapsulation Mode will not be available when DMVPN is not enabled.
<b>Tunnel</b>	Unchecked by default	Check <b>Enable</b> box to enable this GRE tunnel.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> button to cancel the settings.
<b>Back</b>	N/A	Click <b>Back</b> button to return to the previous page.

# M2M Cellular Gateway

## 5.2 Firewall

The firewall functions include Packet Filter, URL Blocking, Content Filter, MAC Control, Application Filter, IPS and some firewall options. The supported function can be different for the purchased gateway.

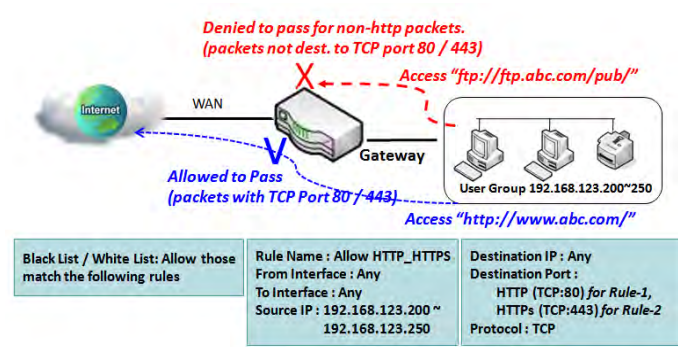

### 5.2.1 Packet Filter

Configuration [ Help ]												
Item		Setting										
▶ Packet Filters		<input checked="" type="checkbox"/> Enable										
▶ Black List / White List		<div>Deny those match the following rules. ▼</div>										
▶ Log Alert		<input type="checkbox"/> Log Alert										
Packet Filter List <div>AddDelete</div>												
ID	Rule Name	From Interface	To Interface	Source IP	Destination IP	Source MAC	Protocol	Source Port	Destination Port	Time Schedule	Enable	Actions

# M2M Cellular Gateway

"Packet Filter" function can let you define some filtering rules for incoming and outgoing packets. So the gateway can control what packets are allowed or blocked to pass through it. A packet filter rule should indicate from and to which interface the packet enters and leaves the gateway, the source and destination IP addresses, and destination service port type and port number. In addition, the time schedule to which the rule will be active.

## Packet Filter with White List Scenario

As shown in the diagram, specify "Packet Filter Rule List" as white list (*Allow those match the following rules*) and define the rules. Rule-1 is to allow HTTP packets to pass, and Rule-2 is to allow HTTPS packets to pass.

Under such configuration, the gateway will allow only HTTP and HTTPS packets, issued from the IP range 192.168.123.200 to 250, which are targeted to TCP port 80 or 443 to pass the WAN interface.

## Packet Filter Setting

Go to **Security > Firewall > Packet Filter** Tab.

The packet filter setting allows user to create and customize packet filter policies to allow or reject specific inbound/outbound packets through the router based on their office setting.

## Enable Packet Filter

Configuration [ Help ]	
Item	Setting
▶ Packet Filters	<input type="checkbox"/> Enable
▶ Black List / White List	Deny those match the following rules. ▼
▶ Log Alert	<input type="checkbox"/> Log Alert

Configuration Window		
Item Name	Value setting	Description
Packet Filter	The box is unchecked by	Check the <b>Enable</b> box to activate Packet Filter function

## M2M Cellular Gateway

	default	
Black List / White List	Deny those match the following rules is set by default	When <b><i>Deny those match the following rules</i></b> is selected, as the name suggest, packets specified in the rules will be blocked –black listed. In contrast, with <b><i>Allow those match the following rules</i></b> , you can specifically white list the packets to pass and the rest will be blocked.
Log Alert	The box is unchecked by default	Check the <b>Enable</b> box to activate Event Log.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

### Create/Edit Packet Filter Rules

The gateway allows you to customize your packet filtering rules. It supports up to a maximum of 20 filter rule sets.

Packet Filter List <span>Add</span> <span>Delete</span>												
ID	Rule Name	From Interface	To Interface	Source IP	Destination IP	Source MAC	Protocol	Source Port	Destination Port	Time Schedule	Enable	Actions

When **Add** button is applied, **Packet Filter Rule Configuration** screen will appear.

Back	N/A	When the <b>Back</b> button is clicked the screen will return to the Packet Filter Configuration page.

# M2M Cellular Gateway

## 5.2.2 URL Blocking

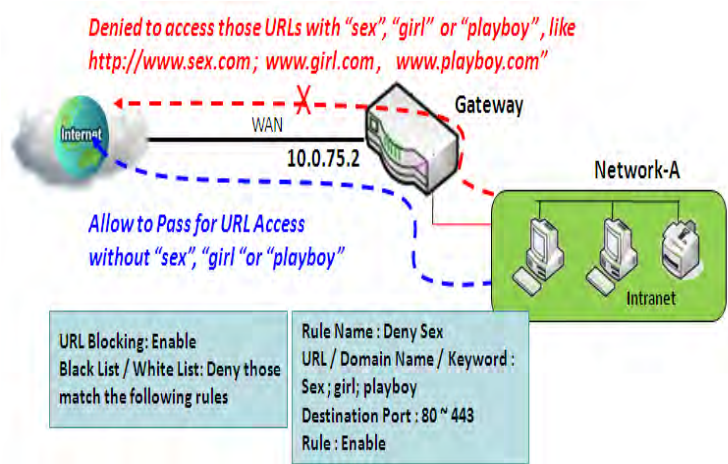

"URL Blocking" function can let you define blocking or allowing rules for incoming and outgoing Web request packets. With defined rules, gateway can control the Web requests containing the complete URL, partial domain name, or pre-defined keywords. For example, one can filter out or allow only the Web requests based on domain input suffixes like .com or .org or keywords like "bct" or "mpe".

An URL blocking rule should specify the URL, partial domain name, or included keywords in the Web requests from and to the gateway and also the destination service port. Besides, a certain time schedule can be applied to activate the URL Blocking rules during pre-defined time interval(s).

The gateway will logs and displays the disallowed web accessing requests that matched the defined URL blocking rule in the black-list or in the exclusion of the white-list.

When you choose "Allow all to pass except those match the following rules" for the "URL Blocking Rule List", you are setting the defined URL blocking rules to belong to the black list. The packets, listed in the rule list, will be blocked if one pattern in the requests matches to one rule. Other Web requests can pass through the gateway. In contrast, when you choose "Deny all to pass except those match the following rules" for the "URL Blocking Rule List", you are setting the defined packet filtering rules to belong to the white list. The Web requests, listed in the rule, will be allowed if one pattern in the requests matches to one rule. Other Web requests will be blocked.

### URL Blocking Rule with Black List

When the administrator of the gateway wants to block the Web requests with some dedicated patterns, he can use the "URL Blocking" function to block specific Web requests by defining the black list as shown in above diagram. Certainly, when the administrator wants to allow only the Web requests with some dedicated patterns to go through the gateway, he can also use the "URL Blocking" function by defining the white list to meet the requirement.

As shown in the diagram, enable the URL blocking function and create the first rule to

deny the Web requests with "sex" or "sexygirl" patterns and the other to deny the Web requests with "playboy" pattern to go through the gateway. System will block the Web requests with "sex", "sexygirl" or "playboy" patterns to pass through the gateway.

# M2M Cellular Gateway

## URL Blocking Setting

Go to **Security > Firewall > URL Blocking** Tab.

In "URL Blocking" page, there are three configuration windows. They are the "Configuration" window, "URL Blocking Rule List" window, and "URL Blocking Rule Configuration" window.

The "Configuration" window can let you activate the URL blocking function and specify to black listing or to white listing the packets defined in the "URL Blocking Rule List" entry. In addition, log alerting can be enabled to record on-going events for any disallowed Web request packets. Refer to "System Status" in "6.1.1 System Related" section in this user manual for how to view recorded log.

The "URL Blocking Rule List" window lists all your defined URL blocking rule entry. And finally, the "URL Blocking Rule Configuration" window can let you define URL blocking rules. The parameters in a rule include the rule name, the Source IP or MAC, the URL/Domain Name/Keyword, the destination service ports, the integrated time schedule rule and the rule activation.

### Enable URL Blocking

Configuration [ Help ]	
Item	Setting
▶ URL Blocking	<input type="checkbox"/> Enable
▶ Black List / White List	Deny those match the following rules. ▼

Schedule Rule		Definition > Scheduling > Configuration tab.
Rule	The box is unchecked by default.	Click the <b>Enable</b> box to activate this rule.
Save	NA	Click the <b>Save</b> button to save the settings.
Undo	NA	Click the <b>Undo</b> button to cancel the changes.
Back	NA	Click the <b>Back</b> button to return to the URL Blocking Configuration page.

# M2M Cellular Gateway

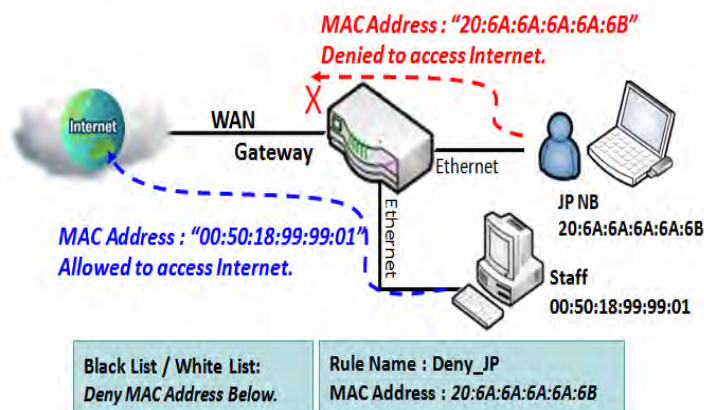

## 5.2.3 MAC Control

Configuration [ Help ]	
Item	Setting
▶ MAC Control	<input checked="" type="checkbox"/> Enable
▶ Black List / White List	Deny MAC Address Below. ▼
▶ Log Alert	<input type="checkbox"/> Enable
▶ Known MAC from LAN PC List	192.168.1.100(James-P45V) ▼ <input type="button" value="Copy to"/>

MAC Control Rule List <input type="button" value="Add"/> <input type="button" value="Delete"/>					
ID	Rule Name	MAC Address	Time Schedule Rule	Enable	Actions

"MAC Control" function allows you to assign the accessibility to the gateway for different users based on device's MAC address. When the administrator wants to reject the traffics from some client hosts with specific MAC addresses, he can use the "MAC Control" function to reject with the black list configuration.

### MAC Control with Black List Scenario

As shown in the diagram, enable the MAC control function and specify the "MAC Control Rule List" is a black list, and configure one MAC control rule for the gateway to deny the connection request from the "JP NB" with its own MAC address 20:6A:6A:6A:6A:6B.

System will block the connecting from the "JP NB" to the gateway but allow others.

# M2M Cellular Gateway

## MAC Control Setting

Go to **Security > Firewall > MAC Control** Tab.

The MAC control setting allows user to create and customize MAC address policies to allow or reject packets with specific source MAC address.

### Enable MAC Control

## 5.2.6 IPS

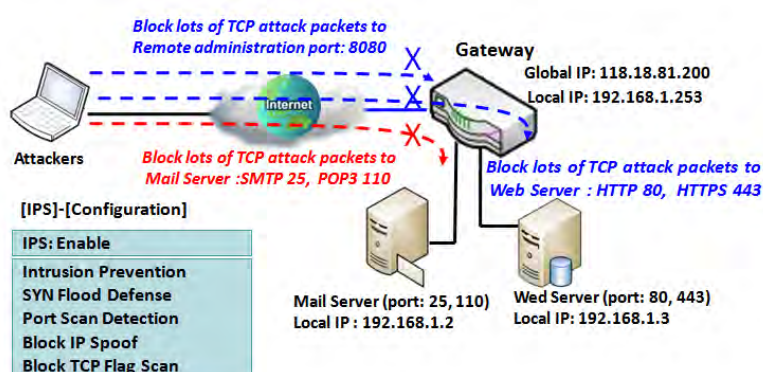

Configuration [ Help ]	
Item	Setting
▶ IPS	<input type="checkbox"/> Enable
▶ Log Alert	<input type="checkbox"/> Enable

Intrusion Prevention	
Item	Setting
▶ SYN Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ UDP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ ICMP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ Port Scan Detection	<input type="checkbox"/> Enable <input type="text" value="200"/> Packets/second (10~10000)

To provide application servers in the Internet, administrator may need to open specific ports for the services. However, there are some risks to always open service ports in the Internet. In order to avoid such attack risks, it is important to enable IPS functions.

Intrusion Prevention System (IPS) is network security appliances that monitor network and/or system activities for malicious activity. The main functions of IPS are to identify malicious activity, log information about this activity, attempt to block/stop it and report it. You can enable the IPS function and check the listed intrusion activities when needed. You can also enable the log alerting so that system will record Intrusion events when corresponding intrusions are detected.

### IPS Scenario

As shown in the diagram, the gateway serves as an E-mail server, Web Server and also provides TCP port 8080 for remote administration. So, remote users or unknown users can request those services from Internet. With IPS enabled, the gateway can detect incoming attack packets, including the TCP ports (25, 80, 110, 443 and 8080) with services. It will block the attack packets and let the normal access to pass through the gateway

# M2M Cellular Gateway

## IPS Setting

Go to **Security > Firewall > IPS** Tab.

The Intrusion Prevention System (IPS) setting allows user to customize intrusion prevention rules to prevent malicious packets.

### Enable IPS Firewall

Configuration <span>[ Help ]</span>	
Item	Setting
▶ IPS	<input type="checkbox"/> Enable
▶ Log Alert	<input type="checkbox"/> Enable

Configuration Window		
Item	Value setting	Description
IPS	The box is unchecked by default	Check the <b>Enable</b> box to activate IPS function
Log Alert	The box is unchecked by default	Check the <b>Enable</b> box to activate to activate Event Log.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

### Setup Intrusion Prevention Rules

The router allows you to select intrusion prevention rules you may want to enable. Ensure that the IPS is enabled before we can enable the defense function.

## M2M Cellular Gateway

Intrusion Prevention	
Item	Setting
▶ SYN Flood Defense	<input checked="" type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ UDP Flood Defense	<input checked="" type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ ICMP Flood Defense	<input checked="" type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)

## 5.2.7 Options

Firewall Options [ Help ]							
Item				Setting			
Stealth Mode				<input type="checkbox"/> Enable			
SPI				<input checked="" type="checkbox"/> Enable			
Discard Ping from WAN				<input type="checkbox"/> Enable			

Remote Administrator Host Definition							
ID	Interface	Protocol	IP	Subnet Mask	Service Port	Enable	Action
1	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
2	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
3	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
4	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
5	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit

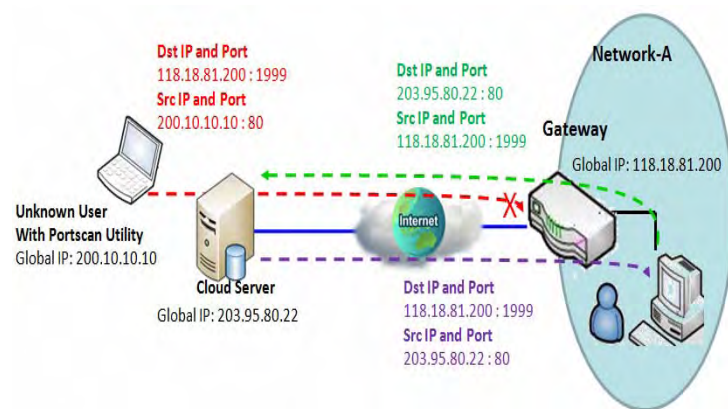

There are some additional useful firewall options in this page.

“Stealth Mode” lets gateway not to respond to port scans from the WAN so that makes it less susceptible to discovery and attacks on the Internet. “SPI” enables gateway to record the packet information like IP address, port address, ACK, SEQ number and so on while they pass through the gateway, and the gateway checks every incoming packet to detect if this packet is valid.

“Discard Ping from WAN” makes any host on the WAN side can’t ping this gateway. And finally, “Remote Administrator Hosts” enables you to perform administration task from a remote host. If this feature is enabled, only specified IP address(es) can perform remote administration.

