## Dipole Validation Kit

Type: D5GHzV2

Serial: 1020

Manufactured: February 5, 2004

Calibrated: February 23, 2004

---

**UL Apex Co., Ltd.**

**Head Office EMC Lab.**

4383-326 Asama-cho, Ise-shi, Mie-ken 516-0021 JAPAN

Telephone: +81 596 24 8116

Facsimile: +81 596 24 8124

## 1. Measurement Conditions

The measurements were performed in the flat section of the SAM twin phantom filled with **head simulating solution** of the following electrical parameters:

Frequency:	<b>5200 MHz</b>
Relative Dielectricity	<b>36.3</b> $\pm$ 5%
Conductivity	<b>4.57 mho/m</b> $\pm$ 5%
Frequency:	<b>5800 MHz</b>
Relative Dielectricity	<b>35.4</b> $\pm$ 5%
Conductivity	<b>5.20 mho/m</b> $\pm$ 5%

The DASY4 System with a dosimetric E-field probe EX3DV3 - SN:3503 was used for the measurements. The dipole was mounted on the small tripod so that the dipole feedpoint was positioned below the center marking of the flat phantom section and the dipole was oriented parallel to the body axis (the long side of the phantom). The standard measuring distance was 10mm from dipole center to the solution surface. Lossless spacer was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 10mm was aligned with the dipole. Special 8x8x8 fine cube was chosen for cube integration ( $dx=dy=4.3\text{mm}$ ,  $dz=3\text{mm}$ ). Distance between probe sensors and phantom surface was set to 2.5 mm. The dipole input power (forward power) was  $250\text{ mW} \pm 3\%$ . The results are normalized to 1W input power.

## 2. SAR Measurement with DASY System

Standard SAR-measurements were performed according to the measurement conditions described in section 1. The results (see figures supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured at **5200 MHz (Head Tissue)** with the dosimetric probe EX3DV3 SN:3503 and applying the advanced extrapolation are:

averaged over  $1\text{ cm}^3$  (1 g) of tissue: **87.6 mW/g**  $\pm 20.3\%$  ( $k=2$ )<sup>1</sup>

averaged over  $10\text{ cm}^3$  (10 g) of tissue: **24.5 mW/g**  $\pm 19.8\%$  ( $k=2$ )<sup>1</sup>

The resulting averaged SAR-values measured at **5800 MHz (Head Tissue)** with the dosimetric probe EX3DV3 SN:3503 and applying the advanced extrapolation are:

averaged over  $1\text{ cm}^3$  (1 g) of tissue: **86.8 mW/g**  $\pm 20.3\%$  ( $k=2$ )<sup>2</sup>

averaged over  $10\text{ cm}^3$  (10 g) of tissue: **24.2 mW/g**  $\pm 19.8\%$  ( $k=2$ )<sup>2</sup>

<sup>1</sup> Target dipole values determined by FDTD (feedpoint impedance set to 50 Ohm). The values are SAR\_1g=76.5 mW/g, SAR\_10g=21.6 mW/g and SAR\_peak=310.3 mW/g.

<sup>2</sup> Target dipole values determined by FDTD (feedpoint impedance set to 50 Ohm). The values are SAR\_1g=78.0 mW/g, SAR\_10g=21.9 mW/g and SAR\_peak=340.9 mW/g.

### **3. Dipole Transformation Parameters**

The impedance was measured at the SMA-connector with a network analyzer and numerically transformed to the dipole feedpoint (please refer to the graphics attached to this document). The transformation parameters from the SMA-connector to the dipole feedpoint are:

Electrical delay: **1.200 ns** (one direction)  
Transmission factor: **0.974** (voltage transmission, one direction)

### **4. Measurement Conditions**

The measurements were performed in the flat section of the SAM twin phantom filled with **body simulating solution** of the following electrical parameters:

Frequency:	<b>5200 MHz</b>
Relative Dielectricity	<b>49.7</b> $\pm$ 5%
Conductivity	<b>5.18 mho/m</b> $\pm$ 5%
Frequency:	<b>5800 MHz</b>
Relative Dielectricity	<b>48.5</b> $\pm$ 5%
Conductivity	<b>6.01 mho/m</b> $\pm$ 5%

