## **EXHIBIT 1**

### **GENERAL DESCRIPTION**

# INTERTEK TESTING SERVICES

---

## 1.0 **General Description**

### 1.1 Product Description

The 21-1856 is a 3 Channel Family Radio Service (FRS) transceiver (462.5625 MHz, FRS Channel 1, 462.5875 MHz, FRS Channel 2 and 467.5625 MHz, FRS Channel 8). The unit is powered from 6.0V, (4 x “AAA” batteries).

Transmitter Portion:

- i) Type of Emission: F3E
- ii) Frequency Range: 462.5625 MHz, 462.5875 MHz and 467.5625 MHz.

An audible ringer tone (more than 300 Hz) will be transmitted continuously for 6 seconds. After that, it will stop.

The brief circuit description is saved with filename: descri.pdf

## INTERTEK TESTING SERVICES

---

### 1.2 Related Submittal(s) Grants

This is an Application for Certification of the transmitter portion of a FRS Transceiver. The receiver section of the FRS Transceiver is subject to verification process.

### 1.3 Test Methodology

Radiated emission measurements were performed according to the procedures in ANSI C63.4 (1992). All measurement were performed in Open Area Test Sites. Preliminary scans were performed in the Open Area Test Sites only to determine worst case modes. For each scan, the procedure of maximizing emissions in Appendices D and E were followed. All Radiated tests were performed at an antenna the EUT distance of 3 meters, unless stated otherwise in the **“Justification Section”** of this Application.

### 1.4 Test Facility

The open area test site and conducted measurement facility used to collect the emission data is located at Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong. The test facility and site measurement data have been fully placed on file with the FCC.

**EXHIBIT 2**  
**SYSTEM TEST CONFIGURATION**

### 2.0 **System Test Configuration**

#### 2.1 Justification

The device was configured for testing in a typical fashion (as a customer would normally use it). The device was placed on a turntable, which enabled the engineer to maximize emissions through its placement in the three orthogonal axes. When the radiated emissions are measured.

The device was powered by 4 fully charged 1.5V "AAA" batteries. (6.0V dc)

The frequency range from 30 MHz to 10<sup>th</sup> harmonics was searched for spurious emissions from the device. Only those emissions reported were detected. All other emissions were at least 20 dB below the applicable limits.

## INTERTEK TESTING SERVICES

---

### 2.2 EUT Exercising Software

There was no special software to exercise the device. Once the unit is powered on, a signal is transmitted.

### 2.3 Special Accessories

No special accessories were necessary for compliance of this device.

### 2.4 Equipment Modification

Any modification installed previous to testing by RadioShack, A Division of Tandy Corp. will be incorporated in each production model sold/leased in the United States.

No modification were installed by Intertek Testing Services.

**EXHIBIT 3**

**RF POWER OUTPUT**

---

## INTERTEK TESTING SERVICES

---

### 3.0 **RF Power Output (Section 2.985(a))**

#### A. Equipment Used

Equipment	Brand Name	Model No.
Biconical Antenna	CDI	B300
Test receiver	Rohde & Schwarz	ESVS30
RF Filter	Tailithic	3VF
Tuned Dipole Antenna	CDI	Robert Antenna 4
Signal Generator	Maconi	2024

#### B. Testing Procedure

1. On a test site, the EUT shall be placed at 1.5m height on a turn table, and in the position closest to normal use as declared by the applicant.
2. The test antenna shall be oriented initially for vertical polarisation located 3m from EUT to correspond to the frequency of the transmitter.
3. The output of the test antenna shall be connected to the measuring receiver and the quasi-peak detector is used for the measurement.
4. The transmitter shall be switched on, if possible, without modulation and the measuring receiver shall be tuned to the frequency of the transmitter under test.
5. The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.

## **INTERTEK TESTING SERVICES**

---

6. The transmitter shall then be rotated through  $360^{\circ}$  in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
7. The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.
8. The maximum signal level detected by the measuring receiver shall be noted.
9. The transmitter shall be replaced by a tuned dipole (substitution antenna).
10. The substitution antenna shall be orientated for vertical polarisation and the length of the substitution antenna shall be adjusted to correspond to the frequency of the transmitter.
11. The substitution antenna shall be connected to a calibrated signal generator.
12. If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
13. The test antenna shall be raised and lowered through the specified range of height to ensure that the maximum signal is received.
14. The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuator setting of the measuring receiver.
15. The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.
16. The measurement shall be repeated with the test antenna and the substitution antenna orientated for horizontal polarisation.
17. The measure of the effective radiated power is the larger of the two levels recorded, at the input to the substitution antenna, corrected for gain of the substitution antenna if necessary.