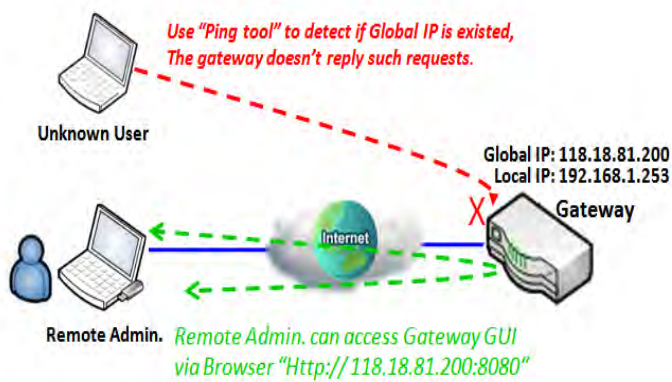

## M2M Cellular Gateway

## Enable SPI Scenario

As shown in the diagram, Gateway has the IP address of 118.18.81.200 for WAN interface and 192.168.1.253 for LAN interface. It serves as a NAT gateway. Users in Network-A initiate to access cloud server through the gateway. Sometimes, unknown users will simulate the packets but use different source IP to masquerade. With the SPI feature been enabled at the gateway, it will block such packets from unknown users.

## Discard Ping from WAN & Remote Administrator Hosts Scenario

“Discard Ping from WAN” makes any host on the WAN side can’t ping this gateway reply any ICMP packets. Enable the Discard Ping from WAN function to prevent security leak when local users surf the internet.

Remote administrator knows the gateway's global IP, and he can access the Gateway GUI via TCP port 8080.

## Firewall Options Setting

Go to **Security > Firewall > Options** Tab.

The firewall options setting allows network administrator to modify the behavior of the firewall and to enable Remote Router Access Control.

## Enable Firewall Options

## M2M Cellular Gateway

Firewall Options <span>[ Help ]</span>	
Item	Setting
Stealth Mode	<input type="checkbox"/> Enable
SPI	<input checked="" type="checkbox"/> Enable
Discard Ping from WAN	<input type="checkbox"/> Enable

Firewall Options		
Item	Value setting	Description
<b>Stealth Mode</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Stealth Mode function
<b>SPI</b>	The box is checked by default	Check the <b>Enable</b> box to activate the SPI function
<b>Discard Ping from WAN</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Discard Ping from WAN function

### Define Remote Administrator Host

The router allows network administrator to manage router remotely. The network administrator can assign specific IP address and service port to allow accessing the router.

Remote Administrator Host Definition							
ID	Interface	Protocol	IP	Subnet Mask	Service Port	Enable	Action
1	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
2	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
3	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
4	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
5	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit

Remote Administrator Host Definition		
Item	Value setting	Description
<b>Protocol</b>	HTTP is set by default	Select <b>HTTP</b> or <b>HTTPS</b> method for router access.
<b>IP</b>	A Must filled setting	This field is to specify the remote host to assign access right for remote access. Select <b>Any IP</b> to allow any remote hosts Select <b>Specific IP</b> to allow the remote host coming from a specific subnet. An IP address entered in this field and a selected <b>Subnet Mask</b> to compose the subnet.

## M2M Cellular Gateway

---

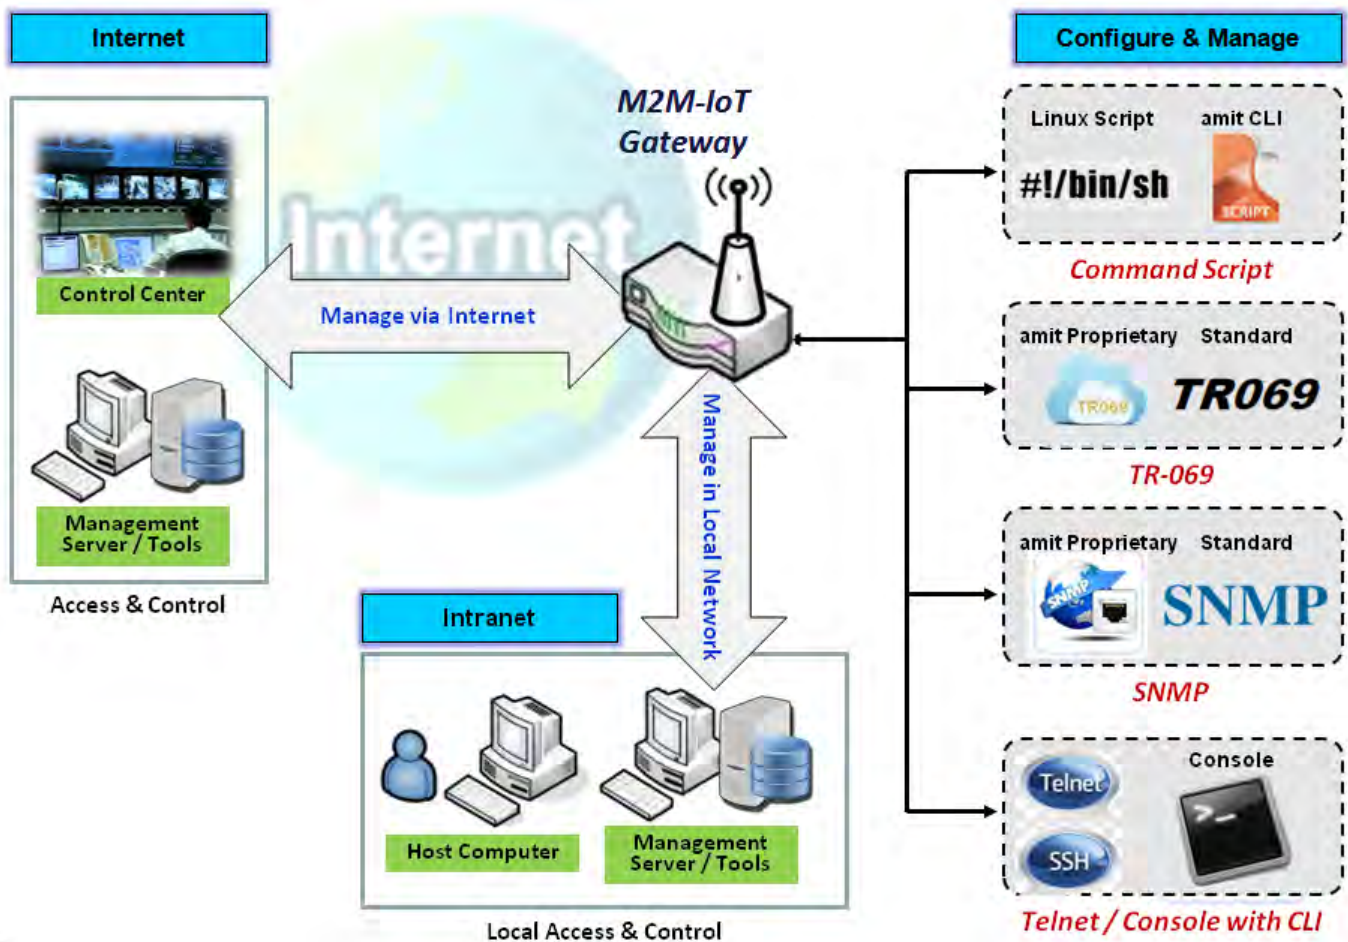

<b>Service Port</b>	1. 80 for HTTP by default 2. 443 for HTTPS by default	This field is to specify a Service Port to HTTP or HTTPS connection. <b><u>Value Range:</u></b> 1 ~ 65535.
<b>Enabling the rule</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this rule.
<b>Save</b>	N/A	Click <b>Enable</b> box to activate this rule then save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

# M2M Cellular Gateway

## Chapter 6 Administration

### 6.1 Configure & Manage

Configure & Manage refers to enterprise-wide administration of distributed systems including (and commonly in practice) computer systems. Centralized management has a time and effort trade-off that is related to the size of the company, the expertise of the IT staff, and the amount of technology being used. This device supports many system management protocols, such as Command Script, TR-069, SNMP, and Telnet with CLI. You can setup those configurations in the "Configure & Manage" section.

# M2M Cellular Gateway

## 6.1.1 Command Script

Command script configuration is the application that allows administrator to setup the pre-defined configuration in plain text style and apply configuration on startup.

Go to **Administration > Command Script > Configuration Tab**.

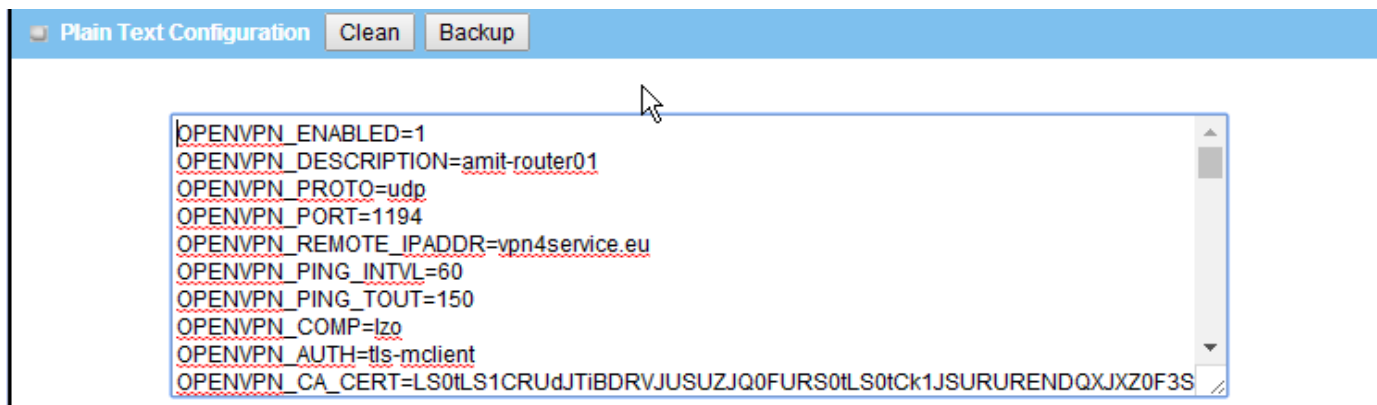

### Enable Command Script Configuration

Configuration	
Item	Setting
Configuration	<input type="checkbox"/> Enable
Backup Script	Via Web UI
Upload Script	Via Web UI
Script Name	<input type="text"/>
Version	<input type="text"/>
Description	<div><div></div></div>
Update time	

Configuration Item	Value setting	Description
Configuration	The box is unchecked by default	Check the <b>Enable</b> box to activate the Command Script function.
Backup Script	N/A	Click the <b>Via Web UI</b> or <b>Via Storage</b> button to backup the existed command script in a .txt file. You can specify the script file name in <b>Script Name</b> below.
Upload Script	N/A	Click the <b>Via Web UI</b> or <b>Via Storage</b> button to Upload the existed command script from a specified .txt file.
Script Name	1.An Optional setting 2.Any valid file name	Specify a script file name for script backup, or display the selected upload script file name. <b>Value Range:</b> 0 ~ 32 characters.
Version	1.An Optional setting 2.Any string	Specify the version number for the applied Command script. <b>Value Range:</b> 0 ~ 32 characters.
Description	1.An Optional setting 2.Any string	Enter a short description for the applied Command script.
Update time	N/A	It records the upload time for last commad script upload.

# M2M Cellular Gateway

## Edit/Backup Plain Text Command Script

You can edit the plain text configuration settings in the configuration screen as above.

Plain Text Configuration		
Item	Value setting	Description
Clean	NA	Clean text area. (You should click <b>Save</b> button to further clean the configuration already saved in the system.)
Backup	NA	Backup and download configuration.
Save	NA	Save configuration

The supported plain text configuration items are shown in the following list. For the settings that can be executed with standard Linux commands, you can put them in a script file, and apply to the system configure with **STARTUP** command. For those configurations without corresponding Linux command set to configure, you can configure them with proprietary command set.

Configuration Content		
Key	Value setting	Description
OPENVPN_ENABLED	1 : enable 0 : disable	Enable or disable OpenVPN Client function.
OPENVPN_DESCRIPTION	A Must filled Setting	Specify the tunnel name for the OpenVPN Client connection.
OPENVPN_PROTO	udp tcp	Define the <b>Protocol</b> for the OpenVPN Client. <ul style="list-style-type: none"><li>• Select <b>TCP</b> or <b>TCP /UDP</b> -&gt;The OpenVPN will use TCP protocol, and <b>Port</b> will be set as 443 automatically.</li><li>• Select <b>UDP</b> -&gt; The OpenVPN will use UDP protocol, and <b>Port</b> will be set as 1194 automatically.</li></ul>
OPENVPN_PORT	A Must filled Setting	Specify the <b>Port</b> for the OpenVPN Client to use.
OPENVPN_REMOTE_IPADDR	IP or FQDN	Specify the <b>Remote IP/FQDN</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the IP address or FQDN.
OPENVPN_PING_INTVL	seconds	Specify the time interval for OpenVPN keep-alive checking.
OPENVPN_PING_TOUT	seconds	Specify the timeout value for OpenVPN Client keep-alive checking.
OPENVPN_COMP	Adaptive	Specify the <b>LZO Compression</b> algorithm for OpenVPN client.
OPENVPN_AUTH	Static Key/TLS	Specify the authorization mode for the OpenVPN tunnel.

## M2M Cellular Gateway

		<ul style="list-style-type: none"> <li>• <b>TLS</b> -&gt;The OpenVPN will use TLS authorization mode, and the following items <b>CA Cert.</b>, <b>Client Cert.</b> and <b>Client Key</b> need to specify as well.</li> </ul>
<b>OPENVPN_CA_CERT</b>	A Must filled Setting	Specify the Trusted CA certificate for the OpenVPN client. It will go through Base64 Conversion.
<b>OPENVPN_LOCAL_CERT</b>	A Must filled Setting	Specify the local certificate for OpenVPN client. It will go through Base64 Conversion.
<b>OPENVPN_LOCAL_KEY</b>	A Must filled Setting	Specify the local key for the OpenVPN client. It will go through Base64 Conversion.
<b>OPENVPN_EXTRA_OPTS</b>	Options	Specify the extra options setting for the OpenVPN client.
<b>IP_ADDR1</b>	Ip	Ethernet LAN IP
<b>IP_NETM1</b>	Net mask	Ethernet LAN MASK
<b>PPP_MONITORING</b>	1 : enable 0 : disable	When the Network Monitoring feature is enabled, the router will use DNS Query or ICMP to periodically check Internet connection – connected or disconnected.
<b>PPP_PING</b>	0 : DNS Query 1 : ICMP Query	With <b>DNS Query</b> , the system checks the connection by sending DNS Query packets to the destination specified in PPP_PING_IPADDR. With <b>ICMP Query</b> , the system will check connection by sending ICMP request packets to the destination specified in PPP_PING_IPADDR.
<b>PPP_PING_IPADDR</b>	IP	Specify an IP address as the target for sending DNS query/ICMP request.
<b>PPP_PING_INTVL</b>	seconds	Specify the time interval for between two DNS Query or ICMP checking packets.
<b>STARTUP</b>	Script file	For the configurations that can be configured with standard Linux commands, you can put them in a script file, and apply the script file with STARTUP command. For example, STARTUP=#!/bin/sh STARTUP=echo "startup done" > /tmp/demo

### Plain Text System Configuration with Telnet

In addition to the web-style plain text configuration as mentioned above, the gateway system also allow the configuration via Telnet CLI. Administrator can use the proprietary telnet command “**txtConfig**” and related action items to perform the plain system configuration.

The command format is: `txtConfig (action) [option]`

Action	Option	Description
<b>clone</b>	<i>Output file</i>	Duplicate the configuration content from database and stored as a configuration file. (ex: <code>txtConfig clone /tmp/config</code> ) The contents in the configuration file are the same as the plain text commands mentioned above. This action is exactly the same as performing the “Backup” plain text configuration.
<b>commit</b>	a existing file	Commit the configuration content to database. (ex: <code>txtConfig commit /tmp/config</code> )
<b>enable</b>	NA	Enable plain text system config.

## M2M Cellular Gateway

---

		(ex: <i>txtConfig enable</i> )
<b>disable</b>	NA	Disable plain text system config. (ex: <i>txtConfig disable</i> )
<b>run_immediately</b>	NA	Apply the configuration content that has been committed in database. (ex: <i>txtConfig run_immediately</i> )
<b>run_immediately</b>	a existing file	Assign a configuration file to apply. (ex: <i>txtConfig run_immediately /tmp/config</i> )

# M2M Cellular Gateway

## 6.1.2 TR-069

TR-069 (Technical Report 069) is a Broadband Forum technical specification entitled CPE WAN Management Protocol (CWMP). It defines an application layer protocol for remote management of end-user devices, like this gateway device. As a bidirectional SOAP/HTTP-based protocol, it provides the communication between customer-premises equipment (CPE) and Auto Configuration Servers (ACS). The Security Gateway is such CPE.

