

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On the left, a piece of electronic equipment (likely a spectrum analyzer or noise meter) sits on a wooden bench. A red cable connects it to a power supply unit on the floor. To the right, a black digital display unit stands on a wooden table. The background is a plain wall with a power outlet.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing a radiation emission test setup. A black digital display unit is placed on a white foam block. In the foreground, a metal frame structure is visible. The background consists of a wall covered with white, square-shaped electromagnetic interference (EMI) shields. The floor is a polished metal surface with yellow and black safety markings.

Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test setup for the 30MHz to 1GHz range. A black cylindrical antenna is mounted on a white, U-shaped concrete block. The setup is positioned in front of a wall covered with white, square-shaped electromagnetic absorbers. To the right, a metal frame with several vertical rods is visible. The floor is a light-colored concrete.
Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test setup for the 1GHz to 18GHz range. A white, rectangular object is mounted on a white, U-shaped concrete block. The setup is positioned in front of a wall covered with white, square-shaped electromagnetic absorbers. To the right, a red antenna is visible. The floor is a light-colored concrete.

**Radiation Emission Test
Setup (Above 18GHz)**