21-1856 (3 Channel) TX**

**Transmission Power**

Channel	Frequency (M H z)	E ffectived R adiated Power (W )	L in it (W )	M argin (W )
1	462.5625	0.42	0.5	-0.08
2	462.5875	0.42	0.5	-0.08
8	467.5625	0.43	0.5	-0.07

Notes: Negative sign in the margin column shows the value below limits.

Test Engineer: H. Y. Vu

Date of Test: May 15, 2000

**EXHIBIT 4**

**MODULATION CHARACTERISTICS**

## INTERTEK TESTING SERVICES

---

### 4.0 **Modulation Characteristics**

In order to satisfy the 95.637(a) requirement, Modulation Frequency Response and Modulation Limit Characteristics are attached in Exhibit 4.1 & 4.2.

Plots for each tests are saved with filename: mfr.pdf and mlc.pdf

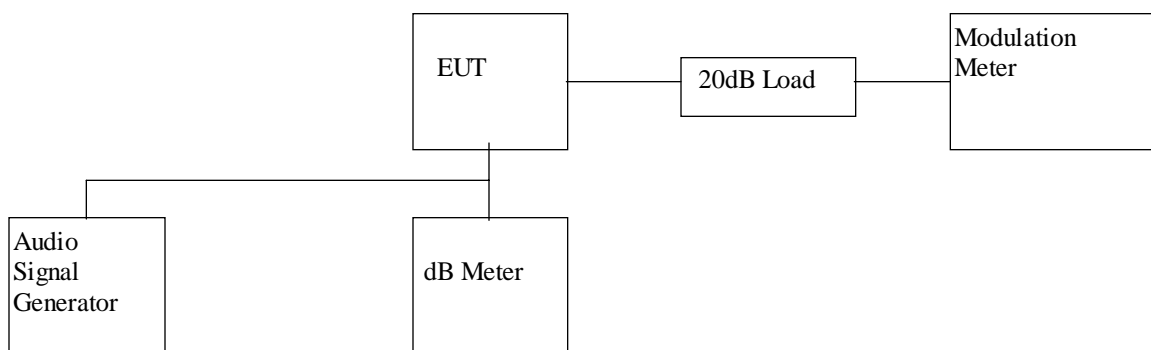

### 4.1 Modulation Frequency Response

#### A. Test Equipment

Equipment	Brand Name	Model No.
Audio Signal Generator	Leader	LFG-1300S
dB meter	Leader	LMV-182A
20 dB RF Load	Bird	8304-200-N
Modulation Meter	Marconi Instrument	2945

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Set the audio signal generator frequency to the sound pressure level 97.0dB SPL at the microphone of the EUT.
- 3) The frequency of the audio signal generator is changed from 300Hz to 5kHz.
- 4) Record the frequency deviation.

---

### 4.2 Modulation Limiting Characteristics (Section 2.987(b))

#### A. Test Equipment

Equipment	Brand Name	Model No.
Audio Signal Generator	Leader	LFG-1300S
20 dB RF Load	Bird	8304-200-N
Modulation Meter	Marconi	2950

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Set the frequency of the audio signal generator to 500Hz and adjust the level from 47dBSPL to 137dBSPL.
- 3) Record the maximum value of plus or minus peak frequency deviation.
- 4) Repeat the above procedure with frequency 1000Hz, 2500Hz & 3125Hz.

---

**EXHIBIT 5**

**OCCUPIED BANDWIDTH**

---

## INTERTEK TESTING SERVICES

---

### 5.0 Occupied Bandwidth (Section 95.633(c))

#### A. Test Equipment

Equipment	Brand Name	Model No.
Audio Signal Generator	Leader	LFG-1300S
dB meter	Leader	LMV-182A
20 dB RF Load	Bird	8304-200-N
Spectrum Analyzer	Hewlett Packard	8951EM

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Set the level of audio signal generator to obtain 16 dB greater than required for 50% modulation.
- 3) The occupied bandwidth is measured with the spectrum analyzer set at 5kHz/div scan and 10dB/div.

