

Report No.SH17020004W01

FCC RF TEST REPORT

Issued to

JASCO PRODUCTS COMPANY

For

SMART LED LAMP

Model Name : RGB/24/12/18/2; RGB/36/18/18/2
Trade Name : enbrighten
Brand Name : enbrighten
Standard : 47 CFR Part 15, Subpart C
ANSI C63.10-2013
FCC ID : QOBRGBXYZA
Test date : Mar.20, 2017 - Apr.12, 2017
Issue date : Apr.12, 2017

Tested by An Peng

Approved by Gu Ting'ing

Review by Xia Dong Wei

The report refers only to the sample tested and does not apply to the bulk. This report is issued in confidence to the client and it will be strictly treated as such by the Shanghai Skylabs Co., Ltd. It may not be reproduced in its entirety or in part and it may not be used for advertising. The client to whom the report is issued may, however, show or send it or a certified copy thereof prepared by the Shanghai Skylabs Co., Ltd. to his customer, supplier or other persons directly concerned. Shanghai Skylabs Co., Ltd. will not, without the consent of the client, enter into any discussion of correspondence with any third party concerning the contents of the report. In the event of the improper use of the report, Shanghai Skylabs Co., Ltd. reserves the rights to withdraw it and to adopt any other remedies which may be appropriate.

1. General Information

1.1 Applicant

JASCO PRODUCTS COMPANY

10 E Memorial Road, Oklahoma City, OK 73114, USA

1.2 Manufacturer

Shangyu Shunhe Electric Appliance for Illumination Co., LTD

Xiaoyue Town, Shangyu City, Zhejiang Province of China

1.3 Description of EUT

EUT Name.....: SMART LED LAMP
Model Name.....: RGB/24/12/18/2;RGB/36/18/18/2
Brand Name.....: enbrighten
Trade Name: enbrighten
Hardware Version.....: V0
Software Version: V0
Modulation Type: GFSK
Frequency: Low: 2421MHz,Middle: 2442MHz,High: 2464MHz
Channel Number.....: 3
Antenna Type.....: PCB metal antenna
Antenna Gain.....: 2dBi

The remoter

Voltage: DC 3V

The lamp string

Voltage: 120ACV

Frequency.....: 60Hz

Rating current.....: 105mA;145mA

Note:

- 1) The SMART LED LAMP consists of a lamp string and a remoter.
- 2) The lamp string has two models (RGB/24/12/18/2 and RGB/36/18/18/2).
- 3) The remoter operates at 2.4GHz ISM band; it only has three channels low(2421MHz),middle (2442MHz), high (2464MHz).it can be used to control the SMART LED LAMP turning on or off, and realizes other functions.
- 4) For more detailed description, please refer to Specification or User's Manual supplied by the applicant and/or manufacture.

2. Facilities and Accreditations

2.1 Test Facility

Shanghai Skylabs Co., Ltd. (Skylabs Laboratory) is a third party testing organization accredited by China National Accreditation Service for Conformity Assessment (CNAS) according to ISO/IEC 17025. The accreditation certificate number is L6644. FCC registered number is 196218. IC registered number is 21609

A 9*6*6(m) full/semi-anechoic chamber was used for the radiated emissions test.

2.2 Environmental Conditions

Ambient temperature: 15 ~ 35°C

Relative humidity: 30 ~ 60%

Atmosphere pressure: 86 ~ 106kPa

2.3 Measurement Uncertainty

The uncertainty is calculated using the methods suggested in the "Guide to the Expression of Uncertainty in Measurement" (GUM) published by ISO.

Uncertainty of Conducted Emission: $\pm 1.76\text{dB}$

Uncertainty of Radiated Emission: $\pm 3.16\text{dB}$

2.4 List of Equipments Used

Description	Manufacturer	Model	Serial No.	Cal. Date	Cal. Due

RF Cable	(n.a.)	0-25G	(n.a.)	(n.a.)	(n.a.)