The DASY3 System with a dosimetric E-field probe EX3DV3 - SN:3503 was used for the measurements. The dipole was mounted on the small tripod so that the dipole feedpoint was positioned below the center marking of the flat phantom section and the dipole was oriented parallel to the body axis (the long side of the phantom). The standard measuring distance was 10mm from dipole center to the solution surface. Lossless spacer was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 10mm was aligned with the dipole. The 8x8x8 fine cube was chosen for cube integration ( $dx=dy=4.3mm$ ,  $dz=3mm$ ). Distance between probe sensors and phantom surface was set to 2.5 mm. The dipole input power (forward power) was  $250\text{ mW} \pm 3\%$ . The results are normalized to  $1\text{ W}$  input power.

## **5. SAR Measurement with DASY System**

Standard SAR-measurements were performed according to the measurement conditions described in section 4. The results (see figures supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured at **5200 MHz (Body Tissue)** with the dosimetric probe EX3DV3 SN:3503 and applying the advanced extrapolation are:

averaged over 1 cm<sup>3</sup> (1 g) of tissue: **82.0 mW/g** ± 20.3 % (k=2)<sup>3</sup>

averaged over 10 cm<sup>3</sup> (10 g) of tissue: **23.0 mW/g** ± 19.8 % (k=2)<sup>3</sup>

The resulting averaged SAR-values measured at **5800 MHz (Body Tissue)** with the dosimetric probe EX3DV3 SN:3503 and applying the advanced extrapolation are:

averaged over 1 cm<sup>3</sup> (1 g) of tissue: **78.4 mW/g** ± 20.3 % (k=2)<sup>4</sup>

averaged over 10 cm<sup>3</sup> (10 g) of tissue: **21.5 mW/g** ± 19.8 % (k=2)<sup>4</sup>

## **6. Handling**

Do not apply excessive force to the dipole arms, because they might bend. Bending of the dipole arms stresses the soldered connections near the feedpoint leading to a damage of the dipole.

## **7. Design**

The dipole is made of standard semirigid coaxial cable. The center conductor of the feeding line is directly connected to the second arm of the dipole. The antenna is therefore short-circuited for DC-signals.

Small end caps have been added to the dipole arms in order to increase frequency bandwidth at the position as explained in Sections 1 and 4.

## **8. Power Test**

After long term use with 40W radiated power, only a slight warming of the dipole near the feedpoint can be measured.

---

<sup>3</sup> Target dipole values determined by FDTD (feedpoint impedance set to 50 Ohm). The values are SAR\_1g=71.8 mW/g, SAR\_10g=20.1 mW/g and SAR\_peak=284.7 mW/g.

<sup>4</sup> Target dipole values determined by FDTD (feedpoint impedance set to 50 Ohm). The values are SAR\_1g=74.1 mW/g, SAR\_10g=20.5 mW/g and SAR\_peak=324.7 mW/g.

## CALIBRATION CERTIFICATE

Object	ESD04 - SH3540		
Calibration procedure(s)	QA CAL-DV4 Calibration procedure for desmotic E-field probes		
Calibration date:	January 14, 2005		
Condition of the calibrated item	In Tolerance		
This calibration certificate documents the traceability to national standards, which realize the physical units of measurements (SI). The measurements and the uncertainties with confidence probability are given on the following pages and are part of the certificate.			
All calibrations have been conducted in the closed laboratory facility: environment temperature ( $22 \pm 3$ )°C and humidity < 70%.			
Calibration Equipment used (M&TE critical for calibration)			
Primary Standards	ID #	Cal Date (Calibrated by, Certificate No.)	Scheduled Calibration
Power meter E4419B	GB41293874	5-May-04 (METAS, No. 251-00388)	May-05
Power sensor E4412A	MY41495277	5-May-04 (METAS, No. 251-00388)	May-05
Reference 3 dB Attenuator	SN: S5054 (3c)	10-Aug-04 (METAS, No. 251-00403)	Aug-05
Reference 20 dB Attenuator	SN: S5086 (20b)	3-May-04 (METAS, No. 251-00389)	May-05
Reference 30 dB Attenuator	SN: S5129 (30b)	10-Aug-04 (METAS, No. 251-00404)	Aug-05
Reference Probe ES3DV2	SN: 3013	7-Jan-05 (SPEAG, No. ES3-3013_Jan05)	Jan-06
DAE4	SN: 617	29-Sep-04 (SPEAG, No. DAE4-617_Sep04)	Sep-05
Secondary Standards	ID #	Check Date (in house)	Scheduled Check
Power sensor HP 8481A	MY41092180	18-Sep-02 (SPEAG, in house check Oct-03)	In house check: Oct 05
RF generator HP 8648C	US3642U01700	4-Aug-99 (SPEAG, in house check Dec-03)	In house check: Dec-05