TR-069 is a customized feature for ISP. It is not recommend that you change the configuration for this. If you have any problem in using this feature for device management, please contact with your ISP or the ACS provider for help. At the right upper corner of TR-069 Setting screen, one “[Help]” command let you see the same message about that.

Scenario - Managing deployed gateways through an ACS Server

### Scenario Application Timing

When the enterprise data center wants to use an ACS server to manage remote gateways geographically distributed elsewhere in the world, the gateways in all branch offices must have an embedded TR-069 agent to communicate with the ACS server. So that the ACS server can configure, FW upgrade and monitor these gateways and their corresponding Intranets.

### Scenario Description

The ACS server can configure, upgrade with latest FW and monitor these gateways.

Remote gateways inquire the ACS server for jobs to do in each time period.

The ACS server can ask the gateways to execute some urgent jobs.

### Parameter Setup Example

## M2M Cellular Gateway

---

Following tables list the parameter configuration as an example for the Gateway 1 in above diagram with "TR-069" enabling.

Use default value for those parameters that are not mentioned in the tables.

Configuration Path	[TR-069]-[Configuration]
TR-069	■ <i>Enable</i>
ACS URL	<i>http://qa.acslite.com/cpe.php</i>
ACS User Name	<i>ACSUserName</i>
ACS Password	<i>ACSPassword</i>
ConnectionRequest Port	<i>8099</i>
ConnectionRequest User Name	<i>ConnReqUserName</i>
ConnectionRequest Password	<i>ConnReqPassword</i>
Inform	■ <i>Enable Interval 900</i>

### Scenario Operation Procedure

In above diagram, the ACS server can manage multiple gateways in the Internet. The "Gateway 1" is one of them and has 118.18.81.33 IP address for its WAN-1 interface.

When all remote gateways have booted up, they will try to connect to the ACS server.

Once the connections are established successfully, the ACS server can configure, upgrade with latest FW and monitor these gateways.

Remote gateways inquire the ACS server for jobs to do in each time period.

If the ACS server needs some urgent jobs to be done by the gateways, it will issue the "Connection Request" command to those gateways. And those gateways make immediate connections in response to the ACS server's immediate connection request for executing the urgent jobs.

# M2M Cellular Gateway

## TR-069 Setting

Go to **Administration > Configure & Manage > TR-069** tab.

In "TR-069" page, there is only one configuration window for TR-069 function. In the window, you must specify the related information for your security gateway to connect to the ACS. Drive the function to work by specifying the URL of the ACS server, the account information to login the ACS server, the service port and the account information for connection requesting from the ACS server, and the time interval for job inquiry. Except the inquiry time, there are no activities between the ACS server and the gateways until the next inquiry cycle. But if the ACS server has new jobs that are expected to do by the gateways urgently, it will ask these gateways by using connection request related information for immediate connection for inquiring jobs and executing.

### Enable TR-069

Configuration <span>[ Help ]</span>	
Item	Setting
▶ TR-069	<input type="checkbox"/> Enable
▶ Interface	WAN-1 ▼
▶ Data model	ACS Cloud Data Model ▼
▶ ACS URL	<input type="text"/>

<b>Keep Alive Period</b>	1. An optional setting 2. <b>0</b> is set by default	Specify the keep alive time period for the connection with STUN Server. <u>Value Range:</u> 0 ~ 65535.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the modifications.

# M2M Cellular Gateway

## 6.1.3 SNMP

In brief, SNMP, the Simple Network Management Protocol, is a protocol designed to give a user the capability to remotely manage a computer network by polling and setting terminal values and monitoring network events.

In typical SNMP uses, one or more administrative computers, called managers, have the task of monitoring or managing a group of hosts or devices on a computer network. Each managed system executes, at all times, a software component called an agent which reports information via SNMP to the manager.

SNMP agents expose management data on the managed systems as variables. The protocol also permits active management tasks, such as modifying and applying a new configuration through remote modification of these variables. The variables accessible via SNMP are organized in hierarchies. These hierarchies, and other metadata (such as type and description of the variable), are described by Management Information Bases (MIBs).

The device supports several public MIBs and one private MIB for the SNMP agent. The supported MIBs are as follow: MIB-II (RFC 1213, Include IPv6), IF-MIB, IP-MIB, TCP-MIB, UDP-MIB, SMIv1 and SMIv2, SNMPv2-TM and SNMPv2-MIB, and AMIB (a Proprietary MIB)

### SNMP Management Scenario

#### Scenario Application Timing

There are two application scenarios of SNMP Network Management Systems (NMS). Local NMS is in

## M2M Cellular Gateway

the Intranet and manage all devices that support SNMP protocol in the Intranet. Another one is the Remote NMS to manage some devices whose WAN interfaces are connected together by using a switch or a router with UDP forwarding. If you want to manage some devices and they all have supported SNMP protocol, use either one application scenario, especially the management of devices in the Intranet. In managing devices in the Internet, the TR-069 is the better solution. Please refer to last sub-section.

### Scenario Description

The NMS server can monitor and configure the managed devices by using SNMP protocol, and those devices are located at where UDP packets can reach from NMS.

The managed devices report urgent trap events to the NMS servers.

Use SNMPv3 version of protocol can protected the transmitting of SNMP commands and responses.

The remote NMS with privilege IP address can manage the devices, but other remote NMS can't.

### Parameter Setup Example

Following tables list the parameter configuration as an example for the Gateway 1 in above diagram with "SNMP" enabling at LAN and WAN interfaces.

Use default value for those parameters that are not mentioned in the tables.

Configuration Path	[SNMP]-[Configuration]
SNMP Enable	■ LAN ■ WAN
Supported Versions	■ v1 ■ v2c ■ v3
Get / Set Community	ReadCommunity / WriteCommunity
Trap Event Receiver 1	118.18.81.11
WAN Access IP Address	118.18.81.11

Configuration Path	[SNMP]-[User Privacy Definition]		
ID	1	2	3
User Name	UserName1	UserName2	UserName3
Password	Password1	Password2	Disable
Authentication	MD5	SHA-1	Disable
Encryption	DES	Disable	Disable
Privacy Mode	authPriv	authNoPriv	noAuthNoPriv
Privacy Key	12345678	Disable	Disable
Authority	Read/Write	Read	Read
Enable	■ Enable	■ Enable	■ Enable

### Scenario Operation Procedure

In above diagram, the NMS server can manage multiple devices in the Intranet or a UDP-reachable network. The "Gateway 1" is one of the managed devices, and it has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. It serves as a NAT router.

## M2M Cellular Gateway

---

At first stage, the NMS manager prepares related information for all managed devices and records them in the NMS system. Then NMS system gets the status of all managed devices by using SNMP get commands.

When the manager wants to configure the managed devices, the NMS system allows him to do that by using SNMP set commands. The "UserName1" account is used if the manager uses SNMPv3 protocol for configuring the "Gateway 1". Only the "UserName1" account can let the "Gateway 1" accept the configuration from the NMS since the authority of the account is "Read/Write".

Once a managed device has an urgent event to send, the device will issue a trap to the Trap Event Receivers. The NMS itself could be one among them.

If you want to secure the transmitted SNMP commands and responses between the NMS and the managed devices, use SNMPv3 version of protocol.

The remote NMS without privilege IP address can't manage the "Gateway 1", since "Gateway 1" allows only the NMS with privilege IP address can manage it via its WAN interface.

# M2M Cellular Gateway

## SNMP Setting

Go to **Administration > Configure & Manage > SNMP** tab.

The SNMP allows user to configure SNMP relevant setting which includes interface, version, access control and trap receiver.

### Enable SNMP

Configuration	
Item	Setting
▶ SNMP Enable	<input type="checkbox"/> LAN <input type="checkbox"/> WAN
▶ WAN Interface	All WANs ▼
▶ Supported Versions	<input type="checkbox"/> v1 <input type="checkbox"/> v2c <input type="checkbox"/> v3
▶ Remote Access IP	Specific IP Address ▼ <input type="text"/> (IP Address/FQDN)
▶ SNMP Port	161 <input type="text"/>

SNMP Item	Value setting	Description
SNMP Enable	1.The boxes are unchecked by default	Select the interface for the SNMP and enable SNMP functions. When Check the <b>LAN</b> box, it will activate SNMP functions and you can access SNMP from LAN side; When Check the <b>WAN</b> box, it will activate SNMP functions and you can access SNMP from WAN side.
WAN Interface	1.A Must filled setting 2. <b>ALL WANs is selected by default</b>	Specify the WAN interface that a remote SNMP host can access to the device. By default, <b>All WANs</b> is selected, and there is no limitation for the WAN interface.
Supported Versions	1.A Must filled setting 2.The boxes are unchecked by default	Select the version for the SNMP When Check the <b>v1</b> box. It means you can access SNMP by version 1. When Check the <b>v2c</b> box. It means you can access SNMP by version 2c. When Check the <b>v3</b> box. It means you can access SNMP by version 3.
Remote Access IP	1. String format: any IPv4 address 2. It is an optional item.	Specify the <b>Remote Access IP</b> for WAN. Select <b>Specific IP Address</b> , and fill in a certain IP address. It means only this IP address can access SNMP from LAN/WAN side. Select <b>IP Range</b> , and fill in a range of IP addresses. It means the IP address within specified range can access SNMP from LAN/WAN side.  If you left it as blank, it means any IP address can access SNMP from WAN side.

## M2M Cellular Gateway

<b>SNMP Port</b>	1. String format: any port number 2. The default SNMP port is <b>161</b> . 3. A Must filled setting	Specify the <b>SNMP Port</b> . You can fill in any port number. But you must ensure the port number is not to be used. <u>Value Range: 1 ~ 65535.</u>
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

### Create/Edit Multiple Community

The SNMP allows you to custom your access control for version 1 and version 2 user. The router supports up to a maximum of 10 community sets.

Multiple Community List <span>Add</span> <span>Delete</span>			
ID	Community	Enable	Actions

When **Add** button is applied, **Multiple Community Rule Configuration** screen will appear.

Multiple Community Rule Configuration	
Item	Setting
Community	<div>Read Only ▾</div> <div></div>
Enable	<input checked="" type="checkbox"/> Enable
<div> <span>Save</span> <span>Undo</span> <span>Back</span> </div>	

Multiple Community Rule Configuration		
Item	Value setting	Description
<b>Community</b>	1. Read Only is selected by default 2. A Must filled setting 3. String format: any text	Specify this version 1 or version v2c user's community that will be allowed Read Only (GET and GETNEXT) or Read-Write (GET, GETNEXT and SET) access respectively. The maximum length of the community is 32.
<b>Enable</b>	1.The box is checked by default	Click Enable to enable this version 1 or version v2c user.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration. But it does not apply to SNMP functions. When you return to the SNMP main page. It will show "Click on save button to apply your changes" remind user to click main page Save button.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings.
<b>Back</b>	N/A	Click the <b>Back</b> button to return to last page.

# M2M Cellular Gateway

## Create/Edit User Privacy

The SNMP allows you to custom your access control for version 3 user. The router supports up to a maximum of 128 User Privacy sets.

User Privacy List <span>Add</span> <span>Delete</span>										
ID	User Name	Password	Authentication	Encryption	Privacy Mode	Privacy Key	Authority	OID Filter Prefix	Enable	Actions

When **Add** button is applied, **User Privacy Rule Configuration** screen will appear.

User Privacy Rule Configuration	
Item	Setting
User Name	<input type="text"/>
Password	<input type="password"/>
Authentication	<span>None ▾</span>
Encryption	<span>None ▾</span>
Privacy Mode	<span>noAuthNoPriv ▾</span>
Privacy Key	<input type="password"/>
Authority	<span>Read ▾</span>
OID Filter Prefix	<input type="text" value="1"/>
Enable	<input checked="" type="checkbox"/> Enable

User Privacy Rule Configuration		
Item	Value setting	Description
User Name	1. A Must filled setting 2. String format: any text	Specify the <b>User Name</b> for this version 3 user. <b>Value Range:</b> 1 ~ 32 characters.
Password	1. String format: any text	When your <b>Privacy Mode</b> is <b>authNoPriv</b> or <b>authPriv</b> , you must specify the <b>Password</b> for this version 3 user. <b>Value Range:</b> 8 ~ 64 characters.
Authentication	1. <b>None</b> is selected by default	When your <b>Privacy Mode</b> is <b>authNoPriv</b> or <b>authPriv</b> , you must specify the <b>Authentication</b> types for this version 3 user. Selected the authentication types <b>MD5/ SHA-1</b> to use.
Encryption	1. <b>None</b> is selected by default	When your <b>Privacy Mode</b> is <b>authPriv</b> , you must specify the <b>Encryption</b> protocols for this version 3 user. Selected the encryption protocols <b>DES / AES</b> to use.

## M2M Cellular Gateway

<b>Privacy Mode</b>	1. <b>noAuthNoPriv</b> is selected by default	Specify the <b>Privacy Mode</b> for this version 3 user. Selected the <b>noAuthNoPriv</b> . You do not use any authentication types and encryption protocols. Selected the <b>authNoPriv</b> . You must specify the <b>Authentication</b> and <b>Password</b> . Selected the <b>authPriv</b> . You must specify the Authentication, Password, Encryption and Privacy Key.
<b>Privacy Key</b>	1. String format: any text	When your <b>Privacy Mode</b> is <b>authPriv</b> , you must specify the <b>Privacy Key</b> (8 ~ 64 characters) for this version 3 user.
<b>Authority</b>	1. <b>Read</b> is selected by default	Specify this version 3 user's <b>Authority</b> that will be allowed <b>Read Only</b> (GET and GETNEXT) or <b>Read-Write</b> (GET, GETNEXT and SET) access respectively.
<b>OID Filter Prefix</b>	1. The default value is 1 2. A Must filled setting 3. String format: any legal OID	The <b>OID Filter Prefix</b> restricts access for this version 3 user to the sub-tree rooted at the given OID. <b>Value Range: 1 ~ 2080768.</b>
<b>Enable</b>	1. The box is checked by default	Click <b>Enable</b> to enable this version 3 user.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration. But it does not apply to SNMP functions. When you return to the SNMP main page. It will show "Click on save button to apply your changes" remind user to click main page <b>Save</b> button.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings
<b>Back</b>	N/A	Click the <b>Back</b> button to return the last page.

## Create/Edit Trap Event Receiver

The SNMP allows you to custom your trap event receiver. The router supports up to a maximum of 4 Trap Event Receiver sets.

Trap Event Receiver List <span>Add</span> <span>Delete</span>												
ID	Server IP	Server Port	SNMP Version	Community Name	User Name	Password	Privacy Mode	Authentication	Encryption	Privacy Key	Enable	Actions

When **Add** button is applied, **Trap Event Receiver Rule Configuration** screen will appear. The default SNMP Version is v1. The configuration screen will provide the version 1 must filled items.

# M2M Cellular Gateway

Trap Event Receiver Rule Configuration

Item	Setting
▶ Server IP	<input type="text"/> (IP Address/FQDN)
▶ Server Port	<input type="text" value="162"/>
▶ SNMP Version	<input type="text" value="v1"/>
▶ Community Name	<input type="text"/>
▶ Enable	<input checked="" type="checkbox"/> Enable

When you selected v2c, the configuration screen is exactly the same as that of v1, except the version.

When you selected v3, the configuration screen will provide more setting items for the version 3 Trap.