Note:

Equipments listed above have been calibrated and are in the period of validation.

3. Test Standards and Results

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

FCC Part 15 Subpart C §15.247

ANSI C63.10-2013

558074 D01 DTS Meas Guidance v04

Note:

(1)All test items were verified and recorded according to the standards and without any deviation during the test.

(2)This EUT has also been tested and complied with the requirements of FCC Part 15, Subpart C, recorded in a separate test report.

Test items and the results

A SMART LED LAMP comprises a remoter and a lamp string, one transmitter is located in the remoter. This transmitter is tested solely with following testing item from 1~5 and 8 in blow table by conducted method. Test item 6~7 is for lamp string and remoter.

Model RGB/24/12/18/2 and RGB/36/18/18/2 has same remoter and different lamp string, so testing solution in this report is that:

A group of conducted testing data for a remoter is recorded, but CE and RE testing data for different models SMART LED LAMP is recorded respectively.

No.	FCC Rules	Description	Result
1	15.203	Antenna Requirement	Pass
2	15.247(b)	Peak Output power	Pass

8	15.247(e)	Power Spectral Density (PSD)	Pass

4. 47 CFR Part 15C

4.1 Antenna requirement

4.1.1 Applicable standard

According to FCC 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.

4.1.2 Result: Compliant

The EUT has a permanently and irreplaceable attached antenna. Please refer to the EUT internal photos.

5. Test Result

5.1 Peak Output Power

5.1.1 Requirement

According to FCC section 15.247(b) (3), for systems using digital modulation in the 902-928MHz, 2400-2483.5MHz, and 5725-5850MHz bands: The maximum peak conducted output power of the intentional radiator shall not exceed 1 Watt.

5.1.2 Test Description

A. Test setup

The EUT (Equipment under test) is coupled to the SA; the RF load attached to the EUT antenna terminal is 50Ohm; the path loss as the factor is calibrated to correct the reading, all test result in SA.

Instrument setting:

- a) Set the RBW =1MHz
- b) Set t VBW=3 MHz
- c) Set the span =3 MHz
- d) Sweep time =auto couple
- e) Detector =peak
- f) Trace mode =max hold
- g) Allow trace to fully stabilize
- h) Use peak marker function to determine the peak amplitude level.

Measurement procedure:

- 1. Place the EUT on the table and remove the antenna from the EUT;
- 2. Connect to the SA through RF cable with 50 Ohm impedance and set it work at continuous transmitting mode;
- 3. Allow the trace to stabilize and record the maximum reading;
- 4. Repeat the above procedures, until all the channels tested.

5.1.3 Test Result

The low, middle and high channels are selected to perform testing to verify the conducted RF output peak power of the EUT. (Duty cycle > 98%)

A. Test Verdict

Channel	Frequency (MHz)	Measured Output Peak Power		Limit		Verdict
		dBm	W	dBm	W	
Low	2421	8.63	0.00733	30	1	Pass
Middle	2442	8.79	0.00757			Pass
High	2464	8.46	0.00701			Pass

B. Test Plots

Date: 20.MAR.2017 11:04:37

(Peak Output Power_low channel at 2421MHz)

Date: 20.MAR.2017 11:03:01

(Peak Output Power_middle channel at 2442MHz)

Date: 20.MAR.2017 11:03:44

(Peak Output Power_high channel at 2464MHz)

5.2 6dB Bandwidth

5.2.1 Requirement

According to FCC section 15.247(a) (2), Systems using digital modulation techniques may operate in the 902 - 928 MHz, 2400 - 2483.5 MHz, and 5725 - 5850 MHz bands. The minimum 6 dB bandwidth shall be at least 500 kHz.

