Why is there a notification on my phone but not on my bracelet? Answer: 1. Check whether the message in the phone notification bar can be displayed normally. 2. If the message is not displayed, please turn off the watch and then turn it on again. 3. If the message is still not displayed, please turn off the watch and then turn it on again. 2. How is the weather forecast temperature updated? Answer: 1. Check whether the message in the phone notification bar can be displayed normally. 2. If the message is not displayed, please turn off the watch and then turn it on again. 3. If the message is still not displayed, please turn off the watch and then turn it on again. 3. Why does my watch not receive my messages when the message is pushed? Answer: 1. Check whether the message in the phone notification bar can be displayed normally. 2. If the message is not displayed, please turn off the watch and then turn it on again. 4. How do I use the music controls? Answer: 1. Connect the watch to the phone via Bluetooth. Turn on the music player on the phone, play the music from the download, press the left and right buttons to switch in the music. 2. The device is always connected to the Bluetooth of the cell phone. If the device is disconnected, but the Android phone system memory management will force it to turn off the connection. If the connection is forced to turn off, you can turn on the connection again. If the phone comes with a music player that does not support QI music playback, you can use the music player on the phone to play music. 5. Charging for a period of time the device does not turn on? Answer: 1. Check whether the watch is charged enough. If the watch is not charged enough, please use the QI power charge to charge for about half an hour to activate, and then turn on the watch. If the watch is still not turned on, please turn off the watch and then turn it on again. 6. Is the watch screen function in APP is turned off? Answer: Please check whether the working screen function in APP is turned off and whether the screen of the bound bracelet. If it is not, please check whether there is a "Device" page in the "Device" page of APP, open the "Virtual & Screen", and the time period to send the message to the watch is set to "10 minutes". If the time period is set to "10 minutes", please do not worry. Please make sure that you have allowed the sharing of the system settings of the watch. If the system settings of the watch are not shared, when the above settings are not a problem, try to restart the phone (Bluetooth to see if the message can be sent normally).</p> <p>7. Share device? Answer: 1. Check whether the watch is bound to the phone. If it is not bound to the phone, you can go to the "Device" page of the APP to bind the watch to the phone. The rest of the power shaker and other functions will increase the power consumption, resulting in the death of the device.</p>
