

Welcome to use products of EPOT

Operation Method

Tile the mouse pad on the desk and connected to the changer with line (recommend connecting to changer with 5V~12V. But not recommend connecting to the USB of a computer, because of the low voltage), then you can put the mobile phone on the charging sign area to charge it. And you can use the mouse on the other side of the pad as usual.

Function description

A. LED indicator description

LED indicator status definition:

POWER ON: The blue and green light flashes 2 times, and then the blue light is long to enter the standby state.

Charging: The charging state green LED is on.

FOD Detection: the foreign object (1 yuan coin) is placed in the center, and the center, and the green light flashes quickly until the foreign object is removed

1、Parameters Values

Project	
wireless charging standard	Qi
Input	12V 1.5A/9V 2A/5V 2A~3A
Output	15W/10W/7.5W/5W 5W output when input voltage is 5V
Charge efficiency	70%~80%
Working distance	3mm~5mm
Defensive function	Short circuit protection, Foreign object detection
Product compatibility	This product is only suitable for mobile phones with wireless charging function, or mobile phones with wireless charging receiver

2、Temperature rise

The surface temperature rise of the shell shall not exceed 45°C. The maximum temperature of each component of the power supply during normal operation shall comply with the usage specification of component derating.

3. Flammability of materials

The material used for the power supply housing shall minimize ignition hazard and ignition delay to V-1 or better. Printed boards and components shall be V-1 or better

4. Storage

Products should be stored in an indoor warehouse with a

temperature of 25 degrees and humidity of no more than 75% to minimize the impact on products

5. Transportation

The products should be rainproof and waterproof during transportation to prevent them from being stacked in high temperature environment for a long time

FCC Warning Statement

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
 - Increase the separation between the equipment and receiver.
 - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
 - Consult the dealer or an experienced radio/TV technician for help.
- This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

FCC Radiation Exposure Statement

The antennas used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located for operating in conjunction with any other antenna or transmitter.

Note: All packaging information, product features and specifications are subject to change at any time without further notice.