Trap Event Receiver Rule Configuration

Item	Setting
▶ Server IP	<input type="text"/> (IP Address/FQDN)
▶ Server Port	<input type="text" value="162"/>
▶ SNMP Version	<input type="text" value="v3"/>
▶ Community Name	<input type="text"/>
▶ User Name	<input type="text"/>
▶ Password	<input type="password"/>
▶ Privacy Mode	<input type="text" value="noAuthNoPriv"/>
▶ Authentication	<input type="text" value="None"/>
▶ Encryption	<input type="text" value="None"/>
▶ Privacy Key	<input type="password"/>
▶ Enable	<input checked="" type="checkbox"/> Enable

Trap Event Receiver Rule Configuration		
Item	Value setting	Description
Server IP	1. A Must filled setting 2. String format: any IPv4 address or FQDN	Specify the trap <b>Server IP</b> or <b>FQDN</b> . The DUT will send trap to the server IP/FQDN.
Server Port	1. String format: any port number 2. The default SNMP trap port is 162 3. A Must filled setting	Specify the trap <b>Server Port</b> . You can fill in any port number. But you must ensure the port number is not to be used. <i>Value Range: 1 ~ 65535.</i>

## M2M Cellular Gateway

<b>SNMP Version</b>	1. <b>v1</b> is selected by default	<p>Select the version for the trap</p> <p>Selected the <b>v1</b>.</p> <p>The configuration screen will provide the version 1 must filled items.</p> <p>Selected the <b>v2c</b>.</p> <p>The configuration screen will provide the version 2c must filled items.</p> <p>Selected the <b>v3</b>.</p> <p>The configuration screen will provide the version 3 must filled items.</p>
<b>Community Name</b>	1. A <b>v1</b> and <b>v2c</b> Must filled setting 2. String format: any text	<p>Specify the <b>Community Name</b> for this version 1 or version v2c trap.</p> <p><b>Value Range:</b> 1 ~ 32 characters.</p>
<b>User Name</b>	1. A <b>v3</b> Must filled setting 2. String format: any text	<p>Specify the <b>User Name</b> for this version 3 trap.</p> <p><b>Value Range:</b> 1 ~ 32 characters.</p>
<b>Password</b>	1. A <b>v3</b> Must filled setting 2. String format: any text	<p>When your <b>Privacy Mode</b> is <b>authNoPriv</b> or <b>authPriv</b>, you must specify the <b>Password</b> for this version 3 trap.</p> <p><b>Value Range:</b> 8 ~ 64 characters.</p>
<b>Privacy Mode</b>	1. A <b>v3</b> Must filled setting 2. <b>noAuthNoPriv</b> is selected by default	<p>Specify the <b>Privacy Mode</b> for this version 3 trap.</p> <p>Selected the <b>noAuthNoPriv</b>.</p> <p>You do not use any authentication types and encryption protocols.</p> <p>Selected the <b>authNoPriv</b>.</p> <p>You must specify the <b>Authentication</b> and <b>Password</b>.</p> <p>Selected the <b>authPriv</b>.</p> <p>You must specify the Authentication, Password, Encryption and Privacy Key.</p>
<b>Authentication</b>	1. A <b>v3</b> Must filled setting 2. <b>None</b> is selected by default	<p>When your <b>Privacy Mode</b> is <b>authNoPriv</b> or <b>authPriv</b>, you must specify the <b>Authentication</b> types for this version 3 trap.</p> <p>Selected the authentication types <b>MD5/ SHA-1</b> to use.</p>
<b>Encryption</b>	1. A <b>v3</b> Must filled setting 2. <b>None</b> is selected by default	<p>When your <b>Privacy Mode</b> is <b>authPriv</b>, you must specify the <b>Encryption</b> protocols for this version 3 trap.</p> <p>Selected the encryption protocols <b>DES / AES</b> to use.</p>
<b>Privacy Key</b>	1. A <b>v3</b> Must filled setting 2. String format: any text	<p>When your <b>Privacy Mode</b> is <b>authPriv</b>, you must specify the <b>Privacy Key</b> (8 ~ 64 characters) for this version 3 trap.</p>
<b>Enable</b>	1. The box is checked by default	Click <b>Enable</b> to enable this trap receiver.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration. But it does not apply to SNMP functions. When you return to the SNMP main page. It will show "Click on save button to apply your changes" remind user to click main page <b>Save</b> button.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings.
<b>Back</b>	N/A	Click the <b>Back</b> button to return the last page.

# M2M Cellular Gateway

## Specify SNMP MIB-2 System

If required, you can also specify the required onformation the the MIB-2 System.

SNMP MIB-2 System		
Item	Setting	
▶ sysContact	<input type="text"/>	
▶ sysLocation	<input type="text"/>	

SNMP MIB-2 System Configuration		
Item	Value setting	Description
sysContact	1. An Optional filled setting 2. String format: any text	Specify the contact information forMIB-2 system. <b><u>Value Range:</u></b> 0 ~ 64 characters.
sysLocation	1. An Optional filled setting 2. String format: any text	Specify the location information forMIB-2 system. <b><u>Value Range:</u></b> 0 ~ 64 characters.

## Edit SNMP Options

If you use some particular private MIB, you must fill the enterprise name, number and OID.

Options		
Item	Setting	
▶ Enterprise Name	<input type="text" value="AMIT"/>	
▶ Enterprise Number	<input type="text" value="12823"/>	
▶ Enterprise OID	1.3.6.1.4.1.	<input type="text" value="12823.4.4.9"/>

Options		
Item	Setting	
▶ Enterprise Name	<input type="text" value="Default"/>	
▶ Enterprise Number	<input type="text" value="12823"/>	
▶ Enterprise OID	1.3.6.1.4.1.	<input type="text" value="12823.4.4.9"/>

Options

## M2M Cellular Gateway

Item	Value setting	Description
<b>Enterprise Name</b>	1. The default value is <b>Default</b> 2. A Must filled setting 3. String format: any text	Specify the <b>Enterprise Name</b> for the particular private MIB. <u><b>Value Range:</b> 1 ~ 10 characters, and only string with A~Z, a~z, 0~9, '-', '_'.</u>
<b>Enterprise Number</b>	The default value is 12823 (Default Enterprise Number) 2. A Must filled setting 3. String format: any number	Specify the <b>Enterprise Number</b> for the particular private MIB. <u><b>Value Range:</b> 1 ~2080768.</u>
<b>Enterprise OID</b>	1. The default value is 1.3.6.1.4.1.12823.4.4.9 (Default Enterprise OID) 2. A Must filled setting 3. String format: any legal OID	Specify the <b>Enterprise OID</b> for the particular private MIB. The range of the each OID number is 1-2080768. The maximum length of the enterprise OID is 31. The seventh number must be identical with the enterprise number.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration and apply your changes to SNMP functions.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings.

# M2M Cellular Gateway

## 6.1.4 Telnet & SSH

A command-line interface (CLI), also known as command-line user interface, and console user interface are means of interacting with a computer program where the user (or client) issues commands to the program in the form of successive lines of text (command lines). The interface is usually implemented with a command line shell, which is a program that accepts commands as text input and converts commands to appropriate operating system functions. Programs with command-line interfaces are generally easier to automate via scripting. The device supports both Telnet and SSH (Secure Shell) CLI with default service port 23 and 22, respectively.

### Telnet & SSH Scenario

#### Scenario Application Timing

When the administrator of the gateway wants to manage it from remote site in the Intranet or Internet, he may use "Telnet with CLI" function to do that by using "Telnet" or "SSH" utility.

#### Scenario Description

The Local Admin or the Remote Admin can manage the Gateway by using "Telnet" or "SSH" utility with privileged user name and password.

The data packets between the Local Admin and the Gateway or between the Remote Admin and the Gateway can be plain texts or encrypted texts. Suggest they are plain texts in the Intranet for Local Admin to use "Telnet" utility, and encrypted texts in the Internet for Remote Admin to use "SSH" utility.

## M2M Cellular Gateway

---

### Parameter Setup Example

Following table lists the parameter configuration as an example for the Gateway in above diagram with "Telnet with CLI" enabling at LAN and WAN interfaces.

Use default value for those parameters that are not mentioned in the table.

Configuration Path	[Telnet & SSH]-[Configuration]
Telnet	LAN: <input checked="" type="checkbox"/> <b>Enable</b> WAN: <input type="checkbox"/> <b>Enable</b> Service Port: <b>23</b>
SSH	LAN: <input checked="" type="checkbox"/> <b>Enable</b> WAN: <input checked="" type="checkbox"/> <b>Enable</b> Service Port: <b>22</b>

### Scenario Operation Procedure

In above diagram, "Local Admin" or "Remote Admin" can manage the "Gateway" in the Intranet or Internet. The "Gateway" is the gateway of Network-A, and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. It serves as a NAT gateway.

The "Local Admin" in the Intranet uses "Telnet" utility with privileged account to login the Gateway.

Or the "Remote Admin" in the Internet uses "SSH" utility with privileged account to login the Gateway.

The administrator of the gateway can control the device as like he is in front of the gateway.

# M2M Cellular Gateway

## Telnet & SSH Setting

Go to **Administration > Configure & Manage > Telnet & SSH** tab.

The Telnet & SSH setting allows administrator to access this device through the traditional Telnet or SSH Telnet program. Before you can telnet (login) to the device, please configure the related settings and password with care. The password management part allows you to set root password for logging telnet and SSH.

Configuration		Save	Undo
Item	Setting		
▶ Telnet	LAN <input checked="" type="checkbox"/> Enable WAN <input type="checkbox"/> Enable Service Port <input type="text" value="23"/>		
▶ SSH	LAN <input checked="" type="checkbox"/> Enable WAN <input type="checkbox"/> Enable Service Port <input type="text" value="22"/>		

Configuration		
Item	Value setting	Description
Telnet	<ol style="list-style-type: none"><li>1. The LAN Enable box is checked by default.</li><li>2. By default <b>Service Port</b> is 23.</li></ol>	Check the <b>Enable</b> box to activate the Telnet function for connecting from LAN or WAN interfaces. You can set which number of <b>Service Port</b> you want to provide for the corresponding service. <b>Value Range:</b> 1 ~65535.
SSH	<ol style="list-style-type: none"><li>3. The LAN Enable box is checked by default.</li><li>4. By default <b>Service Port</b> is 22.</li></ol>	Check the <b>Enable</b> box to activate the SSH Telnet function for connecting from LAN or WAN interfaces. You can set which number of <b>Service Port</b> you want to provide for the corresponding service. <b>Value Range:</b> 1 ~65535.

## 6.2 System Operation

System Operation allows the network administrator to manage system, settings such as web-based utility access password change, system information, system time, system log, firmware/configuration backup & restore, and reset & reboot.

### 6.2.1 Password & MMI

Go to **Administration > System Operation > Password & MMI** tab.

#### Change UserName

Change Username screen allows network administrator to change the web-based MMI login account to access gateway. Click the **Modify** button and provide the new username setting.

Username

[ Help ]

Item	Setting
▶ Username	admin <div>Modify</div>
▶ New UserName	<input type="text"/>
▶ Password	<input type="password"/>

Username Configuration		
Item	Value setting	Description
Username	1. The default Username for web-based MMI is 'admin'.	Display the current MMI login account (Username).
New Username	String: any text	Enter new Username to replace the current setting.
Password	String: any text	Enter current password to verify if you have the permission to change the username setting.
Save	N/A	Click <b>Save</b> button to save the settings
Undo	N/A	Click <b>Undo</b> button to cancel the settings

#### Change Password

Change password screen allows network administrator to change the web-based MMI login password to access gateway.

# M2M Cellular Gateway

Password [ Help ]	
Item	Setting
▶ Old Password	<input type="text"/>
▶ New Password	<input type="text"/>
▶ New Password Confirmation	<input type="text"/>

Password Configuration		
Item	Value setting	Description
Old Password	1. String: any text 2. The default password for web-based MMI is 'admin'.	Enter the current password to enable you unlock to change password.
New Password	String: any text	Enter new password
New Password Confirmation	String: any text	Enter new password again to confirm
Save	N/A	Click <b>Save</b> button to save the settings
Undo	N/A	Click <b>Undo</b> button to cancel the settings

## Change MMI Setting for Accessing

This is the gateway's web-based MMI access which allows administrator to access the gateway for management. The gateway's web-based MMI will automatically logout when the idle time has elapsed. The setting allows administrator to enable automatic logout and set the logout idle time. When the login timeout is disabled, the system won't logout the administrator automatically.

MMI [ Help ]	
Item	Setting
▶ Login	Password-Guessing Attack & MAX: <input type="text" value="3"/> (times)
▶ Login Timeout	<input checked="" type="checkbox"/> Enable <input type="text" value="300"/> (seconds)
▶ GUI Access Protocol	<input type="text" value="http/https"/> ▼
▶ HTTPs Certificate Setup	<input checked="" type="radio"/> default <input type="radio"/> Select from Certificate List Certificate: <input type="text"/> Key: <input type="text" value="locatkey"/> ▼
▶ HTTP Compression	<input type="checkbox"/> gzip <input type="checkbox"/> deflate
▶ System Boot Mode	<input type="text" value="Normal Mode"/> ▼

# M2M Cellular Gateway

MMI Configuration Item	Value setting	Description
<b>Login</b>	3 times is set by default	<p>Enter the login trial counting value.</p> <p><b>Value Range:</b> 3 ~ 10.</p> <p>If someone tried to login the web GUI with incorrect password for more than the counting value, an warning message "<b>Already reaching maximum Password-Guessing times, please wait a few seconds!</b>" will be displayed and ignore the following login trials.</p>
<b>Login Timeout</b>	The Enable box is checked, and 300 is set by default.	<p>Check the Enable box to activate the auto logout function, and specify the maximum idle time as well.</p> <p><b>Value Range:</b> 30 ~ 65535.</p>
<b>GUI Access Protocol</b>	<b>http/https</b> is selected by default.	<p>Select the protocol that will be used for GUI access. It can be <b>http/https</b>, <b>http only</b>, or <b>https only</b>.</p>
<b>HTTPs Certificate Setup</b>	The <b>default</b> box is selected by default	<p>If the https Access Protocol is selected, the HTTPs Certificate Setup option will be available for further configuration.</p> <p>You can leave it as default or select a expected certificate and key from the drop down list.</p> <p>Refer to <b>Object Definition &gt; Certificate</b> Section for the Certificate configuration.</p>
<b>http Compression</b>	The box is unchecked by default.	<p>Check the box (<b>gzip</b>, or <b>deflate</b>) if any comprerssion method is preferred.</p>
<b>System Boot Mode</b>	<b>Normal Mode</b> is selected by default.	<p>Select the system boot mode that will be adopted to boot up the device.</p> <p><b>Normal Mode:</b> It takes longer boot up time, about 200 seconds, with complete firmware image check during the device booting.</p> <p><b>Fast Mode:</b> It takes shorter boot up time, about 120 seconds, without checking the firmwareimage during the device booting.</p> <p><b>Quick Mode:</b> It takes shorter boot up time, about 90 seconds, without checking the firmware image and create the internal database for User/Group/Captive Portal functions.</p> <p><b>Note:</b> Use <b>Quick Mode</b> with care, once selected, the User/Group/Captive Portal function will become non-functional.</p>
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> button to cancel the settings

# M2M Cellular Gateway

## 6.2.2 System Information

System Information screen gives network administrator a quick look up on the device information for the purchased gateway.

Go to **Administration > System Operation > System Information** tab.

System Information	
Item	Setting
▶ Model Name	
▶ Device Serial Number	
▶ Kernel Version	2.6.36
▶ FW Version	0000TE0.H81_e81.0000_08021800
▶ CPU Usage	9.80%
▶ Memory Usage	60%
▶ System Time	Mon, 07 Aug 2017 15:45:25 +0800
▶ Device Up-Time	4day 3hr 22min 24sec

System Information		
Item	Value Setting	Description
<b>Model Name</b>	N/A	It displays the model name of this product.
<b>Device Serial Number</b>	N/A	It displays the serial number of this product.
<b>Kernel Version</b>	N/A	It displays the Linux kernel version of the product
<b>FW Version</b>	N/A	It displays the firmware version of the product
<b>CPU Usage</b>	N/A	It displays the percentage of CPU utilization.
<b>Memory Usage</b>	N/A	It displays the percentage of device memory utilization.
<b>System Time</b>	N/A	It displays the current system time that you browsed this web page.
<b>Device Up-Time</b>	N/A	It displays the statistics for the device up-time since last boot up.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the system Information immediately.

# M2M Cellular Gateway

## 6.2.3 System Time

The gateway provides manually setup and auto-synchronized approaches for the administrator to setup the system time for the gateway.

Go to **Administration > System Operation > System Time** tab.

System Time Configuration	
Item	Setting
Time Zone	* Not yet configured! The default is GMT+00:00
Auto-synchronization	<input checked="" type="checkbox"/> Enable Time Server: <input type="text"/> Available Time Servers (RFC-868): Auto
Daylight Saving Time	<input type="checkbox"/> Enable
Set Date & Time Manually	2016 / December / 22 (Year/Month/Day) 15 : 32 : 01 (Hour:Minute:Second)

System Time Information		
Item	Value Setting	Description
Time Zone	1. It is an optional item. 2. GMT+00 :00 is selected by default.	Select a time zone where this device locates.
Auto-synchronization	1. Checked by default. 2. Auto is selected by default.	Check the <b>Enable</b> button to activate the time auto-synchronization function with a certain NTP server. You can enter the IP or FQDN for the NTP server you expected, or leave it as auto mode so that the available server will be used for time synchronization one by one.
Daylight Saving Time	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the daylight saving function. When you enabled this function, you have to specify the start date and end date for the daylight saving time duration.
Set Date & Time	1. It is an optional item.	If you do not enable the time auto-synchronization function, you can also manually set the date (Year/Month/Day) and time (Hour:Minute:Second).
Save	N/A	Click the <b>Save</b> button to save the settings.
Refresh	N/A	Click the <b>Refresh</b> button to update the system time immediately.