**S** Swiss Calibration Service

Accredited by the Swiss Federal Office of Metrology and Accreditation  
 The Swiss Accreditation Service is one of the signatories to the EA  
 Multilateral Agreement for the recognition of calibration certificates

Accreditation No.: **SCS 108****Glossary:**

TSL	tissue simulating liquid
NORM $x,y,z$	sensitivity in free space
ConvF	sensitivity in TSL / NORM $x,y,z$
DCP	diode compression point
Polarization $\phi$	$\phi$ rotation around probe axis
Polarization $\theta$	$\theta$ rotation around an axis that is in the plane normal to probe axis (at measurement center), i.e., $\theta = 0$ is normal to probe axis

**Calibration Is Performed According to the Following Standards:**

- a) IEEE Std 1528-2003, "IEEE Recommended Practice for Determining the Peak Spatial-Averaged Specific Absorption Rate (SAR) in the Human Head from Wireless Communications Devices: Measurement Techniques", December 2003
- b) CENELEC EN 50361, "Basic standard for the measurement of Specific Absorption Rate related to human exposure to electromagnetic fields from mobile phones (300 MHz - 3 GHz)", July 2001

**Methods Applied and Interpretation of Parameters:**

- **NORM $x,y,z$ :** Assessed for E-field polarization  $\theta = 0$  ( $f \leq 900$  MHz in TEM-cell;  $f > 1800$  MHz: R22 waveguide). NORM $x,y,z$  are only intermediate values, i.e., the uncertainties of NORM $x,y,z$  does not effect the E<sup>2</sup>-field uncertainty inside TSL (see below ConvF).
- **NORM( $f$ ) $x,y,z = NORMx,y,z * frequency\_response$**  (see Frequency Response Chart). This linearization is implemented in DASY4 software versions later than 4.2. The uncertainty of the frequency response is included in the stated uncertainty of ConvF.
- **DCPx,y,z:** DCP are numerical linearization parameters assessed based on the data of power sweep (no uncertainty required). DCP does not depend on frequency nor media.
- **ConvF and Boundary Effect Parameters:** Assessed in flat phantom using E-field (or Temperature Transfer Standard for  $f \leq 800$  MHz) and inside waveguide using analytical field distributions based on power measurements for  $f > 800$  MHz. The same setups are used for assessment of the parameters applied for boundary compensation (alpha, depth) of which typical uncertainty values are given. These parameters are used in DASY4 software to improve probe accuracy close to the boundary. The sensitivity in TSL corresponds to NORM $x,y,z * ConvF$  whereby the uncertainty corresponds to that given for ConvF. A frequency dependent ConvF is used in DASY 4.3 B17 and higher which allows extending the validity from  $\pm 50$  MHz to  $\pm 100$  MHz.
- **Spherical isotropy (3D deviation from isotropy):** in a field of low gradients realized using a flat phantom exposed by a patch antenna.
- **Sensor Offset:** The sensor offset corresponds to the offset of virtual measurement center from the probe tip (on probe axis). No tolerance required.

EX3DV4 SN:3540

January 14, 2005

# Probe EX3DV4

## SN:3540

Manufactured: August 23, 2004  
Calibrated: January 14, 2005

**Calibrated for DASY Systems**

(Note: non-compatible with DASY2 system!)

