

## FCC ID: 2ARUDSOCL500TWSL

According to KDB 447498 D01 General RF Exposure Guidance v06, section 4.3.1

At 100 MHz to 6 GHz and for test separation distances ≤ 50mm, the SAR test exclusion threshold is determined according to the following

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)]  $x [\sqrt{f(GHz)}] \le 3.0$ 

## 1. SAR test exclusion threshold

Frequency: 2 480 MHz (min. separation distances = 5 mm)

SAR test exclusion thresholds (5 mm) =  $3 \times 5 / (\sqrt{2.480}) = 9.525 \text{ mW}$ 

Test mode	Max. Tune-up Tolerance (mW)	SAR Test Exclusion Thresholds (5mm) (mW)
Classic BT	3.00	9.525

Calculation value : 3.00 (mW) / 5 (mm) x  $\sqrt{2.480}$  = 0.945

So, Calculation value ≤ 3.0

Remark:

-For Classic BT Max. conducted power is 2.82 (mW), so 3.00 (mW) was calculated.

-When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