Instead of manually configuring the system time for the gateway, there are two simple and quick solutions for you to set the correct time information and set it as the system time for the gateway.

## M2M Cellular Gateway

---

The first one is “Sync with Timer Server”. Based on your selection of time zone and time server in above time information configuration window, system will communicate with time server by NTP Protocol to get system date and time after you click on the **Sync with Timer Server** button.

Note: Remember to select a correct time zone for the device, otherwise, you will just get the UTC (Coordinated Universal Time) time, not the local time for the device.

The second one is “Sync with my PC”. Click on the **Sync with my PC** button to let system synchronize its date and time to the time of the administration PC.

# M2M Cellular Gateway

## 6.2.4 System Log

System Log screen contains various event log tools facilitating network administrator to perform local event logging and remote reporting.

Go to **Administration > System Operation > System Log** tab.

System Log

View

Email Now

Item	Setting
Web Log Type Category	<input checked="" type="checkbox"/> System <input checked="" type="checkbox"/> Attacks <input checked="" type="checkbox"/> Drop <input checked="" type="checkbox"/> Login message <input type="checkbox"/> Debug

## Web Log Type Category

Web Log Type Category screen allows network administrator to select the type of events to log and be displayed in the Web Log List Window as described in the previous section. Click on the View button to view Log History in the Web Log List window.

## M2M Cellular Gateway

▶ Web Log Type Category	<input checked="" type="checkbox"/> System <input checked="" type="checkbox"/> Attacks <input checked="" type="checkbox"/> Drop <input checked="" type="checkbox"/> Login message <input type="checkbox"/> Debug
-------------------------	--

Web Log Type Category Setting Window		
Item	Value Setting	Description
System	Checked by default	Check to log system events and to display in the Web Log List window.
Attacks	Checked by default	Check to log attack events and to display in the Web Log List window.
Drop	Checked by default	Check to log packet drop events and to display in the Web Log List window.
Login message	Checked by default	Check to log system login events and to display in the Web Log List window.
Debug	Un-checked by default	Check to log debug events and to display in the Web Log List window.

### Email Alert

Email Alert screen allows network administrator to select the type of event to log and be sent to the destined Email account.

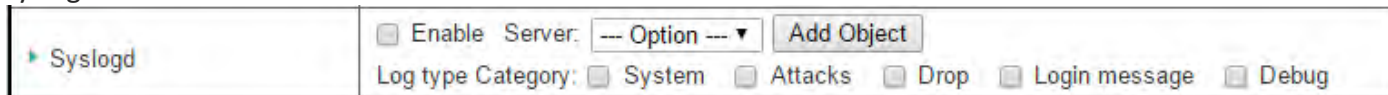

▶ Email Alert	<input type="checkbox"/> Enable
	Server: --- Option --- ▼ <input type="button" value="Add Object"/>
	E-mail Addresses: <input type="text"/>
	Subject: <input type="text"/>
	Log type Category: <input type="checkbox"/> System <input type="checkbox"/> Attacks <input type="checkbox"/> Drop <input type="checkbox"/> Login message <input type="checkbox"/> Debug

Email Alert Setting Window		
Item	Value Setting	Description
Enable	Un-checked by default	Check <b>Enable</b> box to enable sending event log messages to destined Email account defined in the E-mail Addresses blank space.
Server	N/A	Select one email server from the Server dropdown box to send Email. If none has been available, click the <b>Add Object</b> button to create an outgoing Email server. You may also add an outgoing Email server from Object Definition > External Server > External Server tab.
E-mail address	String : email format	Enter the recipient's Email address. Separate Email addresses with comma ',' or semicolon ';'.
Subject	String : any text	Enter the Email address in the format of 'myemail@domain.com'
Log type category	Default unchecked	Enter an Email subject that is easy for you to identify on the Email client. Select the type of events to log and be sent to the designated Email account. Available events are System, Attacks, Drop, Login message, and Debug.

## M2M Cellular Gateway

### Syslogd

Syslogd screen allows network administrator to select the type of event to log and be sent to the designated Syslog server.

Syslogd Setting Window		
Item	Value Setting	Description
Enable	Un-checked by default	Check Enable box to activate the Syslogd function, and send event logs to a syslog server
Server	N/A	Select one syslog server from the Server dropdown box to send event log to. If none has been available, click the <b>Add Object</b> button to create a system log server. You may also add an system log server from the Object Definition > External Server > External Server tab.
Log type category	Un-checked by default	Select the type of event to log and be sent to the destined syslog server. Available events are System, Attacks, Drop, Login message, and Debug.

### Log to Storage

Log to Storage screen allows network administrator to select the type of events to log and be stored at an internal or an external storage.

Log to Storage Setting Window		
Item	Value Setting	Description
Enable	Un-checked by default	Check to enable sending log to storage.
Select Device	Internal is selected by default	Select internal or external storage.
Log file name	Un-checked by default	Enter log file name to save logs in designated storage.
Split file Enable	Un-checked by default	Check <b>enable</b> box to split file whenever log file reaching the specified limit.
Split file Size	200 KB is set by default	Enter the file size limit for each split log file. <b>Value Range: 10 ~1000.</b>
Log type category	Un-checked by default	Check which type of logs to send: System, Attacks, Drop, Login message, Debug

Log to Storage Button Description		
Item	Value setting	Description
Download log file	N/A	Click the <b>Download log file</b> button to download log files to a log.tar file.

# M2M Cellular Gateway

## 6.2.5 Backup & Restore

In the Backup & Restore window, you can upgrade the device firmware when new firmware is available and also backup / restore the device configuration.

In addition to the factory default settings, you can also customize a special configuration setting as a customized default value. With this customized default value, you can reset the device to the expected default setting if needed.

Go to **Administration > System Operation > Backup & Restore** tab.

FW Backup & Restore	
Item	Setting
FW Upgrade	Via Web UI ▾ FW Upgrade
Backup Configuration Settings	Download ▾ Via Web UI
Auto Restore Configuration	<input type="checkbox"/> Enable Save Conf. Clean Conf. Conf. Info.
Self-defined Logo	Download ▾ Via Web UI

FW Backup & Restore		
Item	Value Setting	Description
FW Upgrade	Via Web UI is selected by default	If new firmware is available, click the <b>FW Upgrade</b> button to upgrade the device firmware <b>via Web UI</b> , or <b>Via Storage</b> . After clicking on the “FW Upgrade” command button, you need to specify the file name of new firmware by using “Browse” button, and then click “Upgrade” button to start the FW upgrading process on this device. If you want to upgrade a firmware which is from GPL policy, please check “Accept unofficial firmware”
Backup Configuration Settings	Download is selected by default	You can backup or restore the device configuration settings by clicking the <b>Via Web UI</b> button. <b>Download:</b> for backup the device configuration to a config.bin file. <b>Upload:</b> for restore a designated configuration file to the device. <b>Via Web UI:</b> to retrieve the configuration file via Web GUI.
Auto Restore Configuration	The Enable box is unchecked by default	Click the <b>Enable</b> button to activate the customized default setting function. Once the function is activated, you can save the expected setting as a customized default setting by clicking the <b>Save Conf.</b> button, or clicking the <b>Clean Conf.</b> button to erase the stored customized configuration.

# M2M Cellular Gateway

## 6.2.6 Reboot & Reset

For some special reason or situation, you may need to reboot the gateway or reset the device configuration to its default value. In addition to perform these operations through the Power ON/OFF, or pressing the reset button on the device panel, you can do it through the web GUI too.

Go to **Administration > System Operation > Reboot & Reset** tab.

In the Reboot & Reset window, you can reboot this device by clicking the “Reboot” button, and reset this device to default settings by clicking the “Reset” button.

System Operation	
Item	Setting
▶ Reboot	Now ▼ <input type="button" value="Reboot"/>
▶ Reset to Default	<input type="button" value="Reset"/>

System Operation Window		
Item	Value Setting	Description
Reboot	Now is selected by default	Click the <b>Reboot</b> button to reboot the gateway immediately or on a pre-defined time schedule. <b>Now:</b> Reboot immediately <b>Time Schedule:</b> Select a pre-defined auto-reboot time schedule rule to reboot the auto device on a designated tim. To define a time schedule rule, go to <b>Object Definition &gt; Scheduling &gt; Configuration</b> tab.
Reset to Default	N/A	Click the <b>Reset</b> button to reset the device configuration to its default value.

## M2M Cellular Gateway

### 6.3 FTP (not supported)

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## 6.4 Diagnostic

This gateway supports simple network diagnosis tools for the administrator to troubleshoot and find the root cause of the abnormal behavior or traffics passing through the gateway. There can be a Packet Analyzer to help record the packets for a designated interface or specific source/destination host, and another Ping and Tracert tools for testing the network connectivity issues.

### 6.4.1 Diagnostic Tools

The Diagnostic Tools provide some frequently used network connectivity diagnostic tools (approaches) for the network administrator to check the device connectivity.

Go to **Administration > Diagnostic > Diagnostic Tools** tab.

Diagnostic Tools	
Item	Setting
Ping Test	Host IP: <input type="text"/> Interface: <span>Auto</span> <span>Ping</span>
Tracert Test	Host IP: <input type="text"/> Interface: <span>Auto</span> <span>UDP</span> <span>Tracert</span>
Wake on LAN	<input type="text"/> <span>Wake up</span>

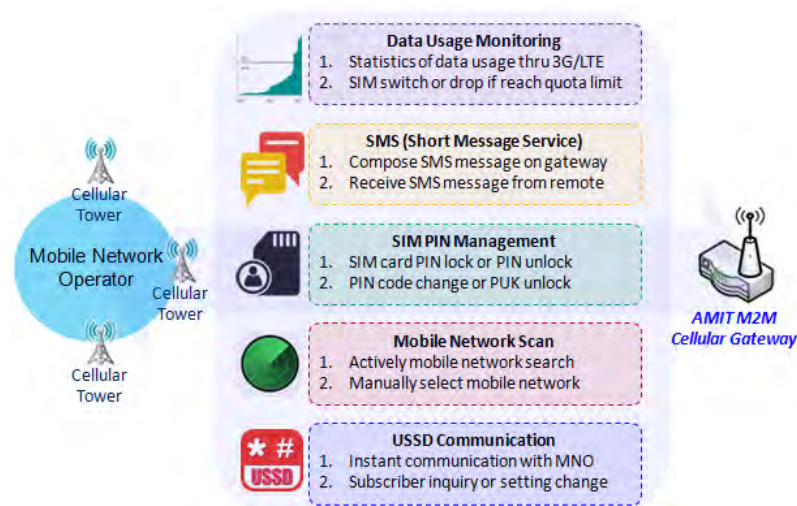

Diagnostic Tools		
Item	Value setting	Description
Ping Test	Optional Setting	This allows you to specify an IP / FQDN and the test interface (LAN, WAN, or Auto), so system will try to ping the specified device to test whether it is alive after clicking on the <b>Ping</b> button. A test result window will appear beneath it.
Tracert Test	Optional setting	Trace route (tracert) command is a network diagnostic tool for displaying the route (path) and measuring transit delays of packets across an IP network. Trace route proceeds until all (three) sent packets are lost for more than twice, then the connection is lost and the route cannot be evaluated. First, you need to specify an IP / FQDN, the test interface (LAN, WAN, or Auto) and the protocol (UDP or ICMP), and by default, it is <b>UDP</b> . Then, system will try to trace the specified host to test whether it is alive after clicking on <b>Tracert</b> button. A test result window will appear beneath it.
Wake on LAN	Optional setting	Wake on LAN (WOL) is an Ethernet networking standard that allows a computer to be turned on or awakened by a network message. You can specify the MAC address of the computer, in your LAN network, to be remotely turned on by clicking on the <b>Wake up</b> command button.
Save	N/A	Click the <b>Save</b> button to save the configuration.

# M2M Cellular Gateway

## Chapter 7 Service

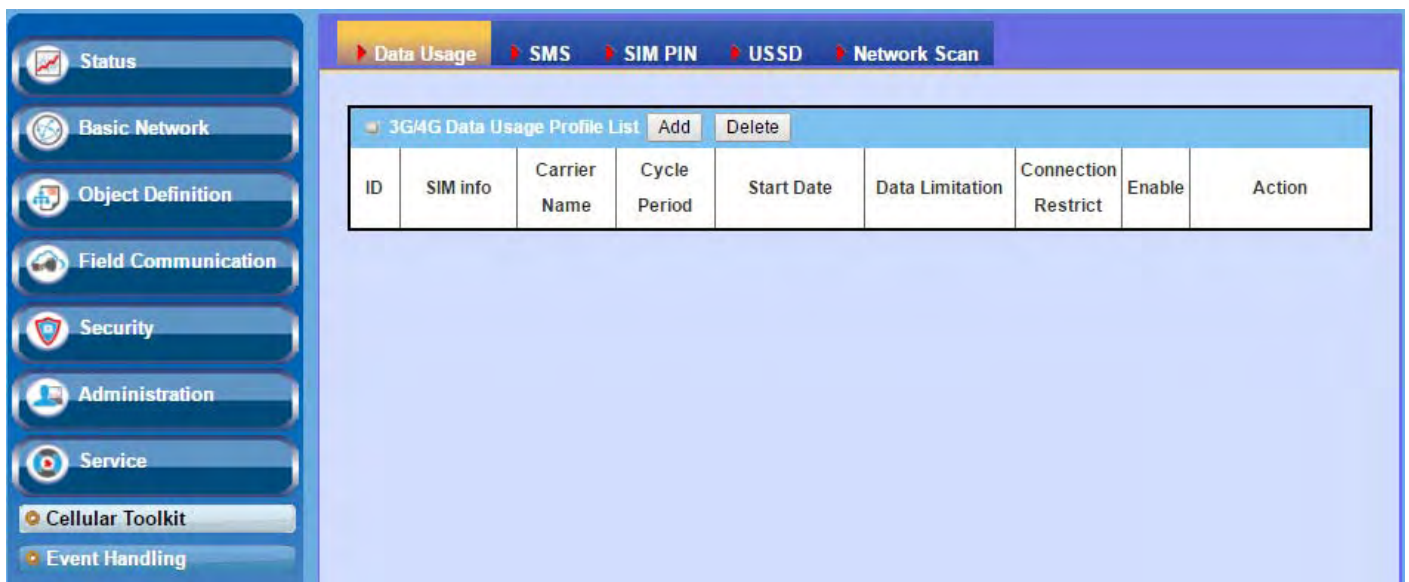

### 7.1 Cellular Toolkit

Besides cellular data connection, you may also like to monitor data usage of cellular WAN, sending text message through SMS, changing PIN code of SIM card, communicating with carrier/ISP by USSD command, or doing a cellular network scan for diagnostic purpose.

In Cellular Toolkit section, it includes several useful features that are related to cellular configuration or application. You can configure settings of Data Usage, SMS, SIM PIN, USSD, and Network Scan here. Please note at least a valid SIM card is required to be

inserted to device before you continue settings in this section.

# M2M Cellular Gateway

## 7.1.1 Data Usage

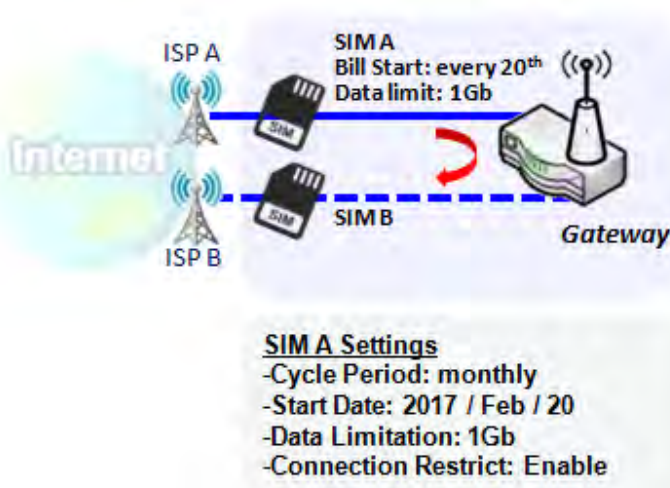

Most of data plan for cellular connection is with a limited amount of data usage. If data usage has been over limited quota, either you will get much lower data throughput that may affect your daily operation, or you will get a 'bill shock' in the next month because carrier/ISP charges a lot for the over-quota data usage.

With help from Data Usage feature, device will monitor cellular data usage continuously and take actions. If data usage reaches limited quota, device can be set to drop the cellular data connection right away. Otherwise, if secondary SIM card is inserted, device will switch to secondary SIM and establish another cellular data connection with secondary SIM automatically.