EX3DV4 SN:3540

January 14, 2005

## DASY - Parameters of Probe: EX3DV4 SN:3540

### Sensitivity in Free Space<sup>A</sup>

NormX	<b>0.47</b> ± 10.1%	µV/(V/m) <sup>2</sup>
NormY	<b>0.54</b> ± 10.1%	µV/(V/m) <sup>2</sup>
NormZ	<b>0.49</b> ± 10.1%	µV/(V/m) <sup>2</sup>

### Diode Compression<sup>B</sup>

DCP X	<b>92</b> mV
DCP Y	<b>92</b> mV
DCP Z	<b>92</b> mV

### Sensitivity in Tissue Simulating Liquid (Conversion Factors)

Please see Page 9.

### Boundary Effect

TSL            900 MHz      Typical SAR gradient: 5 % per mm

Sensor Center to Phantom Surface Distance	2.0 mm	3.0 mm
SAR <sub>be</sub> [%]      Without Correction Algorithm	3.5	1.3
SAR <sub>be</sub> [%]      With Correction Algorithm	0.2	0.5

TSL            1810 MHz      Typical SAR gradient: 10 % per mm

Sensor Center to Phantom Surface Distance	2.0 mm	3.0 mm
SAR <sub>be</sub> [%]      Without Correction Algorithm	4.4	2.5
SAR <sub>be</sub> [%]      With Correction Algorithm	1.0	0.6

### Sensor Offset

Probe Tip to Sensor Center      **1.0** mm

The reported uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k=2, which for a normal distribution corresponds to a coverage probability of approximately 95%.

<sup>A</sup> The uncertainties of NormX,Y,Z do not affect the E<sup>2</sup>-field uncertainty inside TSL (see Page 9).

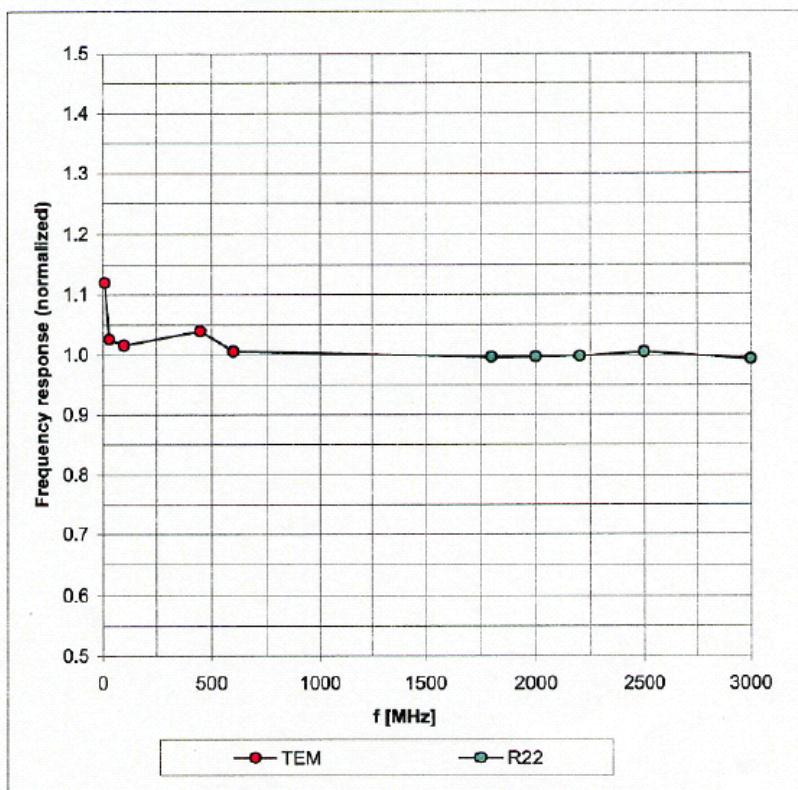

<sup>B</sup> Numerical linearization parameter: uncertainty not required.

