

## **APPENDIX A: RF EXPOSURE**

### **FCC Rules and Regulations Part 1.1307, 1.1310, 2.1091, 2.1093:**

**THIS DEVICE IS CATEGORICALLY EXCLUDED FROM RF EXPOSURE EVALUATION PER THE TCB EXCLUSION LIST DATED 17 JULY 2002.**

The worst case EIRP was 5.7 W at 154 MHz. Plugging this value into the occupational low threshold equation from the bottom of the TCB exclusion list gives the following:

$$900/f(\text{GHz}) = 900 / 0.154 = 6,000 \text{ mW} = 6 \text{ W}.$$

The power from this radio is below the low threshold. Additionally, this is a PTT radio with a maximum duty cycle of 50%, which would make the margin even greater between the power seen in actual use and the low threshold.
