# 1. RF Exposure Requirements

### 1.1 General Information

**Client Information** 

Applicant: Xiamen Hanin Co.,Ltd.

Room 305A, Angye Building, Pioneering Park, Torch High- tech, Zone,

Xiamen, China

Manufacturer: Xiamen Hanin Co.,Ltd.

Room 305A, Angye Building, Pioneering Park, Torch High- tech, Zone, Address of manufacturer:

Xiamen, China

**General Description of EUT:** 

Product Name: Print and Apply Labeller

Trade Name: /

Model No.: PA431L-R

Adding Model(s):

Rated Voltage: AC100-240V

Battery Capacity: /
Power Adapter: /

FCC ID: 2AUTE-PA431LR Equipment Type: Fixed device

**Technical Characteristics of EUT:** 

Frequency Range: 917.4-927.2MHz

RF Output Power: 20.32dBm (Conducted)

Modulation: PR-ASK
Quantity of Channels: 50
Channel Separation: 200kHz
Type of Antenna: PCB Antenna
Antenna Gain: -27.1dBi

## 1.2 RF Exposure Exemption

According to §1.1307(b)(3) and KDB 447498 D04 Interim General RF Exposure Guidance v01, system operating under the provisions of this section shall be operating in a manner that the public is not exposed to radio frequency energy level in excess limit for maximum permissible exposure.

**Option A:** FCC Rule Part 1.1307 (b)(3)(i)(A):The available maximum time-averaged power is no more than 1mW, regardless of separation distance.

**Option B:** FCC Rule Part 1.1307 (b)(3)(i)(B): The available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold  $P_{th}$  (mW) described in the following formula.  $P_{th}$  is given by:

$$P_{th} \text{ (mW)} = \begin{cases} ERP_{20 cm} (d/20 \text{ cm})^x & d \le 20 \text{ cm} \\ ERP_{20 cm} & 20 \text{ cm} < d \le 40 \text{ cm} \end{cases}$$

Where

$$x = -\log_{10}\left(\frac{60}{ERP_{20\ cm}\sqrt{f}}\right) \text{ and } f \text{ is in GHz;}$$

and

$$ERP_{20\ cm}\ (\text{mW}) = \begin{cases} 2040f & 0.3\ \text{GHz} \le f < 1.5\ \text{GHz} \\ \\ 3060 & 1.5\ \text{GHz} \le f \le 6\ \text{GHz} \end{cases}$$

d = the separation distance (cm);

**Option C:** FCC Rule Part 1.1307 (b)(3)(i)(C): The minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. R must be at least  $\lambda/2\pi$ , where  $\lambda$  is the free-space operating wavelength in meters.

Single RF Sources Subject to Routine Environmental Evaluation					
RF Source frequency (MHz)	Threshold ERP (watts)				
0.3-1.34	1,920 R <sup>2</sup>				
1.34-30	3,450 R <sup>2</sup> /f <sup>2</sup>				
30-300	3.83 R <sup>2</sup>				
300-1,500	0.0128 R <sup>2</sup> f				
1,500-100,000	19.2R <sup>2</sup>				

### For Multiple RF sources: FCC Rule Part 1.1307(b)(3)(ii):

- (A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required).
- (B) In the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

### 1.3 Calculated Result

Radio	Prediction	Output	Antenna	Duty	Tune-Up	er ERP	
Access	Frequency	Power	Gain	Cycle	Time-Averaged Power		
Technology	(MHz)	(dBm)	(dBi)	(%)	(dBm)	(dBm)	
SRD	917.4	20.32	-27.1	100	21.00	-8.25	

Frequency	Option	Min. Distance	Max.	Power	Exposure Limit	Ratio	Result
(MHz)	Option	(cm)	(dBm)	(mW)	(mW)	Ralio	Pass/Fail
917.4	С	20.00	-8.25	0.15	469.71	0.01	Pass

Note: 1. Time-Averaged Power=Output Power \* Duty Cycle; ERP= Time-Averaged Power+ Antenna gain-2.15dB

- 2. Option A, B and C refers as clause 1.2.
- 3. For option B, Max (time-averaged power, effective radiated power (ERP)) converts to Max. Power. For option C, ERP converts to Max. Power;
- 4. For option B, P<sub>th</sub> (mW) converts to Exposure Limit (mW); For option C, ERP (W) converts to Exposure Limit (mW).
  - 5. Ratio= Tune-Up ERP (mW)/ Exposure Limit (mW)

#### **Mode for Simultaneous Multi-band Transmission:**

Radio Access	Ratio 1	Ratio 2	Simultaneous	Limit	Result
Technology			Ratio		Pass/Fail

Result: Pass
