# APPENDIX C DESCRIPTION OF SAR MEASUREMENT SYSTEM

#### Probe Positioning System

The measurements were performed with the state-of-the-art automated near-field scanning system **DASY5 Version 52** from Schmid & Partner Engineering AG (SPEAG). The DASY5 fully complies with the IEEE 1528 and EN62209-1 and EN62209-2 SAR measurement requirements.

#### E-Field Probe Type and Performance

The SAR measurements were conducted with SPEAG dosimetric probe EX3DV4 Serial: 3657. Please refer to appendix D for detailed information.

#### Data Acquisition Electronics

The data acquisition electronics (DAE3) consists of a highly sensitive electrometer-grade preamplifier with autozeroing, a channel and gain switching multiplexer, a fast 16 bit AD-converter and a command decoder and control logic unit. The input impedance of the DAE3 box is 200 M $\Omega$ ; the inputs are symmetrical and floating. Common mode rejection is above 80dB.Transmission to the PC-card is accomplished through an optical downlink for data and status information as well as an optical uplink for commands and the clock.

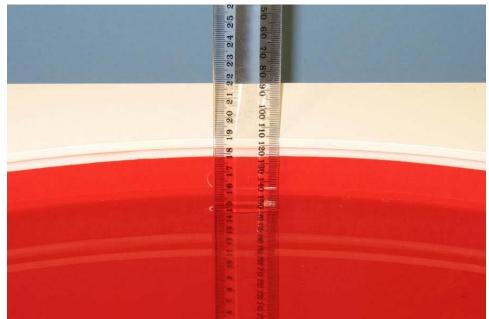

The mechanical probe-mounting device includes two different sensor systems for frontal and sideways probe contacts. They are used for mechanical surface detection and probe collision detection.

#### **Device Holder for Laptops and P 10.1 Phantom**

A low loss clamp was used to position the DUT underneath the phantom surface. *Refer to Appendix A for photographs of device positioning* 

#### Liquid Depth 15cm

During the SAR measurement process the liquid level was maintained to a level of 15cm with a tolerance of 0.5cm.

Photograph Number 18.

Accredited for compliance with ISO/IEC 17025. The results of the test, calibrations and/or measurement included in this document are traceable to Australian/national standards. NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, calibration and inspection reports.

#### **Phantom Properties**

The phantom used during the testing complies with the IEEE 1528 and EN62209-1 and EN62209-2 SAR measurement requirements.

| Table 17 Phantom Properties |                               |
|-----------------------------|-------------------------------|
| Phantom Properties          |                               |
| Depth of Phantom            | 19 cm                         |
| Width of flat section       | 40 cm                         |
| Length of flat section      | 60 cm                         |
| Thickness of flat section   | 2.0mm +/-0.2mm (flat section) |
| Dielectric Constant         | <5.0                          |
| Loss Tangent                | <0.05                         |

#### T-11-47 DL ... \_

Accredited for compliance with ISO/IEC 17025. The results of the test, calibrations and/or measurement included in this document are traceable to Australian/national standards. NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, calibration and inspection reports.

### **Tissue Material Properties**

The dielectric parameters of the brain simulating liquid were measured prior to SAR assessment using the HP85070A dielectric probe kit and HP8753ES Network Analyser. The actual dielectric parameters are shown in the following table.

| Frequency<br>Band | ∈r<br>(target) | σ<br>(target) | ρ<br><b>kg/m</b> ³ |
|-------------------|----------------|---------------|--------------------|
| 5180 MHz<br>Body  | 49.0 ±5%       | $5.3\pm5\%$   | 1000               |
| 5240 MHz<br>Body  | 48.9 ±5%       | 5.4 ±5%       | 1000               |
| 5260 MHz<br>Body  | 48.9 ±5%       | 5.4 ±5%       | 1000               |
| 5320 MHz<br>Body  | 48.8 ±5%       | 5.4 ±5%       | 1000               |

## Table 18 Target Body Simulating Liquid Dielectric Values for 5200MHz range

| Table 19 Target Body Simulating Liquid Dielectric Values fo | r 5600MHz range |
|---|-----------------|
|---|-----------------|

| Frequency<br>Band | ∈r<br>(target) | σ<br>(target) | ρ<br>kg/m³ |
|-------------------|----------------|---------------|------------|
| 5520 MHz<br>Body  | 48.6 ±5%       | 5.6 ±5%       | 1000       |
| 5580 MHz<br>Body  | 48.5 ±5%       | 5.77 ±5%      | 1000       |
| 5620 MHz<br>Body  | 48.5 ±5%       | 5.77 ±5%      | 1000       |
| 5680 MHz<br>Body  | 48.4 ±5%       | 5.9 ±5%       | 1000       |

| Table 20 Target Body Simulating Liquid Dielectric Values for 5800MHz range |
|--|
|--|

| Frequency<br>Band | ∈r<br>(target) | σ<br>(target) | ρ<br>kg/m³ |
|-------------------|----------------|---------------|------------|
| 5745 MHz<br>Body  | 48.3 ±5%       | 5.9 ±5%       | 1000       |
| 5785 MHz<br>Body  | 48.2 ±5%       | 6.0 ±5%       | 1000       |
| 5825 MHz<br>Body  | 48.2 ±5%       | 6.0 ±5%       | 1000       |

NOTE: The muscle liquid parameters were within the required tolerances of  $\pm 5\%$  for  $\sigma$  for  $\in r$ 

#### Simulated Tissue Composition Used for SAR Test

The tissue simulating liquids are created prior to the SAR evaluation and often require slight modification each day to obtain the correct dielectric parameters.

## Table 21 Tissue Type: Muscle @ 5600MHz

EMCT Liquid, Volume of Liquid: 60 Litres

| Approximate<br>Composition | % By Weight |
|----------------------------|-------------|
| Distilled Water            | 77.5        |
| Salt                       | 0.3         |
| Triton X-100               | 22.2        |