EX3DV4 SN:3540

January 14, 2005

## Frequency Response of E-Field

(TEM-Cell:ifi110 EXX, Waveguide: R22)

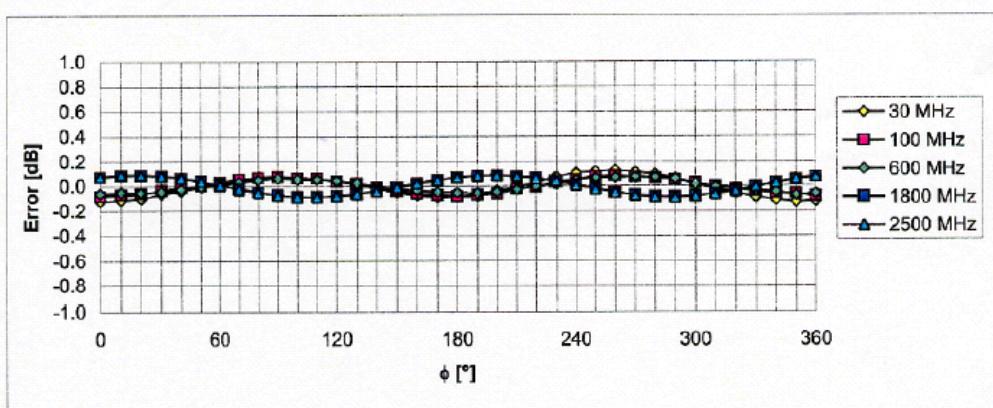

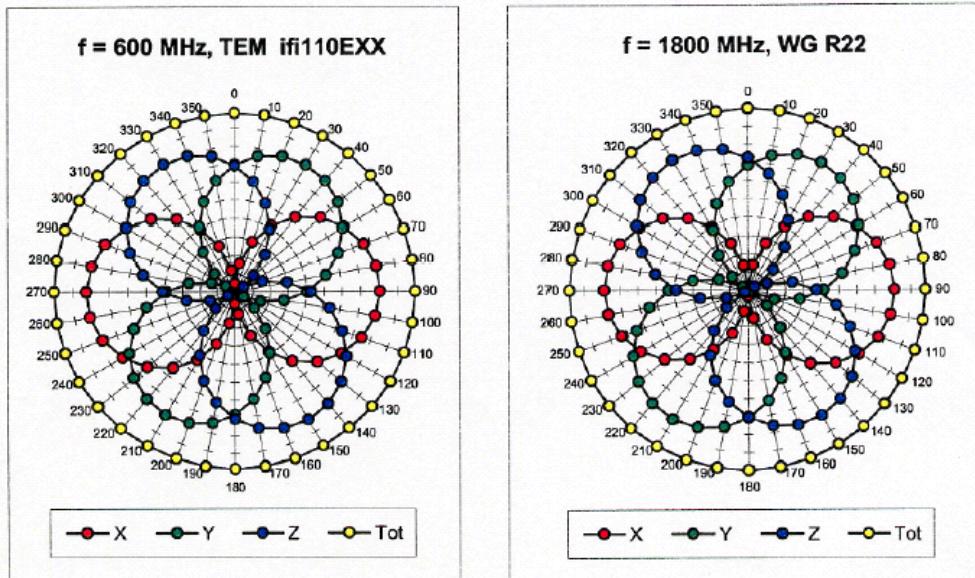

Uncertainty of Frequency Response of E-field:  $\pm 6.3\% (k=2)$