If Data Usage feature is enabled, all history of cellular data usage can be viewed at **Status > Statistics & Reports > Cellular Usage** tab.

3G/4G Data Usage Profile List <span>Add</span> <span>Delete</span>								
ID	SIM info	Carrier Name	Cycle Period	Start Date	Data Limitation	Connection Restrict	Enable	Action
1	3G/4G SIM A	ISP A	1 Monthly	Mon Feb 20 2017 00:00:00 GMT+0800	1GB	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<span>Edit</span> <input type="checkbox"/> <span>Select</span>

### 3G/4G Data Usage

Data Usage feature enabling gateway device to continuously monitor cellular data usage and take actions. In the diagram, quota limit of SIM A is **1Gb** per month and bill start date is **20<sup>th</sup>** of every month. The device is smart to start a new calculation of data usage on every 20<sup>th</sup> of month. Enable Connection Restrict will force gateway device to drop cellular connection of SIM A when data usage reaches quota limit (1Gb in this case). If SIM failover feature is configured in **Internet Setup**, then gateway will switch to SIM B and establish a new cellular data connection automatically.

# M2M Cellular Gateway

## Data Usage Setting

Go to **Service > Cellular Toolkit > Data Usage** tab.

Before finished settings for Data Usage, you need to know bill start date, bill period, and quota limit of data usage according to your data plan. You can ask this information from your carrier or ISP.

### Create / Edit 3G/4G Data Usage Profile

3G/4G Data Usage Profile List <span>Add</span> <span>Delete</span>								
ID	SIM info	Carrier Name	Cycle Period	Start Date	Data Limitation	Connection Restrict	Enable	Action

When **Add** button is applied, 3G/4G Data Usage Profile Configuration screen will appear. You can create up to four data usage profiles, one profile for each SIM card used in the Gateway.

3G/4G Data Usage Profile Configuration	
Item	Setting
SIM Select	3G/4G ▾ SIM A ▾
Carrier Name	<input type="text"/>
Cycle Period	Days ▾ 90 <input type="text"/>
Start Date	2016 ▾ / October ▾ / 11 ▾
Data Limitation	<input type="text"/> KB ▾
Connection Restrict	<input type="checkbox"/> Enable
Enable	<input checked="" type="checkbox"/> Enable

3G/4G Data Usage Profile Configuration		
Item Setting	Value setting	Description
<b>SIM Select</b>	3G/4G-1 and SIM A by default.	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ), and a SIM card bound to the selected cellular interface to configure its data usage profile.
<b>Carrier Name</b>	It is an optional item.	Fill in the Carrier Name for the selected SIM card for identification.
<b>Cycle Period</b>	Days by default	The first box has three types for cycle period. They are <b>Days</b> , <b>Weekly</b> and <b>Monthly</b> . <b>Days</b> : For per Days cycle periods, you have to further specify the number of days in the second box. <b>Value Range</b> : 1 ~ 90 days. <b>Weekly, Monthly</b> : The cycle period is one week or one month.
<b>Start Date</b>	N/A	Specify the date to start measure network traffic. Please don't select the day before now, otherwise, the traffic statistics will be incorrect.

## M2M Cellular Gateway

---

<b>Data Limitation</b>	N/A	Specify the allowable data limitation for the defined cycle period.
<b>Connection Restrict</b>	Un-Checked by default.	Check the <b>Enable</b> box to activate the connection restriction function. During the specified cycle period, if the actual data usage exceeds the allowable data limitation, the cellular connection will be forced to disconnect.
<b>Enable</b>	Un-Checked by default.	Check the <b>Enable</b> box to activate the data usage profile.

# M2M Cellular Gateway

## 7.1.2 SMS

Short Message Service (SMS) is a text messaging service, which is used to be widely-used on mobile phones. It uses standardized communications protocols to allow mobile phones or cellular devices to exchange short text messages in an instant and convenient way.

### SMS Setting

Go to **Service > Cellular Toolkit > SMS** tab

With this gateway device, you can send SMS text messages or browse received SMS messages as you usually do on a cellular phone.

### Setup SMS Configuration

Configuration	
Item	Setting
Physical Interface	3G/4G-1 ▼
SMS	<input checked="" type="checkbox"/> Enable SIM Status: SIM_A
SMS Storage	SIM Card Only ▼

Configuration		
Item	Value setting	Description
Physical Interface	The box is 3G/4G-1 by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) for the following SMS function configuration.
SMS	The box is checked by default	This is the SMS switch. If the box checked that the SMS function enable, if the box unchecked that the SMS function disable.
SIM Status	N/A	Depend on currently SIM status. The possible value will be <b>SIM_A</b> or <b>SIM_B</b> .
SMS Storage	The box is SIM Card Only by default	This is the SMS storage location. Currently the option only <b>SIM Card Only</b> .
Save	N/A	Click the <b>Save</b> button to save the settings

## SMS Summary

Show **Unread SMS**, **Received SMS**, **Remaining SMS**, and edit SMS context to send, read SMS from SIM card.

SMS Summary	
New SMS SMS Inbox	
Item	Setting
▶ Unread SMS	1
▶ Received SMS	7
▶ Remaining SMS	12

SMS Summary		
Item	Value setting	Description
Unread SMS	N/A	If SIM card insert to router first time, unread SMS value is zero. When received the new SMS but didn't read, this value plus one.
Received SMS	N/A	This value record the existing SMS numbers from SIM card, When received the new SMS, this value plus one.
Remaining SMS	N/A	This value is SMS capacity minus received SMS, When received the new SMS, this value minus one.
New SMS	N/A	Click <b>New SMS</b> button, a <b>New SMS</b> screen appears. User can set the SMS setting from this screen. Refer to New SMS in the next page.
SMS Inbox	N/A	Click <b>SMS Inbox</b> button, a <b>SMS Inbox List</b> screen appears. User can read or delete SMS, reply SMS or forward SMS from this screen. Refer to SMS Inbox List in the next page.
Refresh	N/A	Click the <b>Refresh</b> button to update the SMS summary immediately.

## New SMS

You can set the SMS setting from this screen.

New SMS Send	
Item	Setting
▶ Receivers	<input type="text"/> (Use '+' for International Format and ';' to Compose Multiple Receivers)
▶ Text Message	<div></div> Length of Current Input : 0
▶ Result	

## M2M Cellular Gateway

New SMS		
Item	Value setting	Description
Receivers	N/A	Write the receivers to send SMS. User need to add the semicolon and compose multiple receivers that can group send SMS.
Text Message	N/A	Write the SMS context to send SMS. The router supports up to a maximum of 1023 character for SMS context length.
Send	N/A	Click the <b>Send</b> button, above text message will be sent as a SMS.
Result	N/A	If SMS has been sent successfully, it will show <b>Send OK</b> , otherwise <b>Send Failed</b> will be displayed.

### SMS Inbox List

You can read or delete SMS, reply SMS or forward SMS from this screen.

<input type="checkbox"/> SMS Inbox List <input type="button" value="Refresh"/> <input type="button" value="Delete"/> <input type="button" value="Close"/>				
ID	From Phone Number	Timestamp	SMS Text Preview	Actions

SMS Inbox List		
Item	Value setting	Description
ID	N/A	The number or SMS.
From Phone Number	N/A	What the phone number from SMS
Timestamp	N/A	What time receive SMS
SMS Text Preview	N/A	Preview the SMS text. Click the <b>Detail</b> button to read a certain message.
Action	The box is unchecked by default	Click the <b>Detail</b> button to read the SMS detail; Click the <b>Reply / Forward</b> button to reply/forward SMS. Besides, you can check the box(es), and then click the <b>Delete</b> button to delete the checked SMS(s).
Refresh	N/A	Refresh the SMS Inbox List.
Delete	N/A	Delete the SMS for all checked box from Action.
Close	N/A	Close the Detail SMS Message screen.

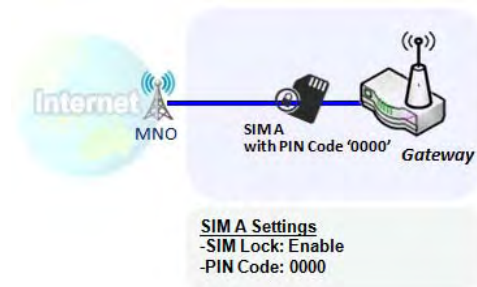

# M2M Cellular Gateway

## 7.1.3 SIM PIN

With most cases in the world, users need to insert a SIM card (a.k.a. UICC) into end devices to get on cellular network for voice service or data surfing. The SIM card is usually released by mobile operators or service providers. Each SIM card has a unique number (so-called ICCID) for network owners or service providers to identify each subscriber. As SIM card plays an important role between service providers and subscribers, some security mechanisms are required on SIM card to prevent any unauthorized access.

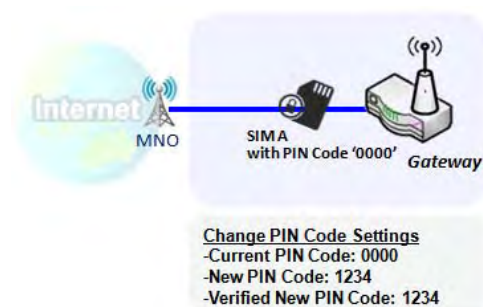

Enabling a PIN code in SIM card is an easy and effective way of protecting cellular devices from unauthorized access. This gateway device allows you to activate and manage PIN code on a SIM card through its web GUI.

### Activate PIN code on SIM Card

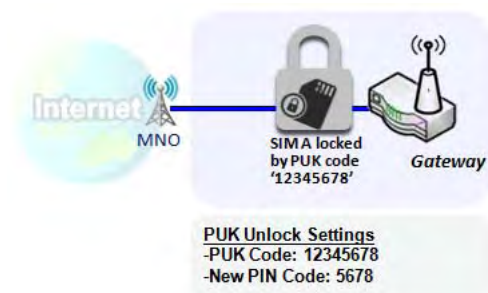

This gateway device allows you to activate PIN code on SIM card. This example shows how to activate PIN code on SIM-A for 3G/4G-1 with default PIN code “0000”.

### Change PIN code on SIM Card

This gateway device allows you to change PIN code on SIM card. Following the example above, you need to type original PIN code “0000”, and then type new PIN code with ‘1234’ if you like to set new PIN code as ‘1234’. To confirm the new PIN code you type is what you want, you need to type new PIN code ‘1234’ in Verified New PIN Code again.

### Unlock SIM card by PUK Code

If you entered incorrect PIN code at configuration page for 3G/4G-1 WAN over three times, and then it will cause SIM card to be locked by PUK code. Then you have to call service number to get a PUK code to unlock SIM card. In the diagram, the PUK code is “12345678” and new PIN code is “5678”.

# M2M Cellular Gateway

## SIM PIN Setting

Go to **Service > Cellular Toolkit > SIM PIN** Tab

With the SIM PIN Function window, it allows you to enable or disable SIM lock (which means protected by PIN code), or change PIN code. You can also see the information of remaining times of failure trials as we mentioned earlier. If you run out of these failure trials, you need to get a PUK code to unlock SIM card.

### Select a SIM Card

Configuration	
Item	Setting
Physical Interface	3G/4G-1 ▼
SIM Status	SIM-A Ready
SIM Selection	SIM-A ▼ <input type="button" value="Switch"/>

Configuration Window		
Item	Value setting	Description
Physical Interface	The box is 3G/4G-1 by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) to change the SIM PIN setting for the selected SIM Card. The number of physical modems depends on the gateway model you purchased.
SIM Status	N/A	Indication for the selected SIM card and the SIM card status. The status could be <b>Ready</b> , <b>Not Insert</b> , or <b>SIM PIN</b> . <b>Ready</b> -- SIM card is inserted and ready to use. It can be a SIM card without PIN protection or that SIM card is already unlocked by correct PIN code. <b>Not Insert</b> -- No SIM card is inserted in that SIM slot. <b>SIM PIN</b> -- SIM card is protected by PIN code, and it's not unlocked by a correct PIN code yet. That SIM card is still at locked status.
SIM Selection	N/A	Select the SIM card for further SIM PIN configuration. Press the <b>Switch</b> button, then the Gateway will switch SIM card to another one. After that, you can configure the SIM card.

# M2M Cellular Gateway

## Enable / Change PIN Code

Enable or Disable PIN code (password) function, and even change PIN code function.

SIM function		Save	Change PIN Code
Item	Setting		
▶ SIM lock	<input type="checkbox"/> Enable PIN Code: <input type="text"/> (4~8 digits)		
▶ Remaining times	3		

SIM function Window		
Item Setting	Value setting	Description
<b>SIM lock</b>	Depend on SIM card	Click the <b>Enable</b> button to activate the SIM lock function. For the first time you want to enable the SIM lock function, you have to fill in the PIN code as well, and then click <b>Save</b> button to apply the setting.
<b>Remaining times</b>	Depend on SIM card	Represent the remaining trial times for the SIM PIN unlocking.
<b>Save</b>	N/A	Click the <b>Save</b> button to apply the setting.
<b>Change PIN Code</b>	N/A	Click the <b>Change PIN code</b> button to change the PIN code (password). If the <b>SIM Lock</b> function is not enabled, the <b>Change PIN code</b> button is disabled. In the case, if you still want to change the PIN code, you have to enable the SIM Lock function first, fill in the PIN code, and then click the <b>Save</b> button to enable. After that, You can click the <b>Change PIN code</b> button to change the PIN code.

When **Change PIN Code** button is clicked, the following screen will appear.

Item	Setting	
▶ Current PIN Code	<input type="text"/>	(4~8 digits)
▶ New PIN Code	<input type="text"/>	(4~8 digits)
▶ Verified New PIN Code	<input type="text"/>	(4~8 digits)

Apply Cancel

Item	Value Setting	Description
<b>Current PIN Code</b>	A Must filled setting	Fill in the current (old) PIN code of the SIM card.
<b>New PIN Code</b>	A Must filled setting	Fill in the new PIN Code you want to change.
<b>Verified New PIN Code</b>	A Must filled setting	Confirm the new PIN Code again.
<b>Apply</b>	N/A	Click the <b>Apply</b> button to change the PIN code with specified new PIN code.
<b>Cancel</b>	N/A	Click the <b>Cancel</b> button to cancel the changes and keep current PIN code.

**Note:** If you changed the PIN code for a certain SIM card, you must also change the corresponding PIN code

## M2M Cellular Gateway

specified in the **Basic Network > WAN & Uplink > Internet Setup > Connection with SIM Card** page. Otherwise, it may result in wrong SIM PIN trials with invalid (old) PIN code.

### Unlock with a PUK Code

The PUK Function window is only available for configuration if that SIM card is locked by PUK code. It means that SIM card is locked and needs additional PUK code to unlock. Usually it happens after too many trials of incorrect PIN code, and the remaining times in SIM Function table turns to 0. In this situation, you need to contact your service provider and request a PUK code for your SIM card, and try to unlock the locked SIM card with the provided PUK code. After unlocking a SIM card by PUK code successfully, the SIM lock function will be activated automatically.

Item	Setting
▶ PUK status	PUK unlock.
▶ Remaining times	N/A
▶ PUK Code	<input type="text"/> (8 digits)
▶ New PIN Code	<input type="text"/> (4~8 digits)

PUK Function Window		
Item	Value setting	Description
PUK status	PUK Unlock / PUK Lock	Indication for the PUK status. The status could be <b>PUK Lock</b> or <b>PUK Unlock</b> . As mentioned earlier, the SIM card will be locked by PUK code after too many trials of failure PIN code. In this case, the PUK Status will turns to <b>PUK Lock</b> . In a normal situation, it will display <b>PUK Unlock</b> .
Remaining times	Depend on SIM card	Represent the remaining trial times for the PUK unlocking. Note : <b>DO NOT make the remaining times down to zero, it will damage the SIM card FOREVER !</b> Call for your ISP's help to get a correct PUK and unlock the SIM if you don't have the PUK code.
PUK Code	A Must filled setting	Fill in the PUK code (8 digits) that can unlock the SIM card in PUK unlock status.
New PIN Code	A Must filled setting	Fill in the New PIN Code (4~8 digits) for the SIM card. You have to determine your new PIN code to replace the old, forgotten one. Keep the PIN code (password) in mind with care.
Save	N/A	Click the <b>Save</b> button to apply the setting.

**Note:** If you changed the PUK code and PIN code for a certain SIM card, you must also change the corresponding PIN code specified in the **Basic Network > WAN & Uplink > Internet Setup > Connection with SIM Card** page. Otherwise, it may result in wrong SIM PIN trials with invalid (old) PIN code.

