**Client**      **H-CT (Dymstec)**

**CALIBRATION CERTIFICATE**

**Object(s)**      **D450V2 - SN:1007**

**Calibration procedure(s)**      **QA CAL-15.v2  
Calibration procedure for dipole validation kits below 800 MHz**

**Calibration date**      **May 29, 2004**

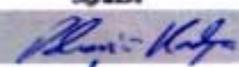

**Condition of the calibrated item**      **In Tolerance (according to the specific calibration document)**

This calibration statement documents traceability of M&TE used in the calibration procedures and conformity of the procedures with the ISO/IEC 17025 International standard.

All calibrations have been conducted in the closed laboratory facility: environment temperature 22 +/- 2 degrees Celsius and humidity < 75%.

Calibration Equipment used (M&TE critical for calibration)

## Dipole Validation Kit

Type: D450V2

Serial: 1007

Manufactured: July 1, 2002

Calibrated: May 29, 2004

D450V2- SN:1007

## 1. Measurement Conditions

The measurements were performed in the 6mm thick flat phantom filled with head simulating liquid of the following electrical parameters at 450 MHz:

Relative Dielectricity	<b>45.1</b>	$\pm 5\%$
Conductivity	<b>0.85 mho/m</b>	$\pm 5\%$

The DASY4 System with a dosimetric E-field probe ET3DV6 (SN:1507, Conversion factor 6.45 at 450 MHz) was used for the measurements.

The dipole was mounted on the small tripod so that the dipole feedpoint was positioned below the center of the flat phantom and the dipole was oriented parallel to the longer side of the phantom. The standard measuring distance was 15mm from dipole center to the liquid surface including the 6mm thick phantom shell. The included distance spacer was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 15mm was aligned with the dipole. The 7x7x7 fine cube was chosen for cube integration.

The dipole input power (forward power) was 398 mW  $\pm 3\%$ . The results are normalized to 1W input power.

## 2. SAR Measurement with DASY System

Standard SAR-measurements were performed according to the measurement conditions described in section 1. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the advanced extrapolation are:

averaged over 1 cm <sup>3</sup> (1 g) of tissue:	<b>5.25 mW/g</b> $\pm 20.7\%$ (k=2) <sup>1</sup>
averaged over 10 cm <sup>3</sup> (10 g) of tissue:	<b>3.49 mW/g</b> $\pm 20.2\%$ (k=2) <sup>1</sup>