5.2.2 Test Description

Instrument setting:

- a) Set RBW = 100 kHz
- b) Set the video bandwidth (VBW) ≥ 3 RBW
- c) Detector=Peak
- d) Trace mode= max hold
- e) Sweep =auto couple
- f) Allow the trace to stabilize
- g) Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

Measurement procedure:

1. Place the EUT on the table and remove the antenna from the EUT;
2. Connect to the SA through RF cable with 50 Ohm impedance and set it work at continuous transmitting mode;
3. Mark the peak frequency and -6dB(upper and lower frequencies);
4. Allow the trace to stabilize, record the SA reading;
5. Repeat the above procedures, until all the channels tested.

5.2.3 Test Result

The low, middle and high channels are tested to record the 6 dB bandwidth of the EUT.

A. Test Verdict

Channel	Frequency (MHz)	6dB Bandwidth (kHz)	Refer to plot	Limit (KHz)	Result
Low	2421	951.923	Plot A	≥ 500	Pass
Middle	2442	817.307	Plot B		Pass
High	2464	745.192	Plot C		Pass

Date: 20.MAR.2017 10:59:58

Plot C

5.3 Conducted Spurious Emissions and Band Edge

5.3.1 Requirement

According to FCC section 15.247(d), in any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.

5.3.2 Test Description

Instrument setting:

- a) Set the center frequency and span to encompass frequency range to be measured
- b) Set the RBW = 100 kHz
- c) Set the VBW = 300 kHz
- d) Detector = peak
- e) Sweep time = auto couple
- f) Trace mode = max hold
- g) Allow trace to fully stabilize
- h) Use the peak marker function to determine the maximum amplitude level.

Measurement procedure:

1. Place the EUT on the table and remove the antenna from the EUT;
2. Connect to the SA through RF cable with 50 Ohm impedance and set it work at continuous transmitting mode;
3. Allow the trace to stabilize, mark the peak frequency and record the SA reading;
5. Repeat above procedures, until all the channels tested.

5.3.3 Test Result

The EUT operates at hopping-off test mode. The measurement frequency range is from 30MHz to the 10th harmonic of the fundamental frequency. The low, middle and high channels are tested to verify the spurious emissions.

A. Test Verdict

Conducted Spurious Emissions:

Channel	Frequency (MHz)	Measured max out of band emission(dBm)	Refer to plot	Limit(dBm)		Result
				Carrier level	Calculated -20dBc limit	
Low	2421	-25.73	Plot A	8.64	-11.36	Pass
Middle	2442	-26.49	Plot B	8.55	-11.45	Pass
High	2464	-27.06	Plot C	8.19	-11.81	Pass

Band edge:

Channel	Frequency(MHz)	Amplitude(dBm)	Refer to plot	Result
Low	2420.913	8.60	Plot D	Pass

5.4 Power Spectral Density (PSD)

5.4.1 Requirement

According to FCC section 15.247(e), the same method of determining the conducted output power shall be used to determine the power spectral density. If a peak output power is measured, then a peak power spectral density measurement is required. If an average output power is measured, then an average power spectral density measurement should be used.

5.4.2 Test Description

Instrument setting:

- Set analyzer center frequency to DTS channel center frequency
- Set the span = 3MHz
- Set the RBW to $3\text{ kHz} \leq \text{RBW} \leq 100\text{ kHz}$
- Set the VBW $\geq 3\text{ RBW}$
- Detector = peak
- Sweep time = auto couple
- Trace mode = max hold
- Allow trace to fully stabilize
- Use the peak marker function to determine the maximum amplitude level within the RBW
- If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.

Measurement procedure:

- Place the EUT on the table and set it work at continuous transmitting mode;
- Remove the antenna from the EUT and the connect to the SA through RF cable with 50 Ohm impedance;
- Allow the trace to stabilize, mark the peak amplitude level, record the SA reading;
- Repeat above procedures, until all the channels tested.

5.4.3 Test Result

Date: 20.MAR.2017 11:36:40

Plot C

5.5 Restricted Frequency Bands

5.5.1 Requirement

According to FCC section 15.247(d), in any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, , In addition, radiated emissions which fall in the restricted bands, as defined in 15.205(a), must also comply with the radiated emission limits specified in 15.209(a).