# M2M Cellular Gateway

## 7.1.4 USSD

Unstructured Supplementary Service Data (USSD) is a protocol used by GSM cellular telephones to communicate with the service provider's computers. USSD can be used for WAP browsing, prepaid callback service, mobile-money services, location-based content services, menu-based information services, and as part of configuring the phone on the network.

An USSD message is up to 182 alphanumeric characters in length. Unlike Short Message Service (SMS) messages, USSD messages create a real-time connection during an USSD session. The connection remains open, allowing a two-way exchange of a sequence of data. This makes USSD more responsive than services that use SMS.

Configuration

Item	Setting
USSD Profile	roaming setting
USSD Command	*135#
USSD Response	< ChungHwa Data Roaming Services> 1 Order 2 Query 3 Setting 4 使用中文

### USSD Scenario

USSD allows you to have an instant bi-directional communication with carrier/ISP. In the diagram, the USSD command **"\*135#"** is referred to data roaming services. After sending that USSD command to carrier, you can get a response at window **USSD Response**. Please note the USSD command varies for different carriers/ISP.

# M2M Cellular Gateway

## USSD Setting

Go to **Service > Cellular Toolkit > USSD** tab.

In "USSD" page, there are four windows for the USSD function. The "Configuration" window can let you specify which 3G/4G module (physical interface) is used for the USSD function, and system will show which SIM card in the module is the current used one. The second window is the "USSD Profile List" and it shows all your defined USSD profiles that store pre-commands for activating an USSD session. An "Add" button in the window can let you add one new USSD profile and define the command for the profile in the third window, the "USSD Profile Configuration". When you want to start the activation of an USSD connection session to the USSD server, select the USSD profile or type in the correct pre-command, and then click on the "Send" button for the session. The responses from the USSD server will be displayed beneath the "USSD Command" line. When commands typed in the "USSD Command" field are sent, received responses will be displayed in the "USSD Response" blank space. User can communicate with the USSD server by sending USSD commands and getting USSD responses via the gateway.

## USSD Configuration

Configuration	
Item	Setting
Physical Interface	3G/4G-1 SIM Status: SIM_A

Configuration Item	Value setting	Description
Physical Interface	The box is <b>3G/4G-1</b> by default.	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) to configure the USSD setting for the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ).
SIM Status	N/A	Show the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ).

## Create / Edit USSD Profile

The cellular gateway allows you to custom your USSD profile. It supports up to a maximum of 35 USSD profiles.

USSD Profile List <span>Add</span> <span>Delete</span>

Item	Setting
▶ Profile Name	<input type="text"/>
▶ USSD Command	<input type="text"/>
▶ Comments	<input type="text"/>

USSD Profile Configuration		
Item	Value setting	Description
Profile Name	N/A	Enter a name for the USSD profile.
USSD Command	N/A	Enter the USSD command defined for the profile. Normally, it is a command string composed with numeric keypad "0~9", "*", and "#". The USSD commands are highly related to the cellular service, please check with your service provider for the details.
Comments	N/A	Enter a brief comment for the profile.

### Send USSD Request

When **send** the USSD command, the USSD Response screen will appear.

When click the **Clear** button, the USSD Response will disappear.

USSD Request <span>Send</span> <span>Clear</span>	
Item	Setting
▶ USSD Profile	<input type="text" value="--- Option ---"/>
▶ USSD Command	<input type="text"/>

USSD Request		
Item	Value setting	Description
USSD Profile	N/A	Select a USSD profile name from the dropdown list.
USSD Command	N/A	The USSD Command string of the selected profile will be shown here.
USSD Response	N/A	Click the <b>Send</b> button to send the USSD command, and the <b>USSD Response</b> screen will appear. You will see the response message of the corresponding service, receive the service SMS.

# M2M Cellular Gateway

## 7.1.5 Network Scan

"Network Scan" function can let administrator specify the device how to connect to the mobile system for data communication in each 3G/4G interface. For example, administrator can specify which generation of mobile system is used for connection, 2G, 3G or LTE. Moreover, he can define their connection sequence for the gateway device to connect to the mobile system automatically. Administrator also can scan the mobile systems in the air manually, select the target operator system and apply it. The manual scanning approach is used for problem diagnosis.

### Network Scan Setting

Go to **Service > Cellular Toolkit > Network Scan** tab.

In "Network Scan" page, there are two windows for the Network Scan function. The "Configuration" window can let you select which 3G/4G module (physical interface) is used to perform Network Scan, and system will show the current used SIM card in the module. You can configure each 3G/4G WAN interface by executing the network scanning one after another. You can also specify the connection sequence of the targeted generation of mobile system, 2G/3G/LTE.

### Network Scan Configuration

Configuration	
Item	Setting
Physical Interface	3G/4G-1 ▼ SIM Status: SIM_A
Network Type	Auto ▼
Scan Approach	Auto ▼

Configuration		
Item	Value setting	Description
Physical Interface	The box is <b>3G/4G-1</b> by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) for the network scan function. <b>Note:</b> <b>3G/4G-2</b> is only available for the product with dual cellular module.
SIM Status	N/A	Show the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ).
Network Type	<b>Auto</b> is selected by default.	Specify the network type for the network scan function. It can be Auto, 2G Only, 2G prefer, 3G Only, 3G prefer, or LTE Only. When <b>Auto</b> is selected, the network will be register automatically; If the <b>prefer</b> option is selected, network will be register for your option first; If the <b>only</b> option is selected, network will be register for your option only.
Scan Approach	<b>Auto</b> is selected by default.	When <b>Auto</b> selected, cellular module register automatically. If the <b>Manually</b> option is selected, a <b>Network Provider List</b> screen appears. Press <b>Scan</b> button to scan for the nearest base stations. Select (check the box) the preferred base stations then click <b>Apply</b> button to apply settings.

## M2M Cellular Gateway

Save

N/A

Click **Save** to save the settings

The second window is the "Network Provider List" window and it appears when the **Manually** Scan Approach is selected in the Configuration window. By clicking on the "Scan" button and wait for 1 to 3 minutes, the found mobile operator system will be displayed for you to choose. Click again on the "Apply" button to drive system to connect to that mobile operator system for the dedicated 3G/4G interface.

Network Provider List <span>Scan</span> <span>Apply</span>			
Provider Name	Mobile System	Network Status	Action
Chunghwa Telecom	4G	Current	<input type="checkbox"/> Select
Far EasTone	3G	Forbidden	<input type="checkbox"/> Select

## 8.1 Dashboard (not supported)

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## 8.2 Basic Network

### 8.2.1 WAN & Uplink Status

Go to **Status > Basic Network > WAN & Uplink** tab.

The **WAN & Uplink Status** window shows the current status for different network type, including network configuration, connecting information, modem status and traffic statistics. The display will be refreshed on every five seconds.

#### WAN interface IPv4 Network Status

WAN interface IPv4 Network Status screen shows status information for IPv4 network.

WAN Interface IPv4 Network Status										
ID	Interface	WAN Type	Network Type	IP Addr.	Subnet Mask	Gateway	DNS	MAC Address	Conn. Status	Action
WAN-1	3G/4G	3G/4G	NAT	0.0.0.0	0.0.0.0	0.0.0.0	0.0.0.0, 0.0.0.0	N/A	Disconnected	Edit
WAN-2		Disable								Edit

WAN interface IPv4 Network Status		
Item	Value setting	Description
ID	N/A	It displays corresponding WAN interface WAN IDs.
Interface	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
WAN Type	N/A	It displays the method which public IP address is obtained from your ISP. Depending on the model purchased, it can be Static IP, Dynamic IP, PPPoE, PPTP, L2TP, 3G/4G.
Network Type	N/A	It displays the network type for the WAN interface(s). Depending on the model purchased, it can be NAT, Routing, Bridge, or IP Pass-through.
IP Addr.	N/A	It displays the public IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
Subnet Mask	N/A	It displays the Subnet Mask for public IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
Gateway	N/A	It displays the Gateway IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
DNS	N/A	It displays the IP address of DNS server obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
MAC Address	N/A	It displays the MAC Address for your ISP to allow you for Internet access. Note: Not all ISP may require this field.
Conn. Status	N/A	It displays the connection status of the device to your ISP.

## M2M Cellular Gateway

		Status are Connected or disconnected.
		This area provides functional buttons.
<b>Action</b>	N/A	<b>Renew</b> button allows user to force the device to request an IP address from the DHCP server. Note: <b>Renew</b> button is available when DHCP WAN Type is used and WAN connection is disconnected.
		<b>Release</b> button allows user to force the device to clear its IP address setting to disconnect from DHCP server. Note: <b>Release</b> button is available when DHCP WAN Type is used and WAN connection is connected.
		<b>Connect</b> button allows user to manually connect the device to the Internet. Note: Connect button is available when Connection Control in WAN Type setting is set to Connect Manually (Refer to <b>Edit</b> button in <b>Basic Network &gt; WAN &amp; Uplink &gt; Internet Setup</b> ) and WAN connection status is disconnected.
		<b>Disconnect</b> button allows user to manually disconnect the device from the Internet. Note: <b>Connect</b> button is available when Connection Control in WAN Type setting is set to Connect Manually (Refer to <b>Edit</b> button in <b>Basic Network &gt; WAN &amp; Uplink &gt; Internet Setup</b> ) and WAN connection status is connected.

## WAN interface IPv6 Network Status

WAN interface IPv6 Network Status screen shows status information for IPv6 network.

WAN Interface IPv6 Network Status						
ID	Interface	WAN Type	Link-local IP Address	Global IP Address	Conn. Status	Action
WAN-1	Ethernet	DHCPv6	fe80::250:18ff:fe16:1121	/64	Disconnected	Connect Edit

WAN interface IPv6 Network Status		
Item	Value setting	Description
<b>ID</b>	N/A	It displays corresponding WAN interface WAN IDs.
<b>Interface</b>	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
<b>WAN Type</b>	N/A	It displays the method which public IP address is obtained from your ISP. WAN type setting can be changed from <b>Basic Network &gt; IPv6 &gt; Configuration</b> .
<b>Link-local IP Address</b>	N/A	It displays the LAN IPv6 Link-Local address.
<b>Global IP Address</b>	N/A	It displays the IPv6 global IP address assigned by your ISP for your Internet connection.
<b>Conn. Status</b>	N/A	It displays the connection status. The status can be connected, disconnected and connecting.
<b>Action</b>	N/A	This area provides functional buttons.

# M2M Cellular Gateway

**Edit Button** when pressed, web-based utility will take you to the IPv6 configuration page. (**Basic Network > IPv6 > Configuration.**)

## LAN Interface Network Status

**LAN Interface Network Status** screen shows IPv4 and IPv6 information of LAN network.

LAN Interface Network Status					
IPv4 Address	IPv4 Subnet Mask	IPv6 Link-local Address	IPv6 Global Address	MAC Address	Action
192.168.123.254	255.255.255.0	fe80::250:18ff:fe00:ffe	/64	00:50:18:00:0F:FE	<a href="#">Edit IPv4</a> <a href="#">Edit IPv6</a>

LAN Interface Network Status		
Item	Value setting	Description
IPv4 Address	N/A	It displays the current IPv4 IP Address of the gateway This is also the IP Address user use to access Router's Web-based Utility.
IPv4 Subnet Mask	N/A	It displays the current mask of the subnet.
IPv6 Link-local Address	N/A	It displays the current LAN IPv6 Link-Local address. This is also the IPv6 IP Address user use to access Router's Web-based Utility.
IPv6 Global Address	N/A	It displays the current IPv6 global IP address assigned by your ISP for your Internet connection.
MAC Address	N/A	It displays the LAN MAC Address of the gateway
Action	N/A	This area provides functional buttons. <b>Edit IPv4 Button</b> when press, web-based utility will take you to the Ethernet LAN configuration page. ( <b>Basic Network &gt; LAN &amp; VLAN &gt; Ethernet LAN</b> tab). <b>Edit IPv6 Button</b> when press, web-based utility will take you to the IPv6 configuration page. ( <b>Basic Network &gt; IPv6 &gt; Configuration.</b> )

## 3G/4G Modem Status

**3G/4G Modem Status List** screen shows status information for 3G/4G WAN network(s).

3G/4G Modem Status List <a href="#">Refresh</a>					
Interface	Card Information	Link Status	Signal Strength	Network Name	Action
3G/4G	ME3620-J	Disconnected	N/A		<a href="#">Detail</a>

3G/4G Modem Status List		
Item	Value setting	Description
Physical Interface	N/A	It displays the type of WAN physical interface. Note: Some device model may support two 3G/4G modules. Their physical interface

## M2M Cellular Gateway

		name will be <b>3G/4G-1</b> and <b>3G/4G-2</b> .
<b>Card Information</b>	N/A	It displays the vendor's 3G/4G modem model name.
<b>Link Status</b>	N/A	It displays the 3G/4G connection status. The status can be Connecting, Connected, Disconnecting, and Disconnected.
<b>Signal Strength</b>	N/A	It displays the 3G/4G wireless signal level.
<b>Network Name</b>	N/A	It displays the name of the service network carrier.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to renew the information.
<b>Action</b>	N/A	This area provides functional buttons. <b>Detail Button</b> when press, windows of detail information will appear. They are the Modem Information, SIM Status, and Service Information. Refer to next page for more.

When the **Detail** button is pressed, 3G/4G modem information windows such as Modem Information, SIM Status, Service Information, Signal Strength / Quality, and Error Message will appear.

## Interface Traffic Statistics

**Interface Traffic Statistics** screen displays the Interface's total transmitted packets.

Interface Traffic Statistics			
ID	Interface	Received Packets(Mb)	Transmitted Packets(Mb)
WAN-1	3G/4G	0	0
WAN-2		-	-

Interface Traffic Statistics		
Item	Value setting	Description
<b>ID</b>	N/A	It displays corresponding WAN interface WAN IDs.
<b>Interface</b>	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
<b>Received Packets (Mb)</b>	N/A	It displays the downstream packets (Mb). It is reset when the device is rebooted.
<b>Transmitted Packets (Mb)</b>	N/A	It displays the upstream packets (Mb). It is reset when the device is rebooted.

# M2M Cellular Gateway

## 8.2.2 LAN & VLAN Status

Go to **Status > Basic Network > LAN & VLAN** tab.

### Client List

The **Client List** shows you the LAN Interface, IP address, Host Name, MAC Address, and Remaining Lease Time of each device that is connected to this gateway.

LAN Client List				
LAN Interface	IP Address	Host Name	MAC Address	Remaining Lease Time
Ethernet	Dynamic / 192.168.1.100	amit-25611230-1	00-01-0A-10-0F-17	23:59:51

LAN Client List		
Item	Value setting	Description
LAN Interface	N/A	Client record of LAN Interface. String Format.
IP Address	N/A	Client record of IP Address Type and the IP Address. Type is String Format and the IP Address is IPv4 Format.
Host Name	N/A	Client record of Host Name. String Format.
MAC Address	N/A	Client record of MAC Address. MAC Address Format.
Remaining Lease Time	N/A	Client record of Remaining Lease Time. Time Format.

## M2M Cellular Gateway

### 8.2.3 WiFi Status (not supported)

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## 8.2.4 DDNS Status

Go to **Status > Basic Network > DDNS** tab.

The **DDNS Status** window shows the current DDNS service in use, the last update status, and the last update time to the DDNS service server.

### DDNS Status

DDNS Status List				
Host Name	Provider	Effective IP	Last Update Status	Last Update Time

DDNS Status		
Item	Value Setting	Description
Host Name	N/A	It displays the name you entered to identify DDNS service provider
Provider	N/A	It displays the DDNS server of DDNS service provider
Effective IP	N/A	It displays the public IP address of the device updated to the DDNS server
Last Update Status	N/A	It displays whether the last update of the device public IP address to the DDNS server has been successful (Ok) or failed (Fail).
Last Update Time	N/A	It displays time stamp of the last update of public IP address to the DDNS server.
Refresh	N/A	The <b>refresh</b> button allows user to force the display to refresh information.