EX3DV4 SN:3540

January 14, 2005

### Receiving Pattern ( $\phi$ ), $\theta = 0^\circ$

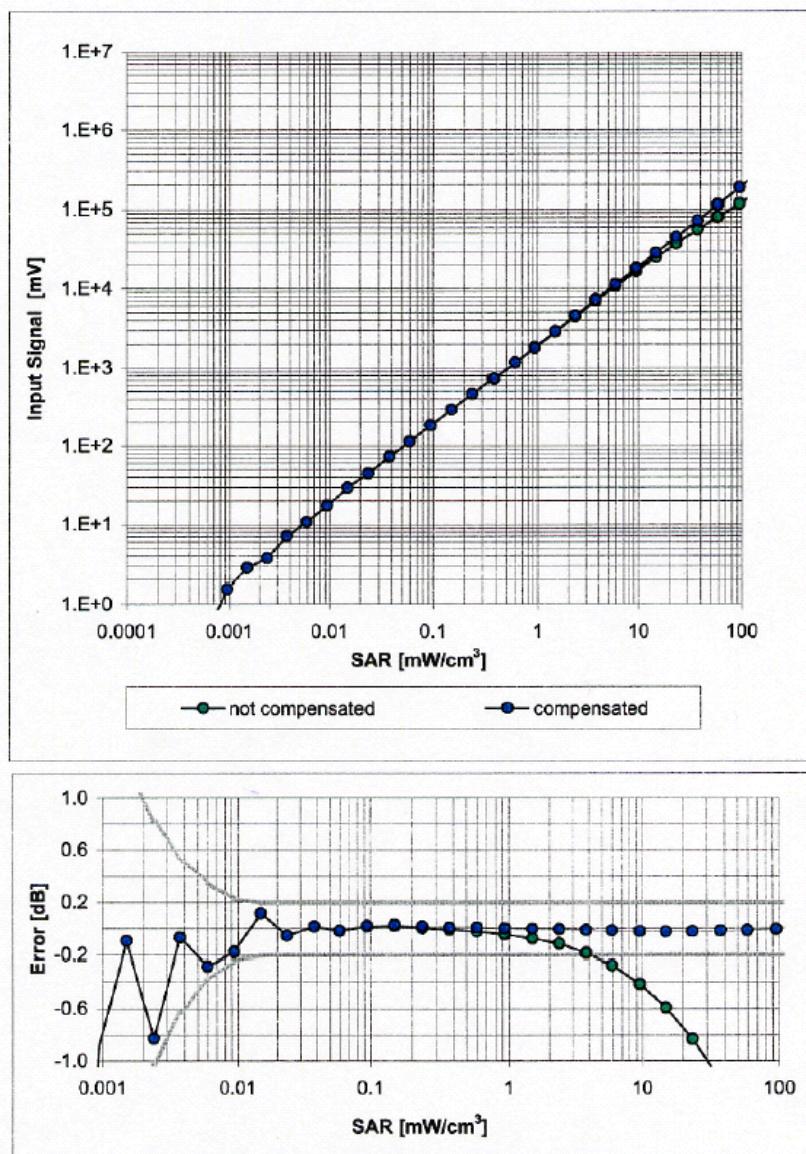

Uncertainty of Axial Isotropy Assessment:  $\pm 0.5\%$  ( $k=2$ )

