Assessment Report

REP018212-1ARWL

Type of assessment:

MPE Calculation report

Manufacturer: SOLiD

Product Marketing Name (PMN): MRDU-1900P

FCC ID: W6UHM1900PE Model:

MRDU_1900P_E;

HVIN/Model variant(s): N/A

ISED certification number: 9354A-HM1900PE

Specification:

- FCC 47 CFR Part 1 Subpart I, §§1.1307, 1.1310
- FCC 47 CFR Part 2 Subpart J, §2.1091
- FCC KDB 447498 D01 General RF Exposure Guidance v06
- ISED Canada RSS-102 Issue 5 Amendment 1, (February 2021)

RSS-102 Annex B - Declaration of RF Exposure Compliance

ATTESTATION: I attest that the information provided in Annex A is correct; that the Technical Brief was prepared, and the information contained therein is correct; that the device evaluation was performed or supervised by me; that applicable measurement methods and evaluation methodologies have been followed; and that the device meets the SAR and/or RF field strength limits of RSS-102.

Date of issue: July 17, 2024

James Cunningham, EMC/WL Manager

Section 1 Evaluation summary

1.1 MPE calculation for standalone transmission

1.1.1 References, definitions, and limits

FCC §2.1091(d)

(2) For operations within the frequency range of 300 kHz and 6 GHz (inclusive), the limits for maximum permissible exposure (MPE), derived from whole-body SAR limits and listed in Table 1 in paragraph (e)(1) of this section, may be used instead of whole-body SAR limits as set forth in paragraphs (a) through (c) of this section to evaluate the environmental impact of human exposure to RF radiation as specified in §1.1307(b) of this part, except for portable devices as defined in §2.1093 of this chapter as these evaluations shall be performed according to the SAR provisions in §2.1093.

| Frequency range | Electric field strength | Magnetic field strength | Power density | Averaging time |
|-----------------|-------------------------|---------------------------------|--------------------------|----------------|
| (MHz) | (V/m) | (A/m) | (mW/cm²) | (minutes) |
| | (i) Limits | for Occupational/Controlled Exp | osure | |
| 0.3–3.0 | 614 | 1.63 | *(100) | ≤6 |
| 3.0–30 | 1842 / f | 4.89 / f | *(900 / f ²) | <6 |
| 30–300 | 61.4 | 0.163 | 1.0 | <6 |
| 300-1500 | | | f / 300 | <6 |
| 1500-100000 | | | 5 | <6 |
| | (ii) Limits for | General Population/Uncontrolled | l Exposure | |
| 0.3–1.34 | 614 | 1.63 | *(100) | <30 |
| 1.34–30 | 824 / f | 2.19 / f | *(180 / f ²) | <30 |
| 30–300 | 27.5 | 0.073 | 0.2 | <30 |
| 300-1500 | | | f/1500 | <30 |
| 1500-100000 | | | 1.0 | <30 |

Notes: f = frequency in MHz. * = Plane-wave equivalent power density.

RSS-102, Section 2.5.2

RF exposure evaluation is required if the separation distance between the user and/or bystander and the device's radiating element is greater than 20 cm, except when the device operates as follows:

- below 20 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 1 W (adjusted for tuneup tolerance);
- at or above 20 MHz and below 48 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 4.49/f^{0.5} W (adjusted for tune-up tolerance), where f is in MHz;
- at or above 48 MHz and below 300 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 0.6 W (adjusted for tune-up tolerance);
- at or above 300 MHz and below 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 0.0131 f^{0.6834} W (adjusted for tune-up tolerance), where f is in MHz;
- at or above 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 5 W (adjusted for tune-up tolerance).

In these cases, the information contained in the RF exposure technical brief may be limited to information that demonstrates how the e.i.r.p. was derived.

Equation from page 18 of OET Bulletin 65, Edition 97-01

$$S = \frac{PG}{4\pi R^2}$$

where: S = power density (mW/cm² or W/m²)

- P = power input to the antenna (mW or W)
- G = power gain of the antenna in the direction of interest relative to an isotropic radiator
- R = distance to the center of radiation of the antenna (cm or m)

1.1.2 EUT technical information

| Prediction frequency | 1995 MHz |
|-------------------------------------|-----------------------------|
| Antenna type | None |
| Antenna gain | 0 dBi |
| Maximum transmitter conducted power | 37 dBm (5 W) |
| Prediction distance | 20 cm (FCC) 80 cm (ISED) |

1.1.3 MPE calculation

| Fundamental transmit (prediction) frequency: | 1995 | MHz | | |
|---|---|--|--|--|
| Maximum measured conducted peak output power: | 37 | dBm | | |
| Cable and/or jumper loss: | 0 | dB | | |
| Maximum peak power at antenna input terminal: | 37 | dBm | | |
| Tx On time: | 1.000 | ms | | |
| Tx period time: | 1.000 | ms | | |
| Average factor: | 100 | % | | |
| Maximum calculated average power at antenna input terminal: | 5011.872336 | mW | | |
| Single Antenna gain (typical): | 0 | dBi | | |
| Number of antennae: | 1 | | | |
| Total system gain: | 0.00 | dBi | | |
| | | | | |

1.1.4 Verdict

The calculation is below the limit; therefore, the product is passing the RF Exposure requirements for the declared distance.
