Manufacturer	Telit Communications S.p.A.
Manufacturer Address	Viale Stazione di Prosecco 5/b, 34010, Trieste, Italy
Product Type	Wireless module
Trade Name	Telit
Model Number	HE920-NA
CIIPC Description	[Hardware changes] From version 1.00 to 1.10 For HE920-NA, three duplexers respectively for WCDMA FDD II, IV, V have been replaced with smaller ones and several related matching values have been changed. For both HE920-NA, WCDMA Rx diversity antenna switch has been replaced with smaller one from same vendor. For both HE920-NA, PCB has been modified just to reflect the changes described above. GSM and all other parts are 100% same as before. [Software changes] From version 14.10.001 to 14.12.000-B028 For HE920-NA, Qualcomm MDM6200 baseline upgraded to 3.5. Captured differences below have nothing to do with protocols. For HE920-NA, GPRS and EGPRS multi slot class changed from 33 to 10 For HE920-NA, DTM mode class changed from 11 to 9 For HE920-NA, GPS disabled All other changes are related to AT command interfaces and have no influences on previous certifications.

The above equipment was tested by A Test Lab Techno Corp. For compliance with the requirements set forth in 47 CFR § 2.1091 & 47 CFR § 1.1310. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties

2. Human Exposure Assessment

Due to the design and installation of this product, it is not possible to conduct SAR evaluation. This is because client either manufactures or supplies the antenna(s) that will be used in the installation of this product. Therefore, this product will be evaluated as a mobile device per 47 CFR §1.1310 titled "Radiofrequency radiation exposure limits", generally referred to as MPE limits.

In 47 CFR § 2.1091, paragraph (b) defines a mobile device as "a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 cm is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. " This product is intended to be installed into a vehicle such that the unit is physically secured at one location. In the installation guide supplied with the product,

Client has made the following statement: "IMPORTANT: To meet the FCC's RF Exposure Guidelines, the antenna should be installed so there is at least 20 cm of separation between the body of the user and nearby persons and the antenna". Based on the installation of the transceiver and the antenna, the transmitters radiating structure is more than 20 cm from the user. Thus, this product is a "mobile device" as defined in section § 2.1091 paragraph (b).

Exposure evaluation

Equation from page 18 of OET Bulletin 65, Edition 97-01

$$S = \frac{PG}{4\pi R^2}$$

$$G_{max} = \frac{4\pi R^2}{P_{av}} S_{limit}$$

Where

S: power density

P: power input to the antenna

G: power gain of the antenna in the direction of interest relative to an isotropic radiator.

R: distance to the center of radiation of the antenna.

Summary Gain	
Band	Antenna Gain Evaluation(dBi)
GSM/GPRS/EGPRS 850/WCDMA Band V	7.43
GSM/GPRS/EGPRS 1900/WCDMA Band II	3.50
WCDMA Band IV	2.88

Note: Except meet limit of EIRP and MPE, the evaluation gains also meet other test with RSE and CSE. Therefore it chose available evaluation gain on the report.

Please see the summary gain, that actual gain should be not more than evaluation gain.

The antenna gain which is designated by customer and it also lower than evaluation gain therefore use it to calculate MPE on the report.