5.5.2 Test Description

The EUT is located in a 3m Semi-Anechoic Chamber; the antenna factors, cable loss and so on of the site as factors are calculated to correct the reading.

For the Test Antenna:

Test Antenna is 3m away from the EUT. Test Antenna height is varied from 1m to 4m above the ground to determine the maximum value of the field strength.

Instrument setting:

- Set the center frequency and span to encompass frequency range to be measured
- Set the RBW = 1MHz
- Set the VBW = 3MHz
- Detector = peak
- Sweep time = auto couple
- Trace mode = max hold
- Allow trace to fully stabilize
- Use the peak marker function to determine the maximum amplitude level.

Measurement procedure:

1. Place the EUT on a 0.8m turn table above ground plane and set it work at continuous transmitting mode;
2. Set the EUT 3m away from the antenna which varied from 1-4m to find the highest emissions;
3. Let the turn table rotate 360 degrees to find the position of maximum emission level;
4. And each emission was to be maximized by changing the polarization of antenna both horizontal and vertical;
5. Record the maximum emission points;
6. Repeat the above procedures, until all the channels tested.

5.5.3 Test Result

The lowest and highest channels are tested to verify the restricted frequency bands.

The measurement results are obtained as below:

$$E \text{ [dBV/m]} = UR + AT + A\text{Factor [dB]}; AT = LCable \text{ loss [dB]} - G\text{preamp [dB]}$$

AT: Total correction Factor except Antenna

UR: Receiver Reading

Gpreamp: Preamplifier Gain

AFactor: Antenna Factor at 3m

Note:

Restricted Frequency Bands were performed when antenna was at vertical and horizontal polarity, and only the worse test condition (vertical) was recorded in this test report.

The lowest and highest channels are tested to verify the restricted frequency bands.

A. Test Verdict

Channel	Frequency (MHz)	Detector PK/AV	Max. Emission (dBuV/m)	Limit (dBuV/m)	Plot	Result
Low	2389.70	PK	44.79	74	Plot A	Pass
Low	2384.59	AV	33.19	54		Pass
High	2484.02	PK	48.26	74	Plot B	Pass
High	2485.17	AV	36.08	54		Pass

B. Test Plots

Plot A

Plot B

5.6 Conducted Emission

5.6.1 Requirement

According to FCC section 15.207, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency within the band 150kHz to 30MHz shall not exceed the limits in the following table, as measured using a 50 μ H/50 Ω line impedance stabilization network (LISN).

Frequency range (MHz)	Conducted Limit (dB μ V)	
	Quai-peak	Average
0.15 - 0.50	66 to 56	56 to 46
0.50 - 5	56	46
5 - 30	60	50

Note:

(a) The lower limit shall apply at the band edges.

(b) The limit decreases linearly with the logarithm of the frequency in the range 0.15 - 0.50MHz.

5.6.2 Test Description

Instruments setting:

- Set the span = 0.15-30MHz
- Set the RBW = 9kHz
- Set the VBW $\geq$ 3RBW
- Detector = quai-peak & average
- Sweep time = auto couple
- Allow trace to fully stabilize
- Mark suspicious frequencies points

Measurements procedure:

- The EUT was placed upon a non-metallic table 0.8m above the horizontal metal reference ground

plane and 0.4m away from the conducted wall;

2. The EUT was connected to LISN and LISN was connected to reference ground plane. EUT was 80cm from LISN. Power supplier is setting to 120V/60Hz, let the EUT work in the test mode and test it;

3. Emissions were measured on each current carrying line of the EUT using an EMI test receiver connected to the LISN powering the EUT;

4. The frequency range from 150kHz to 30MHz was searched. The test data of the worst conditions were recorded. Emission levels under limit 20dB were not recorded.