## L2TP Client Status

**L2TP Client Status** shows the configuration for establishing L2TP tunnel and current connection status.

L2TP Client Status		Edit					
L2TP Client Name	Interface	Virtual IP	Remote IP/FQDN	Default Gateway/Remote Subnet	Conn. Time	Status	
L2TP Client Status							
Item	Value setting		Description				
Client Name	N/A		It displays Name for the L2TP Client specified.				
Interface	N/A		It displays the WAN interface with which the gateway will use to request PPTP tunneling connection to the PPTP server.				
Virtual IP	N/A		It displays the IP address assigned by Virtual IP server of L2TP server.				
Remote IP/FQDN	N/A		It displays the L2TP Server's Public IP address (the WAN IP address) or FQDN.				
Default Gateway/Remote Subnet	N/A		It displays the specified IP address of the gateway device used to connect to the internet to connect to the L2TP server –the default gateway. Or other specified subnet if the default gateway is not used to connect to the L2TP server –the remote subnet.				
Conn. Time	N/A		It displays the connection time for the L2TP tunnel.				
Status	N/A		It displays the Status of the VPN connection. The status displays Connected, Disconnect, and Connecting.				
Edit	N/A		Click on <b>Edit</b> Button to change L2TP client setting, web-based utility will take you to the L2TP client page. ( <b>Security &gt; VPN &gt; L2TP</b> tab)				

# M2M Cellular Gateway

## PPTP Client Status

**PPTP Client Status** shows the configuration for establishing PPTP tunnel and current connection status.

PPTP Client Status		Edit					
PPTP Client Name	Interface	Virtual IP	Remote IP/FQDN	Default Gateway/Remote Subnet	Conn. Time	Status	
PPTP Client Status							
Item	Value setting		Description				
Client Name	N/A		It displays Name for the PPTP Client specified.				
Interface	N/A		It displays the WAN interface with which the gateway will use to request PPTP tunneling connection to the PPTP server.				
Virtual IP	N/A		It displays the IP address assigned by Virtual IP server of PPTP server.				
Remote IP/FQDN	N/A		It displays the PPTP Server's Public IP address (the WAN IP address) or FQDN.				
Default Gateway / Remote Subnet	N/A		It displays the specified IP address of the gateway device used to connect to the internet to connect to the PPTP server –the default gateway. Or other specified subnet if the default gateway is not used to connect to the PPTP server –the remote subnet.				
Conn. Time	N/A		It displays the connection time for the PPTP tunnel.				
Status	N/A		It displays the Status of the VPN connection. The status displays Connected, Disconnect, and Connecting.				
Edit Button	N/A		Click on <b>Edit</b> Button to change PPTP client setting, web-based utility will take you to the PPTP server page. ( <b>Security &gt; VPN &gt; PPTP</b> tab)				

# M2M Cellular Gateway

## 8.3.2 Firewall Status

Go to **Status > Security > Firewall Status** Tab.

The **Firewall Status** provides user a quick view of the firewall status and current firewall settings. It also keeps the log history of the dropped packets by the firewall rule policies, and includes the administrator remote login settings specified in the Firewall Options.

By clicking the icon [+], the status table will be expanded to display log history. Clicking the **Edit** button the screen will be switched to the configuration page.

### Packet Filter Status

Packet Filters <span>Edit</span> <span>[+]</span>			
Activated Filter Rule	Detected Contents	IP	Time

Packet Filter Status		
Item	Value setting	Description
Activated Filter Rule	N/A	This is the Packet Filter Rule name.
Detected Contents	N/A	This is the logged packet information, including the source IP, destination IP, protocol, and destination port –the TCP or UDP. String format: Source IP to Destination IP : Destination Protocol (TCP or UDP)
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

*Note: Ensure Packet Filter Log Alert is enabled.*

*Refer to **Security > Firewall > Packet Filter** tab. Check Log Alert and save the setting.*

### URL Blocking Status

URL Blocking <span>Edit</span> <span>[+]</span>			
Activated Blocking Rule	Blocked URL	IP	Time

URL Blocking Status		
Item	Value setting	Description
Activated Blocking Rule	N/A	This is the URL Blocking Rule name.
Blocked URL	N/A	This is the logged packet information.

## M2M Cellular Gateway

IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

*Note: Ensure URL Blocking Log Alert is enabled.*

*Refer to **Security > Firewall > URL Blocking** tab. Check Log Alert and save the setting.*

### Web Content Filter Status

 Web Content Filters <span>Edit</span> <span>[ + ]</span>			
Activated Filter Rule	Detected Contents	IP	Time

Web Content Filter Status		
Item	Value setting	Description
Activated Filter Rule	N/A	Logged packet of the rule name. String format.
Detected Contents	N/A	Logged packet of the filter rule. String format.
IP	N/A	Logged packet of the Source IP. IPv4 format.
Time	N/A	Logged packet of the Date Time. Date time format ("Month" "Day" "Hours":"Minutes":"Seconds")

*Note: Ensure Web Content Filter Log Alert is enabled.*

*Refer to **Security > Firewall > Web Content Filter** tab. Check Log Alert and save the setting.*

# M2M Cellular Gateway

## MAC Control Status

<div>MAC Control</div> <div>Edit</div> <div>[+]</div>			
Activated Control Rule	Blocked MAC Addresses	IP	Time

MAC Control Status		
Item	Value setting	Description
Activated Control Rule	N/A	This is the MAC Control Rule name.
Blocked MAC Addresses	N/A	This is the MAC address of the logged packet.
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

Note: Ensure MAC Control Log Alert is enabled.

Refer to **Security > Firewall > MAC Control** tab. Check Log Alert and save the setting.

## Application Filters Status

<div>Application Filters</div> <div>Edit</div> <div>[+]</div>			
Filtered Application Category	Filtered Application Name	IP	Time

Application Filters Status		
Item	Value setting	Description
Filtered Application Category	N/A	The name of the Application Category being blocked.
Filtered Application Name	N/A	The name of the Application being blocked.
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

Note: Ensure Application Filter Log Alert is enabled.

Refer to **Security > Firewall > Application Filter** tab. Check Log Alert and save the setting.

# M2M Cellular Gateway

## IPS Status

IPS <span>Edit</span> <span>[+]</span>		
Detected Intrusion	IP	Time

IPS Firewall Status		
Item	Value setting	Description
Detected Intrusion	N/A	This is the intrusion type of the packets being blocked.
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

Note: Ensure IPS Log Alert is enabled.

Refer to **Security > Firewall > IPS** tab. Check Log Alert and save the setting.

## Firewall Options Status

Options <span>Edit</span> <span>[+]</span>			
Stealth Mode	SPI	Discard Ping from WAN	Remote Administrator Management

Firewall Options Status		
Item	Value setting	Description
Stealth Mode	N/A	Enable or Disable setting status of Stealth Mode on Firewall Options. String Format: Disable or Enable
SPI	N/A	Enable or Disable setting status of SPI on Firewall Options. String Format : Disable or Enable
Discard Ping from WAN	N/A	Enable or Disable setting status of Discard Ping from WAN on Firewall Options. String Format: Disable or Enable
Remote Administrator Management	N/A	Enable or Disable setting status of Remote Administrator. If Remote Administrator is enabled, it shows the currently logged in administrator's source IP address and login user name and the login time. Format: IP : "Source IP", User Name: "Login User Name", Time: "Date time" Example: IP: 192.168.127.39, User Name: admin, Time: Mar 3 01:34:13

Note: Ensure Firewall Options Log Alert is enabled.

Refer to **Security > Firewall > Options** tab. Check Log Alert and save the setting.

# M2M Cellular Gateway

## 8.4 Administration

### 8.4.1 Configure & Manage Status

Go to **Status > Administration > Configure & Manage** tab.

The **Configure & Manage Status** window shows the status for managing remote network devices. The type of management available in your device is depended on the device model purchased. The commonly used ones are the SNMP, TR-069, and UPnP.

#### SNMP Linking Status

**SNMP Link Status** screen shows the status of current active SNMP connections.

SNMP Linking Status						
User Name	IP Address	Port	Community	Auth. Mode	Privacy Mode	SNMP Version

SNMP Link Status		
Item	Value setting	Description
User Name	N/A	It displays the user name for authentication. This is only available for SNMP version 3.
IP Address	N/A	It displays the IP address of SNMP manager.
Port	N/A	It displays the port number used to maintain connection with the SNMP manager.
Community	N/A	It displays the community for SNMP version 1 or version 2c only.
Auth. Mode	N/A	It displays the authentication method for SNMP version 3 only.
Privacy Mode	N/A	It displays the privacy mode for version 3 only.
SNMP Version	N/A	It displays the SNMP Version employed.

#### SNMP Trap Information

**SNMP Trap Information** screen shows the status of current received SNMP traps.

SNMP Trap Information		
Trap Level	Time	Trap Event

SNMP Trap Information		
Item	Value setting	Description
Trap Level	N/A	It displays the trap level.
Time	N/A	It displays the timestamp of trap event.
Trap Event	N/A	It displays the IP address of the trap sender and event type.

# M2M Cellular Gateway

## TR-069 Status

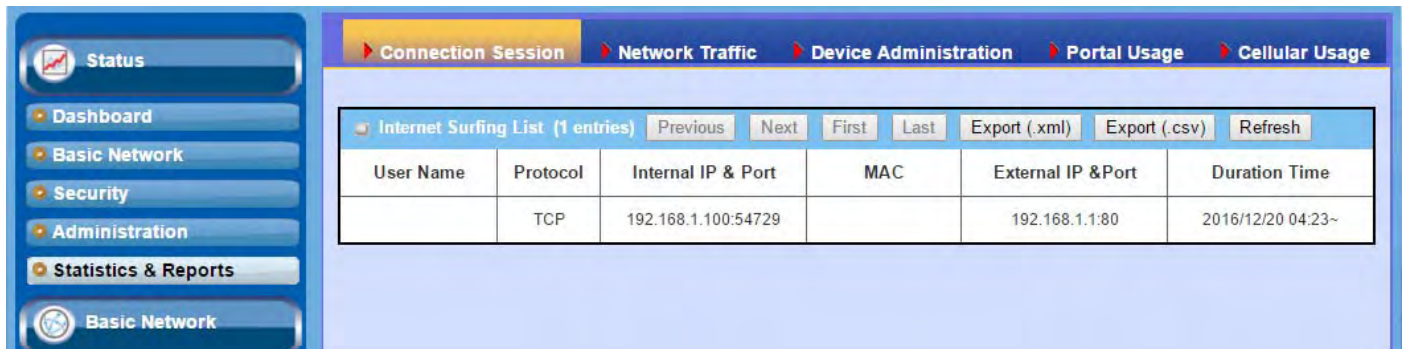

TR-069 Status screen shows the current connection status with the TR-068 server.

TR-069 Status	
Link Status	
Off	

TR-069 Status		
Item	Value setting	Description
Link Status	N/A	It displays the current connection status with the TR-068 server. The connection status is either On when the device is connected with the TR-068 server or Off when disconnected.

# M2M Cellular Gateway

## 8.5 Statistics & Report

### 8.5.1 Connection Session

Go to **Status > Statistics & Reports > Connection Session** tab.

**Internet Surfing Statistic** shows the connection tracks on this router.

Internet Surfing List (33 entries)						Previous	Next	First	Last	Export (.xml)	Export (.csv)	Refresh
User Name	Protocol	Internal IP & Port	MAC	External IP & Port	Duration Time							
	UDP	192.168.123.100:51736		192.168.123.254:53	2017/03/22 03:43~							
	UDP	192.168.123.100:55986		192.168.123.254:53	2017/03/22 03:43~							
	UDP	192.168.123.100:49548		192.168.123.254:53	2017/03/22 03:43~

# M2M Cellular Gateway

## 8.5.3 Device Administration

Go to **Status > Statistics & Reports > Device Administration** tab.

**Device Administration** shows the login information.

Device Manager Login Statistics					Previous	Next	First	Last	Export (.xml)	Export (.csv)	Refresh
User Name	Protocol Type	IP Address	User Level	Duration Time							
admin	http/https	192.168.123.100	Admin	2017/03/22 03:31~							

Device Manager Login Statistic		
Item	Value setting	Description
Previous	N/A	Click the <b>Previous</b> button; you will see the previous page of login statistics.
Next	N/A	Click the <b>Next</b> button; you will see the next page of login statistics.
First	N/A	Click the <b>First</b> button; you will see the first page of login statistics.
Last	N/A	Click the <b>Last</b> button; you will see the last page of login statistics.
Export (.xml)	N/A	Click the <b>Export (.xml)</b> button to export the login statistics to xml file.
Export (.csv)	N/A	Click the <b>Export (.csv)</b> button to export the login statistics to csv file.
Refresh	N/A	Click the <b>Refresh</b> button to refresh the login statistics.

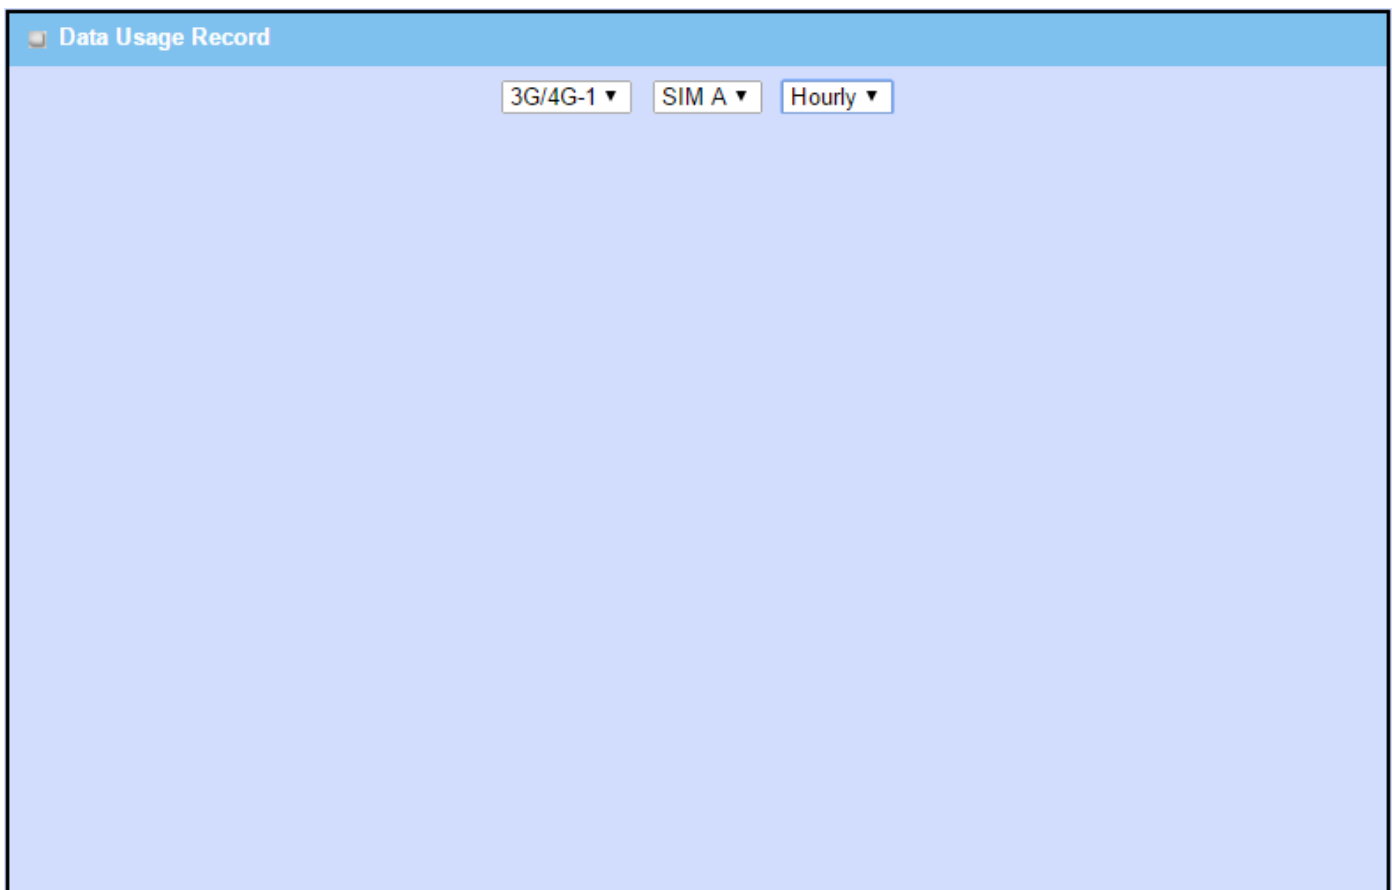

## M2M Cellular Gateway

---

### 8.5.4 Cellular Usage

Go to **Status > Statistics & Reports > Cellular Usage** tab.

**Cellular Usage** screen shows data usage statistics for the selected cellular interface. The cellular data usage can be accumulated per hour or per day.

## **Federal Communication Commission Interference Statement**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

## M2M Cellular Gateway

---

**FOR MOBILE DEVICE USAGE (>20cm/low power)**

**Radiation Exposure Statement:**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