EX3DV4 SN:3540

January 14, 2005

**Dynamic Range f(SAR<sub>head</sub>)**  
(Waveguide R22, f = 1800 MHz)

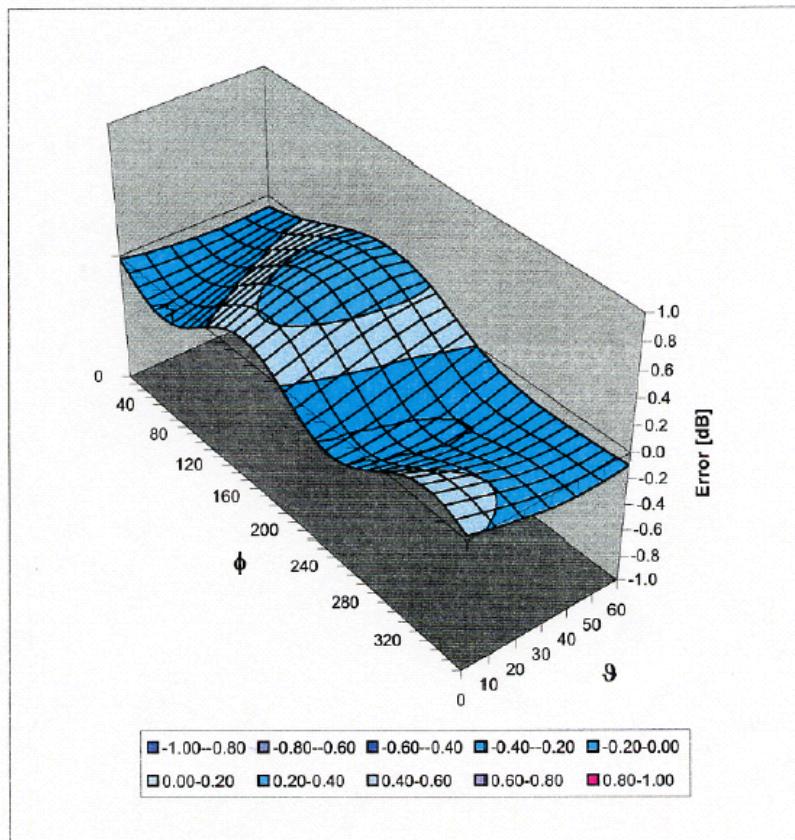

Uncertainty of Linearity Assessment:  $\pm 0.6\%$  ( $k=2$ )

EX3DV4 SN:3540

January 14, 2005

## Deviation from Isotropy in HSL

Error ( $\phi, \theta$ ), f = 900 MHz

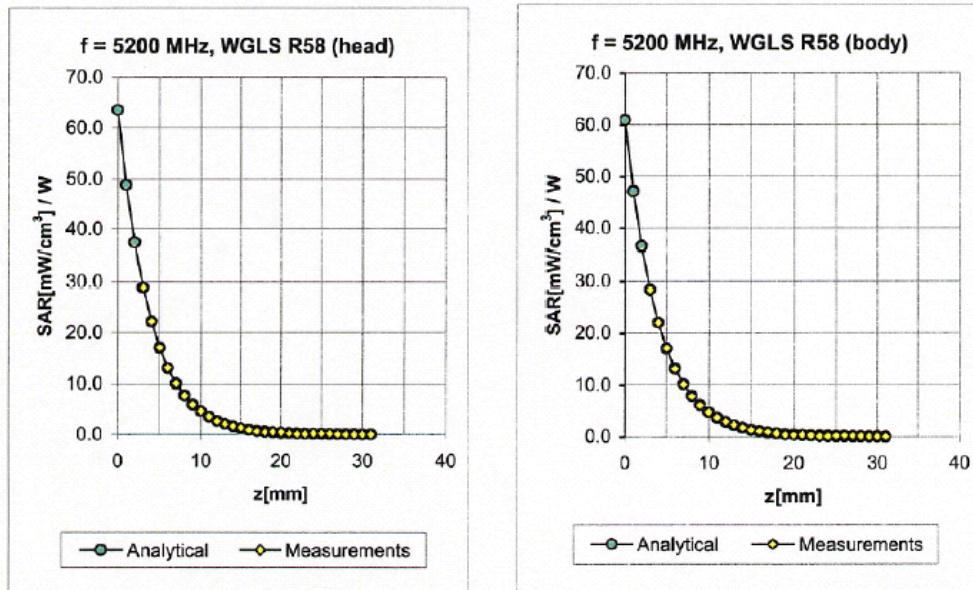

Uncertainty of Spherical Isotropy Assessment:  $\pm 2.6\%$  (k=2)

EX3DV4 SN:3540

January 14, 2005

## Appendix<sup>D</sup>

f [MHz] <sup>D</sup>	Validity [MHz]	TSL	Permittivity	Conductivity	Alpha	Depth	ConvF	Uncertainty
5200	$\pm 50$	Head	$36.0 \pm 5\%$	$4.76 \pm 5\%$	0.45	1.80	4.79	$\pm 13.6\% \text{ (k=2)}$
5800	$\pm 50$	Head	$35.3 \pm 5\%$	$5.27 \pm 5\%$	0.45	1.80	4.34	$\pm 13.6\% \text{ (k=2)}$
5200	$\pm 50$	Body	$49.0 \pm 5\%$	$5.30 \pm 5\%$	0.45	1.90	4.40	$\pm 13.6\% \text{ (k=2)}$
5800	$\pm 50$	Body	$48.2 \pm 5\%$	$6.00 \pm 5\%$	0.43	1.90	4.06	$\pm 13.6\% \text{ (k=2)}$

<sup>D</sup> Accreditation for ConvF assessment above 3000 MHz is currently applied for. Accreditation is expected at the beginning of 2005.
