

Battery Use:

The Camera requires 8 size "AA" batteries whereas the Monitor requires 10 size "C" batteries if powered by battery. Alkaline batteries are recommended for longer viewing time.

Please note:

1. When the battery voltage of the Camera falls below a certain level, the Monitor will receive negative video image which means the batteries should be replaced at this time.
2. If you are using batteries in the Monitor and the Power Indicator turns off or the video image starts to shrink, it's time to change the batteries.
3. Do not mix old and new batteries.
4. Do not mix alkaline, standard or rechargeable batteries.
5. Remove the batteries during long periods of non-use.

Screen On/Off Switch:

This power saving feature is located next to the volume switch setting on the front of the Monitor.

When the Monitor is switched to Screen "Off" position and the Camera is remained power on, there will be no picture on the Monitor screen, the unit is using a small amount of power and is still operational. You can still hear the sound signal captured from the monitoring area. The Monitor will resume working with a clear picture when switch "On" the screen.

2.4 GHz AUDIO/VIDEO MONITOR SYSTEM

SAFETY INSTRUCTIONS

DO NOT EXPOSE THIS PRODUCT TO WATER OR MOISTURE.

CAUTION

RISK OF ELECTRIC
SHOCK DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRICAL SHOCK, DO NOT REMOVE COVER OR BACK. NO SERVICABLE PARTS INSIDE.

The lightning flash with arrowhead, within an equilateral triangle is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure, that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance instructions in the literature accompanying the appliance.

1. READ INSTRUCTIONS: All the operating and safety instructions should be read carefully before the appliance is operated.

2. RETAIN INSTRUCTIONS: The operating and safety instructions should be retained for future reference.

3. HEED WARNINGS: All warnings on the appliance and in the operating instructions should be adhered to.

4. FOLLOW INSTRUCTIONS: All operating and use instructions should be followed.

5. WATER AND MOISTURE: The Weather Sensor Receiver only should be used near water, for example, near a bath tub, wash bowl, kitchen sink, laundry tub in a wet basement, or near a swimming pool, etc.

6. VENTILATION: The appliance should be situated so that its location or position does not interfere with its proper ventilation. For example, the appliance should not be situated in a bed, sofa, rug, or any other surface that may block the ventilation openings, or placed in a built-in cabinet, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.

7. HEAT: The appliance should be situated away from heat sources such as radiators, heat registers, stoves or any other appliances including amplifiers that produce heat.

8. POWER SOURCES: The appliance should be connected to a power supply only of the type described in the operating instructions or as marked on the appliance.

9. IMPORTANT: The following applies only to UL LISTED UNITS. This appliance is being supplied with the newly required safety feature of a Polarized Plug. You will note that one prong is larger than the other so that it fits only one way into the receptacle. DO NOT TAMPER WITH OR DEFECT ITS PURPOSE under any circumstances.

10. POWER CORD PROTECTION: Power supply cords should be routed so they are not likely to be walked on or pinched by items placed upon or against them. Special attention should be placed to cords at plugs, convenience receptacles and at the point where they exit from the appliance.

11. CLEANING: The appliance should be cleaned only as recommended by the manufacturer.

12. NON-USE PERIODS: The power cord of the appliance should be unplugged from the outlet when left unused for a long period of time.

13. OBJECT AND LIQUID ENTRY: Care should be taken so that object do not fall and liquids are not spilled into the enclosure through openings.

14. DAMAGE REQUIRING SERVICE: The appliance should be serviced by qualified service personnel when:

A. The power supply cord or plug has been damaged; or

B. Objects have fallen, or liquid has been spilled into the appliance, or

C. The appliance has been exposed to rain; or

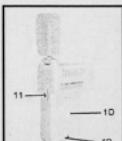

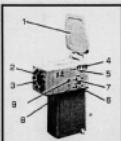

D. The appliance does not appear to operate normally or exhibits a marked change of performance;

E. The appliance has been dropped, or the enclosure damaged.

Units Features

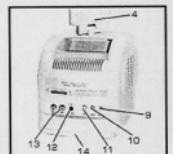

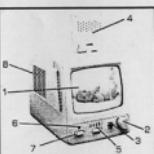

Camera Features

1. Adjustable aerial
2. Infra-red lighting - 4
3. Wide-angle Camera Lens
4. Channel indicators
5. Power indicator
6. Power On/Off switch
7. Infra-red lighting-selector switch
8. Microphone
9. Infrared infra-red indicator
10. Battery cover
11. AC adapter jack
12. Tripod or Wall Mount nut

Monitor Features

1. 5 inches/12.5cm Video Display Screen
2. Volume control
3. Screen On/Off selector switch
4. Adjustable aerial
5. Infra-red lighting-selector switch
6. Power indicator
7. Power On/Off switch
8. Speaker
9. Brightness adjustment knob
10. Contrast adjustment knob
11. V-Hold adjustment knob
12. Infra-red receiver
13. Audio/Video input
14. Battery cover

How To Operate

Channel settings:

The Monitor may pick up signals or display interference from other signal sources including your AV Monitor that broadcast in the 2.4GHz range. If this occurs, you may need to reposition the Monitor to solve the problem. 4 channels are provided for your use. You can simply switch the Camera and Monitor to the other channel until the image and sound are clear.

Preparation:

Regular testing of the video and sound reception of the Sprague AV Monitor is recommended to ensure the best performance of the system. It is also recommended to test the video reception and sound quality in each location in which you intend to use both the Monitor and Camera.

Procedures:

1. To prevent feedback noise, the Monitor is recommended to be placed far enough away from the Camera.
2. Place the Camera in the most appropriate location for monitoring (stairways, hallways, doorways, etc.)
3. Point the Camera Lens toward the area you want to pick up images.
4. Make sure that both units are on the same channel. Check the video reception on the screen of Monitor.
5. Adjust the quality of the picture by using the Contrast, Brightness and V-Hold adjustment knobs on the back of the Monitor.
6. In the event that the video reception is poor, try repositioning of both units to obtain optimal picture transmission.
7. The Infra-red lighting of the Camera is designed to illuminate the Camera area in low light conditions or areas of very low levels of light. Switch them on whenever needed. Please remember that if you intend to use the camera in the dark, it will only monitor objects placed within 6ft/2m of its Infra-red sensor. During the night, turn the Infra-red function to save battery life. To test sound reception quality, place the Camera at least 3ft/1m away from the person to be recorded. Speak in a normal conversational level or place a radio or other sound emitting device in the desired viewing area.
8. If the picture rolls from top to bottom or vice versa, the V-Hold control located on the back of the Monitor needs to be adjusted.
9. Once you have set up the camera and the picture displayed on the screen you can adjust the brightness and contrast by using the controls on the back of the Monitor until you achieve the desired result.