#### C. Test Result

The occupied Bandwidth is measured to be 10.05 kHz.

For the electronic filing, the bandwidth plot is saved with filename:  
bw.pdf

Test Engineer: H. Y. Vu

Date of Test: May 15, 2000

**EXHIBIT 6**

**SPURIOUS EMISSION**

### 6.0 **Spurious Emission (Section 95.635)**

In order to satisfy the 95.635 requirement, the spurious emission from the EUT are measured and shown in the Exhibit 6.1.

## INTERTEK TESTING SERVICES

---

### 6.1 **Field Strength of Spurious Radiation (Section 95.635)**

#### **A. Test Equipment**

<b>Equipment</b>	<b>Brand Name</b>	<b>Model No.</b>
Antenna	CDI	B100,B200,B300, Horn
Test receiver	Rohde & Schwarz	ESVS30
RF Filter	Tailithic	3VF

#### **B. Testing Procedure**

Radiated emission measurements were performed according to the procedures in ANSI C63.4(1992). All measurements were performed in Open Area Test Sites located at Roof Top of Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong.

## INTERTEK TESTING SERVICES

---

### C. Radiated Emission Configuration Photograph

#### Worst Case Radiated Emission

For electronic filing, the radiated emission configurations photograph is saved with filename: radiated1.pdf and radiated2.pdf

---

## INTERTEK TESTING SERVICES

---

### C. Test Result

**RadioShack, A Division of Tandy Corp.  
21-1856 (3 Channel) TX**

**Table 4(a)**

1. Unwanted emission from CARRIER  $\pm 6.25\text{kHz}$  to Carrier  $\pm 31.25\text{kHz}$

(Refer to the plots which is saved with filename: spurious.pdf)

Region	Unwanted emission	
	Channel 1	Channel 8
CARRIER $\pm 6.25\text{kHz}$ to $\pm 12.5\text{kHz}$	<25dB	<25dB
CARRIER $\pm 12.5\text{kHz}$ to $\pm 31.25\text{kHz}$	<35dB	<35dB

Frequency Counter	Phillips	PM6668

#### B. Testing Procedure

- 1) Set-up the test equipment in the following configuration:

- 2) Vary the level of regulated power supply to [the manufacturer specified battery end point](#) of the EUT.
- 3) Measure the channel frequency from channel [1 to 14](#) in MHz.

---

## INTERTEK TESTING SERVICES

---

### C. Test Result

**Table 7**

**RadioShack, A Division of Tandy Corp.  
21-1856 (3 Channel) TX**

#### **Frequency Deviation with Voltage Variation**

The manufacturer specified battery end point 4.0V

Channel	Frequency (M H z)	M easured Frequency (M H z)	Tolerance (% )
1	462.5625	462.562600	0.000022
8	467.5625	467.562615	0.000026

**EXHIBIT 8**  
**TECHNICAL SPECIFICATIONS**

**8.0 Technical Specifications**

### 8.1 Block Diagram

For electronic filing, the block diagram of the FRS is saved with filename:  
block.pdf

Figure 8.1 Block Diagram

### 8.2 Schematic Diagram

For electronic filing, the schematic diagram of the FRS is saved with filename:  
circuit.pdf

**PRODUCT LABELLING**

9.0 **Product Labelling**

### 9.1 Label Artwork & Location

Figure 9.1 Label Artwork & Location

An engineering drawing of the label which will be permanently affixed to the unit. For electronic filing, the label artwork & location are saved with filename: label.pdf

**EXHIBIT 10**  
**PHOTOGRAPHS**

### 10.0 Equipment Photographs

For electronic filing, photographs of the tested EUT are saved with filename: ophoto1.jpg to [ophoto2.jpg](#) for external photo and iphoto1.jpg to [iphoto3.jpg](#) for internal photo.

**EXHIBIT 11**  
**INSTRUCTION MANUAL**

### 11.0 **Instruction Manual**

This manual will be provided to the end-user with each unit sold/leased in the United States.

For electronic filing, a preliminary copy of the Instruction Manual is saved with filename: manual.pdf