5.6.3 Test result

Base on client request, the different models of lamps string are tested but only the worst test data of the worst mode is recorded in this report.

Test verdict recorded for suspicious points:

5.7 Radiated Emission

5.7.1 Requirement

According to FCC section 15.247(c), radiated emission outside the frequency band attenuation below the general limits specified in FCC section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in FCC section 15.205(a), must also comply with the radiated emission limits specified in FCC section 15.209(a).

According to FCC section 15.209 (a), except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table.

Frequency (MHz)	Field Strength ($\mu\text{V/m}$)	Measurement Distance (m)	Limit($\text{dB}\mu\text{V/m}$)	Detector
0.009-0.490	2400/F(kHz)	300	/	/
0.490-1.705	24000/F(kHz)	30	/	/
1.705-30	30	30	/	/
30 - 88	100	3	40	QP
88 - 216	150	3	43.5	QP
216 - 960	200	3	46	QP
960 - 1000	500	3	54	QP
Above 1000	500	3	54	AV

In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), also should comply with the radiated emission limits specified in Section 15.209(a)(above table)

5.7.2 Test setup

Radiated Emissions below 30MHz

Radiated Emissions 30-1000MHz

Radiated Emissions above 1000MHz

The test site semi-anechoic chamber has met the requirement of NSA tolerance 4dB according to the standards: ANSI C63.10-2013. Below 1GHz, the EUT was set-up on insulator 80cm above the ground plane. Above 1GHz, the EUT was set-up on insulator 150cm above the ground plane. The set-up and test methods were according to ANSI C63.10.

The EUT is located in a 3m Semi-Anechoic Chamber; the antenna factors, cable loss and so on of the site as factors are calculated to correct the reading.

For the Test Antenna: In the frequency range above 30MHz, Bi-Log Test Antenna (30MHz to 1GHz) and Horn Test Antenna (above 1GHz) are used.

Test procedure and instrument setting:

- 1) The EUT is placed on a turntable, which is 0.8m or 1.5m above the ground plane;
- 2) The azimuth range of turntable was 0° to 360°, the receive antenna has two polarizations horizontal and vertical;
- 3) Test Antenna is 3m away from the EUT. Test Antenna height is varied from 1m to 4m above the ground to determine the maximum value of the field strength;
- 4) SA setting as below
For 30MHz to 1GHz, RBW/VBW=100kHz/300 kHz, sweep =auto
For above 1GHz, RBW/VBW=1MHz/2 kHz, sweep =auto
- 5) Repeat the above procedures, until all the channels tested. And the worst-case data was presented.

5.7.3 Test Result

A. Test Result for 9kHz ~ 30MHz

Frequency (MHz)	Level (dBuV)	Over Limit (dB)	Limit Line (dBuV)	Remark
--	--	20	--	See Note

Note:

- a) The amplitude of spurious emissions that are attenuated by more than 20dB below the permissible value has no need to be reported;
- b) Distance extrapolation factor = $40 \log (\text{specific distance} / \text{test distance})$ (dB);
- c) Limit line = specific limits (dBuV) + distance extrapolation factor.

Radiated emissions of EUT are tested, which contains lamp string and remoter. The same remoter and different lamp string with model RGB/24/12/18/2 and RGB/36/18/18/2 all tested, testing data for different models is recorded respectively.

Table 1: Radiated emissions for remoter and lamp string with model of RGB/24/12/18/2

Frequency (MHz)	Level (dBuV)	Limit Line (dBuV)	Margin (dB)	Antenna Polarization	Detector	Result
47.49	21.42	40.00	18.58	Horizontal	QP	PASS
236.65	20.12	46.00	25.88	Horizontal	QP	PASS

7322.43	51.18	74.00	22.82	Vertical	Peak	PASS

Note:

- 1) Radiated emissions measured in frequency above 1GHz were made with an instrument using peak/average detector mode.*
- 2) All working modes and different channels are measured, and only the worst -case data is recorded in the report.*
